

# XGB FEnet I/F Module

User's Manual

XBL-EMTA

## Safety Instructions

- Read this manual carefully before installing, wiring, operating, servicing or inspecting this equipment.
- Keep this manual within easy reach for quick reference.

## **Before using the product ...**

For your safety and effective operation, please read the safety instructions thoroughly before using the product.

- ▶ Safety Instructions should always be observed in order to prevent accident or risk with the safe and proper use the product.
- ▶ Instructions are divided into “Warning” and “Caution”, and the meaning of the terms is as follows.

### **⚠ Warning**

This symbol indicates the possibility of serious injury or death if some applicable instruction is violated

### **⚠ Caution**

This symbol indicates the possibility of severe or slight injury, and property damages if some applicable instruction is violated

Moreover, even classified events under its caution category may develop into serious accidents relying on situations. Therefore we strongly advise users to observe all precautions properly just like warnings.

- ▶ The marks displayed on the product and in the user's manual have the following meanings.

 Be careful! Danger may be expected.

 Be careful! Electric shock may occur.

- ▶ The user's manual even after read shall be kept available and accessible to any user of the product.

### Safety Instructions for design process

#### Warning

- ▶ Please install a protection circuit on the exterior of PLC so that the whole system may operate safely regardless of failures from external power or PLC. Any abnormal output or operation from PLC may cause serious problems to safety in whole system.
  - Install protection units on the exterior of PLC like an interlock circuit that deals with opposite operations such as emergency stop, protection circuit, and forward/reverse rotation or install an interlock circuit that deals with high/low limit under its position controls.
  - If any system error (watch-dog timer error, module installation error, etc.) is detected during CPU operation in PLC, all output signals are designed to be turned off and stopped for safety. However, there are cases when output signals remain active due to device failures in Relay and TR which can't be detected. Thus, you are recommended to install an addition circuit to monitor the output status for those critical outputs which may cause significant problems.
- ▶ Never overload more than rated current of output module nor allow to have a short circuit. Over current for a long period time may cause a fire .

## Safety Instructions for design process

### Caution

- ▶ I/O signal or communication line shall be wired at least 100mm away from a high-voltage cable or power line. Fail to follow this

## Safety Instructions on installation process

### Caution

- ▶ Use PLC only in the environment specified in PLC manual or general standard of data sheet. If not, electric shock, fire, abnormal operation of the product may be caused.
- ▶ Before install or remove the module, be sure PLC power is off. If not, electric shock or damage on the product may be caused.
- ▶ Be sure that every module is securely attached after adding a module or an extension connector. If the product is installed loosely or incorrectly, abnormal operation, error or dropping may be caused. In addition, contact failures under poor cable installation will be causing malfunctions as well.
- ▶ Be sure that screws get tighten securely under vibrating environments. Fail to do so will put the product under direct vibrations which will cause electric shock, fire and abnormal operation.

## Safety Instructions for wiring process

### ⚠ Warning

- ▶ Prior to wiring works, make sure that every power is turned off. If not, electric shock or damage on the product may be caused.
- ▶ After wiring process is done, make sure that terminal covers are

### ⚠ Caution

- ▶ Check rated voltages and terminal arrangements in each product prior to its wiring process. Applying incorrect voltages other than rated voltages and disarrangement among terminals may cause fire or malfunctions.
- ▶ Secure terminal screws tightly applying with specified torque. If the screws get loose, short circuit, fire or abnormal operation may be caused. Securing screws too tightly will cause damages to the module or malfunctions, short circuit, and dropping.
- ▶ Be sure to earth to the ground using Class 3 wires for FG terminals which is exclusively used for PLC. If the terminals not grounded correctly, abnormal operation or electric shock may be caused.
- ▶ Don't let any foreign materials such as wiring waste inside the module while wiring, which may cause fire, damage on the product or abnormal operation.

## Safety Instructions for test-operation and maintenance

### ⚠ Warning

- ▶ **Don't touch the terminal when powered.** Electric shock or abnormal operation may occur.
- ▶ **Prior to cleaning or tightening the terminal screws, let all the external power off including PLC power.** If not, electric shock or abnormal operation may occur.

### ⚠ Caution

- ▶ **Do not make modifications or disassemble each module.** Fire, electric shock or abnormal operation may occur.
- ▶ **Prior to installing or disassembling the module, let all the external power off including PLC power.** If not, electric shock or abnormal operation may occur.
- ▶ **Keep any wireless equipment such as walkie-talkie or cell phones at least 30cm away from PLC.** If not, abnormal operation may be caused.
- ▶ **When making a modification on programs or using run to modify functions under PLC operations, read and comprehend all contents in the manual fully.** Mismanagement will cause damages to products and accidents.

## Safety Instruction

### Safety Instructions for waste disposal

#### Caution

- ▶ Product or battery waste shall be processed as industrial waste. The waste may discharge toxic materials or explode itself.

## About The User's Manual

Congratulations on purchasing PLC from IMO Precision Controls Ltd.

Before use, be sure to read carefully and understand the PLC functions, performance, installation and programming in order to use correctly. It is important to also provide the End User / Maintenance Administrator with a copy of this The User's Manual.

The User's Manual describes the product functionality and provides basic instruction for installation, wiring and programming. For additional information you may connect our website (<http://www.imopc.com/>) and download other manuals as PDF files.

# Chapter 1 General

## 1.1 Before Reading This Manual

This manual includes specifications, installations and various services for Fast Ethernet Interface Module of XGB Ethernet PLC (Hereafter, referred to as **XGB Fast Enet I/F module**, 100Mbps). Ethernet is one of technical standards of IEEE. It provides HS data communication on the base of CSMA/CD network.

XGB Fast Enet I/F module is an interface module for data communication between PC devices by using the electrical media (10/100BASE-TX, 100BASE-FX).

## 1.2 Before Using This Device

### 1.2.1 Relevant user manuals

Refer to below user manuals for writing program.

- (1) XGT PLC Instruction and Programming manual
- (2) XG5000 manual
- (3) XGB series manual

### 1.2.2 Version Information

XGB series Fast Enet I/F module (XBL-EMTA) is suitable to following versions.

- (1) XG5000 programming tool: above Ver 2.0
- (2) XG-PD: above Ver 2.0
- (3) XGB CPU: above Ver 1.4

## 1.3 Characteristics

XGB Fast Enet I/F module provides its services for ARP, ICMP, TCP/IP and UDP/IP protocol and includes following characteristics.

### 1.3.1 XGB Fast Ethernet I/F module characteristics

- (1) Ethernet II, IEEE 802.3 standard functions
- (2) HS link function for HS data communication between IMO modules
  - (a) Communication dedicated parameter setting program (XG-PD)
  - (b) Send data Max. 32 blocks x 200 words, Receive data, Max. 64 block x 200 words, Send-Receive Max. 64 blocks x 200 words)
- (3) HS link and communication is available with Max. 4 modules (Dedicated communication + P2P communication)
- (4) **Loader service** by Enet (XG5000): (Dedicated TCP/IP PORT: 2002 assignment)
- (5) Connection to other system is available through P2P communication and XG-PD
  - (Variable READ/WRITE services (Dynamic Connection function))

- (6) Auto/10/100BASE-TX media service
- (7) Various communication functions
  - (a) System connection by using public network
  - (b) IMO protocol (XGT) and other company protocol (Modbus TCP/IP) (dedicated service)
  - (c) Simple client function for the communication between IMO communication module and other company communication module (XGT, Modbus TCP, user define P2P client function)
  - (d) Host enable table for Upper PC (MMI) and communication protection
  - (e) Dynamic Connection/Disconnection function by using P2P service
- (8) Various diagnosis functions, module and network condition information
  - (a) CPU module condition
  - (b) Communication module condition
  - (c) Communication service (HS rink, main service, P2P) condition
  - (d) PING function to check the existence of other module
  - (e) Packet types and minute packet reception rate to IMO communication module (it predicts network load)
  - (f) Diagnosis function for communication module by network

### 1.3.2 Designation

XGB Fast Enet I/F module designates as below.

Designation	Description	Remark
XBL-EMTA	10/100BASE-TX	Over category 5, UTP cable

[Table 1-1] XBL-EMTA Designation

### 1.3.3 Max. modules can be installed

XGB series can be installed max. 2 communication modules.

Series	Max. modules can be installed
XGB	2

[Table 1-2] Max. modules can be installed

### 1.3.4 Relevant software

Essential programming tools and other configuration software for using XGB Fast Enet I/F module is as followings.  
Refer to followings and apply this suggestion for the right program and communication.

Designation	Programming Tool	Communication Setting Tool
XBL-EMTA	XG5000 (above Ver. 2.0 )	XG-PD (above Ver. 2.0)

[Table 1-3] Relevant software

#### Remark

- 1) Download and usage of upper program is available at <http://www.imopc.com> or this program installation CD's can be provided by IMO distributors.
- 2) Programming for XG5000 and XG-PD is available by using Basic unit **loader port** and refer to cables from the wiring diagram of relevant Basic unit.

## Chapter 2 Specifications

### Chapter 2 Specifications

#### 2.1 General Specifications

[Table 2-1] shows general specification of XGB series.

No.	Items	Specifications			Related standards	
1	Ambient temperature	0 ~ 55 °C				
2	Storage temperature	-25 ~ +70 °C				
3	Ambient humidity	5 ~ 95%RH (Non-condensing)				
4	Storage humidity	5 ~ 95%RH (Non-condensing)				
5	Vibration resistance	Occasional vibration			-	
		Frequency	Acceleration	Amplitude	times	
		10 ≤ f < 57Hz	-	0.075mm	10 times each directions (X, Y and Z)	
		57 ≤ f ≤ 150Hz	9.8m/s <sup>2</sup> (1G)	-		
		Continuous vibration				
		Frequency	Acceleration	Amplitude		
		10 ≤ f < 57Hz	-	0.035mm		
		57 ≤ f ≤ 150Hz	4.9m/s <sup>2</sup> (0.5G)	-		
6	Shock resistance	<ul style="list-style-type: none"> <li>Peak acceleration: 147 m/s<sup>2</sup>(15G)</li> <li>Duration: 11ms</li> <li>Half-sine, 3 times each direction per each axis</li> </ul>			IEC61131-2	
7	Noise resistance	Square wave Impulse noise	±1,500 V			
		Electrostatic discharge	4kV (Contact discharge)			
		Radiated electromagnetic field noise	80 ~ 1,000 MHz, 10V/m			
		Fast transient/burst noise	Segment	Power supply module	Digital/analog input/output communication interface	
			Voltage	2kV	1kV	
8	Environment	Free from corrosive gasses and excessive dust				
9	Altitude	Up to 2,000 ms				
10	Pollution degree	2 or less				
11	Cooling	Air-cooling				

[Table 2-1] General specification

#### Note

1) IEC (International Electrotechnical Commission):

An international nongovernmental organization which promotes internationally cooperated standardization in electric/electronic field, publishes international standards and manages applicable estimation system related with.

2) Pollution degree:

An index indicating pollution degree of the operating environment which decides insulation performance of the devices. For instance, Pollution degree 2 indicates the state generally that only non-conductive pollution occurs. However, this state contains temporary conduction due to dew produced.

## 2.2 Transmission Specifications

[Table 2-2] shows transmission specifications of XGB Fast Enet I/F module media.

Item	Specifications	Remark
Transmission specifications	Transmission speed	Auto/10M/100Mbps
	Transmission type	Base band
	Flow control	HALF/FULL
	Modulation type	NRZI
	Transformer CT	1:1
	Max. distance between nodes	100m
	Max. segment length	-
	Max. number of nodes	Hub connection
	Node interval	-
	Max. protocol size	Data 512byte
	Communication zone access method	CSMA/CD
	Check method for frame error	CRC32

[Table 2-2] Transmission specifications

## 2.3 Cable Specifications

### 2.3.1 Cable classification

XGB Fast Enet I/F module uses UTP cable above Category 5. [Table 2-3] shows cable specifications.

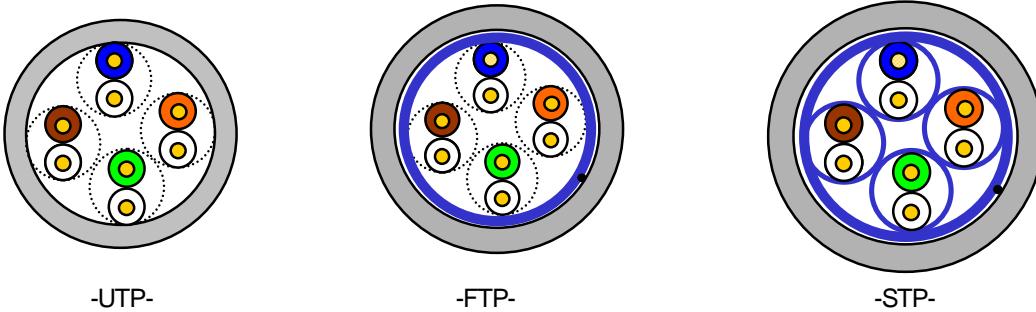

Classification	Details	Purpose
UTP(or U.UTP)	So called unshielded cable used for HS signal	<ul style="list-style-type: none"> <li>Max. 200MHz</li> <li>Phonetic + Data + low grade of video signal</li> </ul>
FTP(or S.UTP)	Cable with cable core only shielded solely	<ul style="list-style-type: none"> <li>Max.100MHz</li> <li>Electromagnetic Interference (EMI) and electric stability considered</li> <li>Phonetic + Data + low grade of video signal</li> </ul>
STP(or S.STP)	Double-shielded structure, pair shielded and core shielded cable	<ul style="list-style-type: none"> <li>Max. 500MHz</li> <li>Phonetic + Data + Video signal</li> <li>Substitute for 75Ω coaxial cable</li> </ul>

[Table 2-3] Cable class

#### Remark

- 1) XGB Fast Enet I/F module does not support AUI (10BASE-5).
- 2) Twisted paired cable unit (above category 5) takes 100Mbps class hub and if network speed is 10 Mbps, it can be used with 10Mbps class hub (below category 3). Be cautions prior to the installations.

## Chapter 2 Specifications

### Remark

- 1) UTP : Unshielded Twisted Pair Copper Cable  
FTP : (Overall) Foiled Twisted Pair Copper Cable  
STP : (Overall) Shielded (and Shielded Individually Pair) Twisted Pair Copper Cable
- 2) Patch Cable (or Patch Cord)  
Stranded conductor composed of stranded cable instead of solid conductor may be used to increase the flexibility of UTP 4-paired cable. Representative specification and material are un-coated AWG 24 (7/0203A).  
In other words, the diameter of a single cable is 0.203mm, and this cable is of 1+6 structure as standardized with annealed copper cable.

### 2.3.2 Frequency classification

Classification	Frequency (MHz)	Transmission speed (Mbps)	Purpose
Category 1	Phonetic frequency	1	<ul style="list-style-type: none"> <li>Phone network (2-Pair)</li> </ul>
Category 2	4	4	<ul style="list-style-type: none"> <li>Multi-Pair communication cable</li> </ul>
Category 3	16	16	<ul style="list-style-type: none"> <li>Phone network + computer network</li> </ul>
Category 4	20	20	<ul style="list-style-type: none"> <li>Computer network transmission speed up</li> <li>Low-loss communication cable</li> </ul>
Category 5 & Enhanced Category5	100	100	<ul style="list-style-type: none"> <li>Digital phone network + computer network</li> <li>Low-loss, broadband cable</li> </ul>

[Table 2-4] Frequency classification

### Remark

- 1) Presently Category 3, 5, En-Cat.5, and Cat.6 are commonly used and classified under domestic/international makers, where Category 4 has been replaced by Category 5 and Category 7 is being developed all over the world as STP structure.

### 2.3.3 Category 5 twisted pair cable (UTP) examples (CTP-LAN5)

Item	Unit	Value	
Conductor resistance (Max.)	Ω/km	93.5	
Insulation resistance (Min.)	MΩ·km	2,500	
Withstand voltage	V/min	AC 500	
Characteristic impedance	Ω(1~100MHz)	100 ± 15	
Decrement	Below dB/100m	10MHz	6.5
		16MHz	8.2
		20MHz	9.3
Near-end crosstalk decrement	Below dB/100m	10MHz	47
		16MHz	44
		20MHz	42

[Table 2-5] UTP cable specification

## Chapter 2 Specifications

### 2.4 Performance Specifications

#### 2.4.1 General performance specifications

[Table 2-6] shows general performance specifications of XGB Fast Enet I/F module.

Item		Specifications	Remark
Max. modules can be installed		2	<ul style="list-style-type: none"><li>▪ Per 1 CPU unit</li></ul>
Max. numbers of connection channels		6 channels	<ul style="list-style-type: none"><li>▪ TCP/IP : 4 channels</li><li>▪ Remote 1: 1 channel</li><li>▪ Remote 2: 1 channel</li></ul>
Consumption	DC 5V	300mA	-
Weight		71g	-

[Table 2-6] General performance specifications

#### 2.4.2 Performance specifications by communication Service

[Table 2-7] shows performance specifications by communication service of XGB Fast Enet I/F module.

Item		Specifications			
		Driver	Communication method	Port Number	Remark
Function classification	Dedicated	XGT server	TCP/IP	2004	<ul style="list-style-type: none"><li>▪ Max. 4 channels</li><li>▪ Max. 512 bytes</li></ul>
			UDP/IP	2005	
		Modbus TCP server	TCP/IP	502	
	HS link	-	UDP/IP	2006	<ul style="list-style-type: none"><li>▪ Max. 64 blocks</li><li>▪ 200 words per block</li></ul>
	P2P	XGT client	TCP/IP	2006	<ul style="list-style-type: none"><li>▪ Max. 3 channels</li><li>▪ Max. 32 blocks</li><li>▪ Max. 512 bytes</li></ul>
			UDP/IP	2005	
		Modbus TCP client	TCP/IP	502	
	User define frame		TCP/IP	User's assignment	
			UDP/IP	User's assignment	

[Table 2-7] Performance specifications by communication service

### 2.4.3 Diagnosis function specifications

[Table 2-8] shows diagnosis function specifications of XGB Fast Enet I/F module.

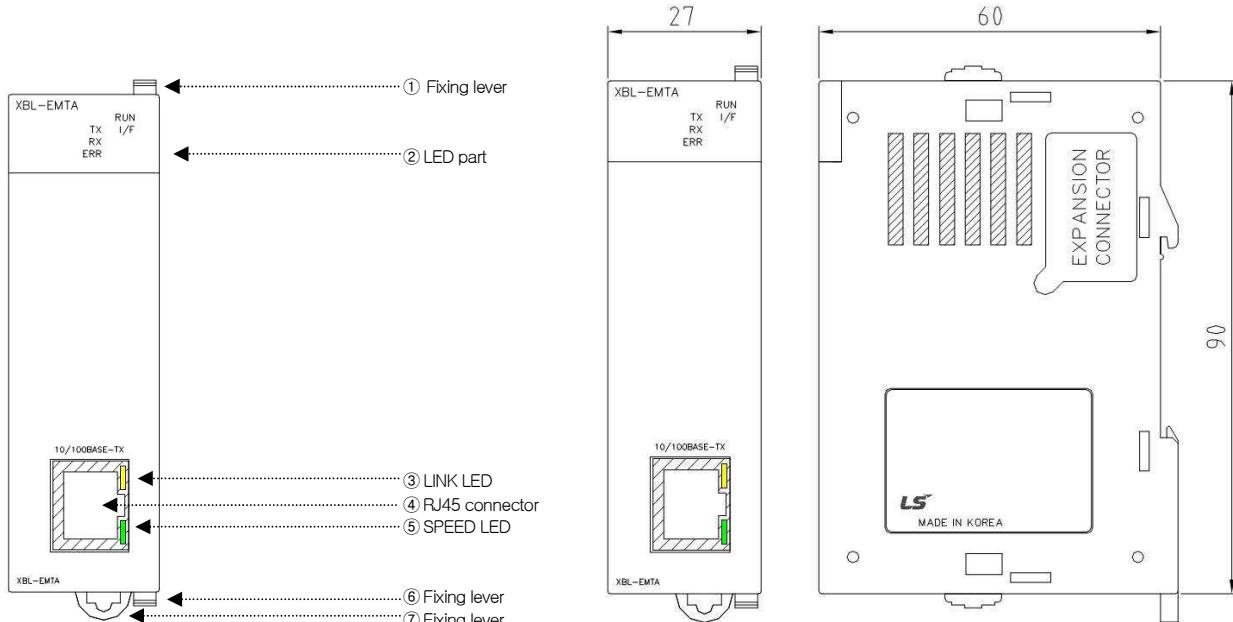

Item		Specifications
Diagnosis Function	Communication module information	<ul style="list-style-type: none"> <li>▪ HS link station no.</li> <li>▪ IP/Subnet mask IP/Gateway IP/DNS Server IP</li> <li>▪ Main service/HS link/P2P enable</li> <li>▪ Setting media</li> <li>▪ Hardware/ software version</li> </ul>
	Service condition	<ul style="list-style-type: none"> <li>▪ Send packet number / Receive packet number / Error packet number / State</li> <li>▪ Setting drive</li> </ul>
		<ul style="list-style-type: none"> <li>▪ Send/ Receive packet number</li> <li>▪ HS link flag(Run, Link, Mode, State, TRX, Error)</li> </ul>
		<ul style="list-style-type: none"> <li>▪ Connection state / Service state</li> <li>▪ Service count / Error count</li> </ul>
	Media Information	<ul style="list-style-type: none"> <li>▪ Total Send/Receive packet number</li> <li>▪ Broad, Multi, Uni, UDP, ARP, EARP, Throw-out</li> </ul>
		<ul style="list-style-type: none"> <li>▪ Packet Rate per sec.</li> </ul>
	Ping test	<ul style="list-style-type: none"> <li>▪ IP Address / Setting times / Time out</li> </ul>
Auto scan		Non-service

[Table 2-8] Diagnosis function specification

## Chapter 2 Specifications

### 2.5 Dimensions and Names of Parts

#### 2.5.1 Dimensions and names of parts

[Fig. 2-1] Dimensions and names of parts

#### 2.5.2 Designation of parts

Item		Description	
□	Fixing lever	Extension module fixing part (the upper)	
□	LED	RUN	On Normal operating Off Stop operating
		I/F	flicker Interface with CPU Off Stop interface with CPU
		TX	flicker Data transmission time Off Stop data transmitting
		RX	flicker Data receiving time Off No data reception
		ERR	On HW error flicker S/W error
		LINK LED (Yellow)	flicker Packet reception time Off No packet reception
□	RJ45 connector	RJ45 connector part	
□	SPEED LED (Green)	On	100Mbps operating time
□	Fixing lever	Expansion module fixing part (the lower)	
□	Fixing lever	DIN rail fixing part	

[Table 2-9] Designation of Parts

## Chapter 3 Installation

### 3.1 Cautions for Installation

This device is highly reliable regardless of its installation environment. However the followings should be noted for securing reliability and stability.

#### 3.1.1 Environmental conditions

- (1) Install on a water-proof and dust control panel
- (2) Place free of continuous impact or vibration
- (3) Place out of direct sunrays
- (4) Place without dewing by sudden temperature change
- (5) Place where ambient temperature stays between 0-55°C.

#### 3.1.2 Installation cautions

- (1) If producing screw holes or wiring, it should be noted that any impurities from wiring work are not to be inserted into PLC.
- (2) Install on an accessible place.
- (3) Do not install on same panel with high voltage device.
- (4) Maintain at least more than 50mm from duct or surrounding modules.
- (5) Ground on a place where little noise is detected

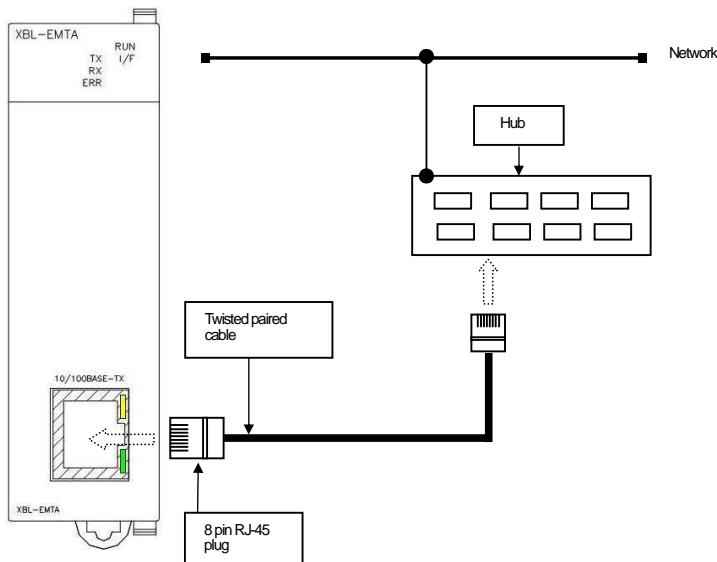

#### 3.1.3 Handling cautions

- (1) Do not drop or do not apply any excessive impact on it.
- (2) Do not separate PCB from case (shield), which may cause breakage.
- (3) Make sure that while wiring, any impurities should not be inserted into the upper part of this module.
- (4) Do not attach or detach the module once power is on.
- (5) Cable should be selected considering the approved specification, install this device within the permitted max. distance.
- (6) Communication cable shall be arranged so that it won't be influenced by any surge or induced noise generated from AC.
- (7) If wiring is too close to any hot devices or materials or contacts with oils for a long time, it may cause short circuit, malfunction or breakdown.
- (8) If wire by using pipes, it needs grounding pipes.

## Chapter 3 Installation

### 3.2 Installation and Wiring

#### 3.2.1 Network connection

[Fig. 3-1] Network connection

#### 3.2.2 UTP cable wiring

Max. distance between nodes of 10/100BASE-TX is 100m (The distance from the module to hub).

In general, the hub uses straight cable with TD and RD stranded inside. If only 2 of these communication modules are connected 1 to 1, cross-cable form should be used.

Pin no.	Signal	Straight cable (Module-Hub)	1 to 1 Cross-cable
1	TD+	1—1	1—3
2	TD-	2—2	2—6
3	RD+	3—3	3—1
6	RD-	6—6	6—2
4, 5, 7, 8	N/A		

[Table 3-1] Cable wiring

#### Remark

- 1) Hub power should be separated from PLC power.
- 2) Contact professional manufacturers for cable terminal.

## (1) Cautions for UTP installation

- (a) UTP cable should be satisfied the characteristics of category 5.
- (b) Do not access Max. tension strength of the cable during a period of wiring processing.
- (c) Do remove only the length of wiring, do not damage the insulator for removing covering (Sheath).
- (d) Keep suitable distance between EMI source and UTP cable during the period of installing UTP cable.

Condition	Min. separation distance		
	2.0KVA or less	2.5 KVA	5.0KVA or more
Power line unshielded, or electric facility open or near to nonmetallic pipe	127mm	305mm	610mm
Power line unshielded, or electric facility near to metallic pipe buried	64mm	152mm	305mm
Power line inside metallic pipe buried (or equivalently shielded) near to metallic pipe buried	-	76mm	152mm
Transformer / Electric motor light	1,016mm /305mm		

[Table 3-2] Cautions for UTP installation

**3.2.3 Cautions for system and network connection**

- (1) IP address should be different including this module. If not, normal communication is not available.
- (2) Set each exchange number differently for using HS link service.
- (3) Use specified communication cable. Other cables may occur communication trouble.
- (4) Check disconnection or short circuit of communication cable before installation.
- (5) Do tighten communication cable connector.
- (6) If cable connection is not stable, it may occur some severe trouble of communication.
- (7) Wire communication cable separately from power supply line or inductive noise.

## Chapter 3 Installation

### 3.2.4 Check points before start-up

The following describes check points before start-up communication module.

#### (1) Communication module

Check points
Installation and operation of XG5000, Performance and operation of XG-PD
Connection condition of communication cable (only the condition of connecting cable)
Module installation condition

[Table 3-3] Check points before start-up

#### (2) Start-up processing

It shows start -up from finishing installation of module on PLC.

Start
Power- ON :
1) Check power source
2) Check the connection of communication cable
3) Power- ON.
4) Check LED 'ON' of power supply
5) Check LED status on CPU module -> If abnormal, refer to the troubleshooting contents of each PLC manual.
6) Check LED status (normal/abnormal) of communication module -> If abnormal, refer to chapter 10. Troubleshooting of this manual.
7) Download after setting system parameter correctly

Programming : Program at XG5000, Write on CPU module
▼

Sequence check :
Check module operation by program

Program correction :
Do correct if sequence program has problem

Saving program:
1) Save program in floppy disc or hard disc.
2) Print out circuit diagram and list by printer.

End

## Chapter 4 System Configuration

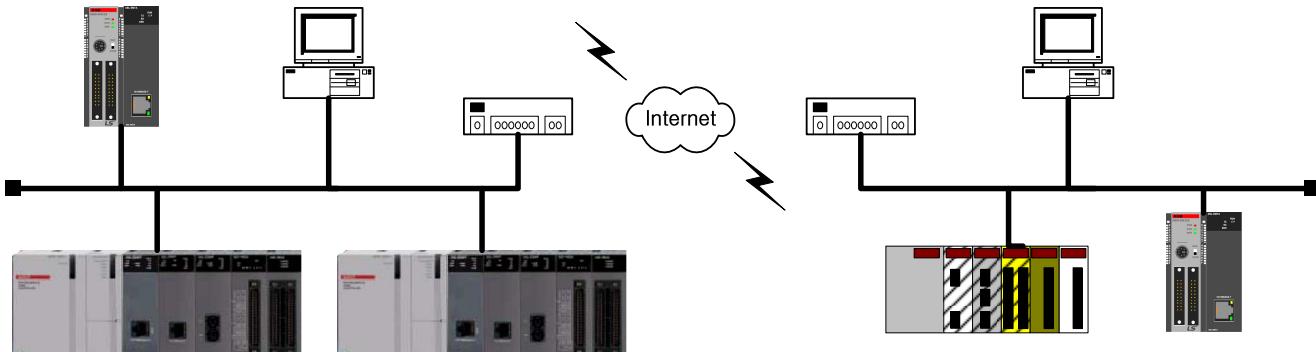

### 4.1 General

#### 4.1.1 General

XGB Fast Enet I/F module supports open Enet. It provides network configuration that is to connect XGB and other company PLCs, PC on network.

### 4.2 Examples of System Configuration

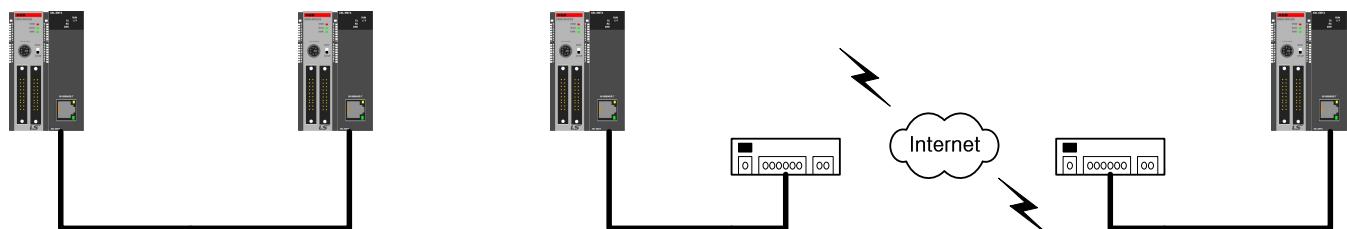

#### 4.2.1 Combination network configuration

[Figure 4-1] Combination network configuration

XGB Fast Enet I/F module provides system configuration by using main communication, Modbus TCP/IP, user define frame, HS link communication connecting IMO PLC with other IMO PLC, PC on network.

#### 4.2.2 Network configuration using XGB

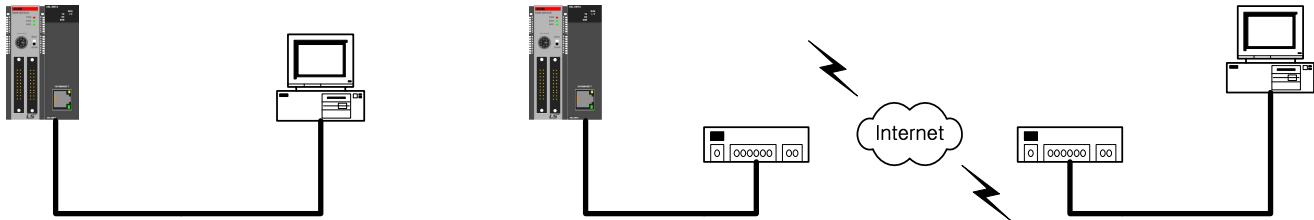

[Figure 4-2] Network configuration using XGB

Communication between XGB Fast Enet I/F modules is available to perform 1:1 communication by using cross cable or 1:N communication by connecting network. It provides data sending/receiving by using the dedicated service, Modbus TCP/IP, user define frame and HS link communication.

## Chapter 4 System Configuration

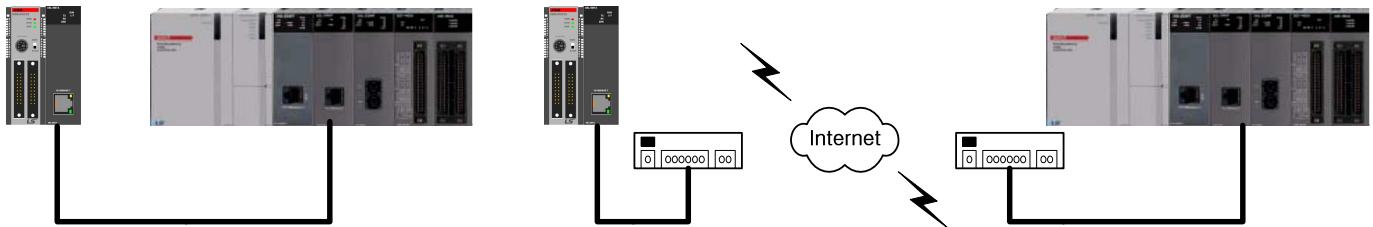

### 4.2.3 Network configuration using XGB and MMI

[Figure 4-3] Network configuration using XGB and MMI

Communication between XGB Fast Enet I/F module and PC is available to perform 1:1 communication by using cross cable or 1:N communication by connecting network. It provides connecting and data sending/receiving by using XG5000, XG-PD or MMI on PC. XG5000, XG-PD do download/upload parameter and program and furthermore these provide data sending/receiving by using the dedicated service, Modbus TCP/IP, user define frame.

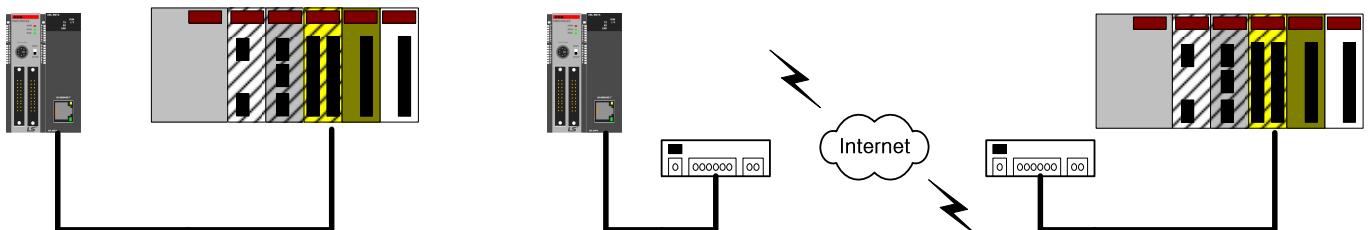

### 4.2.4 Network configuration between IMO modules

[Figure 4-4] Network configuration between XGB modules

XGB Fast Enet I/F module and Enet I/F of XGT series provide system configuration. 1:1 communication is available using cross cable or 1:N communication is available by connecting network. It provides data sending/receiving by using main service, Modbus TCP/IP, user define frame.

### 4.2.5 Network configuration using XGB and other PLCs

[Figure 4-5] Network configuration using XGB and other IMO PLCs

XGB Fast Enet I/F module provides communication with other IMO PLC, HMI, MMI. . 1:1 communication is available using cross cable or 1:N communication is available by connecting network. To communicate, protocols between PLCs should be same.

## Chapter 5 Protocols of Various Services

### 5.1 General

#### 5.1.1 XGB Fast Enet I/F module protocol introduction

XGB Fast Enet I/F module supports open Ethernet. It provides network configuration that is to connect XGB and other company PLCs, PC on network.

IP, each PLC parameters, and protocol need to be set in order to communicate after finishing network configuration. Supported protocols by XGB Fast Enet I/F module are XGT dedicated, Modbus TCP/IP, user define frame.

Each protocol supports server/client operation. Dedicated server and P2P function communicate according to the designated protocols.

#### 5.1.2 Protocol by service

Each protocol's classified as server/client by its function. [Table 5-1] shows protocol by service.

Item		Specification			
		Driver	Communication method	Port No.	Remark
Communication function	Dedicated	XGT server	TCP/IP	2004	<ul style="list-style-type: none"> <li>▪ Max. 4 channels</li> <li>▪ Max. 512 bytes</li> </ul>
			UDP/IP	2005	
	P2P	Modbus TCP server	TCP/IP	502	<ul style="list-style-type: none"> <li>▪ Max. 3 channels</li> <li>▪ Max. 32 blocks</li> </ul>
		XGT client	TCP/IP	2004	
			UDP/IP	2005	
		Modbus TCP client	TCP/IP	502	
		User define frame	TCP/IP	User's assignment	
			UDP/IP	User's assignment	

[Table 5-1] Protocols of various services

## Chapter 5 Protocols of Various Services

### 5.2 XGT Dedicated Protocol

#### 5.2.1 General

XGT main protocol does communicate between XGB Enet I/F modules. Read/write is available by instructions and communication is available on PC, HMI by using XGT dedicated protocol.

XGT dedicated communication is available in 2-ways communication method of TCP and UDP.

Protocol	Communication method	Port no.
XGT dedicated	TCP/IP	2004
	UDP/IP	2005

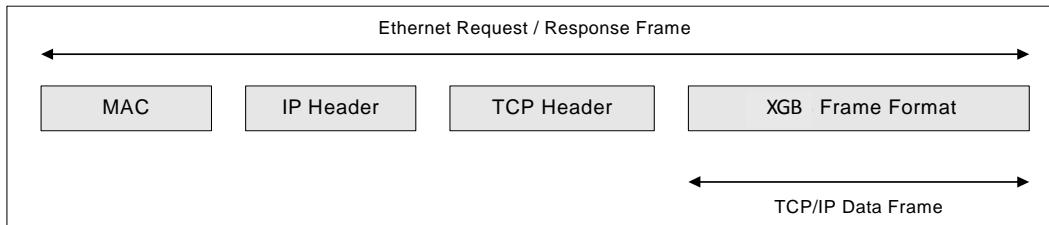

[Table 5-2] XGT main protocol

#### 5.2.2 Frame structure

##### (1) XGT dedicated packet structure through Ethernet

During the period of communicating by using XGT dedicated protocol, it includes XGB frame which includes MAC, IP header, TCP header and data for Ethernet communication.

[Fig. 5-1] shows XGT dedicated packet structure through Enet.

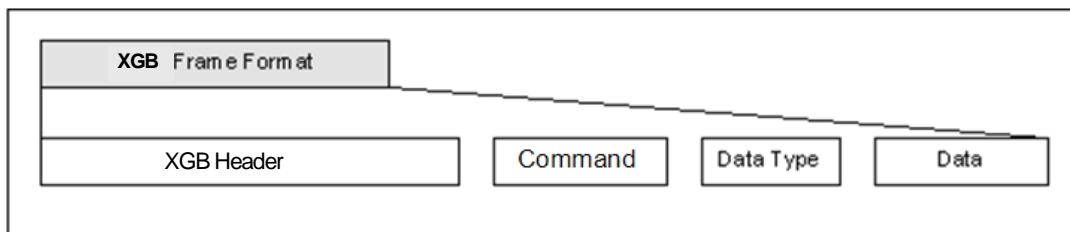

[Figure 5-1] XGT dedicated packet structure through Ethernet

##### (2) XGT dedicated frame structure

XGB own frame for data communication includes XGB ID, instruction, data type, data.

[Fig.5-2] shows XGT dedicated frame structure.

[Figure 5-2] XGT dedicated frame structure

### 5.2.3 XGT dedicated protocol data type

XGT dedicated protocol is available to take [Table. 5-3] data type.

Data type	Data code	Example
Bit	0x0000	%PX0,%LX0,%FX0
Byte	0x0100	%MB0, %PB0, %DB0
Word	0x0200	%PW0,%LW0,%FW0,%DW0
DWord	0x0300	%PD0,%LD0,%FD0,%DD0
LWord	0x0400	%PL0,%LL0,%FL0,%DL0
Continuous(Byte)	0x1400	-

[Table 5-3] XGT dedicated protocol data type

### 5.2.4 Instruction of XGT dedicated protocol

Using instructions of XGT dedicated protocol are 4, each instruction does Read/Write, Request/Response.

In case of 'Individual', usable data types of each instruction are Bit, Byte, Word, DWord, LWord.

But for the 'Continuous', only Byte is usable.

Instruction	Instruction code	Data type		Treatment
Read	Request : 0x5400	Individual	0x0000	Reads data by each data type
			0x0100	
			0x0200	
			0x0300	
			0x0400	
		Continuous	0x1400	Reads byte type variables in block unit
	Response : 0x5500	Individual	0x0000	Responses to the request of Read data
			0x0100	
			0x0200	
			0x0300	
			0x0400	
Write	Request : 0x5800	Individual	0x0000	Writes by each data type
			0x0100	
			0x0200	
			0x0300	
			0x0400	
		Continuous	0x1400	Read byte type variables in block unit
	Response: 0x5900	Individual	0x0000	Responses to the request of Write data
			0x0100	
			0x0200	
			0x0300	
			0x0400	
		Continuous	0x1400	Responses to the request of Write in block unit

[Table 5-4] Instruction of XGT dedicated protocol

## Chapter 5 Protocols of Various Services

### 5.2.5 Header and data structure of XGT dedicated protocol

#### (1) Header and data structure

[Table 5-5] shows Company Header, Command, Data Type, Data, which included in XGB frame of XGT dedicated protocol.

Item	Client(Request frame)			Server(Response frame)				
	Classification	Content	Size	Classification	Content	Size		
Company Header	XGBID	XGB ID 1	10	XGB ID	XGB ID 1 XGB ID 2	10		
	PLC information	h00~ h FF	2	PLC information	h 00~ h FF	2		
	CPU information	h A0	1	CPU information	h A0	1		
	Frame direction	h 33	1	Frame direction	h 11	1		
	Frame order no.	h 0000~ h FFFF	2	Frame order no.	h 0000~ h FFFF	2		
	Length	h 0000~ h 0100	2	Length	h 0000~ h 0100	2		
	Position information	h 00~ h FF	1	Position information	h 00~ h FF	1		
	Check sum	h 00~ h FF	1	Check sum	h 00~ h FF	1		
Command	Instruction	h 5400	Read	2	Instruction	h 5500	Read	2
		h 5800	Write			h 5900	Write	
Data Type	Data type	h 0000	Bit	2	Data type	h 0000	Bit	2
		h 0100	Byte			h 0100	Byte	
		h 0200	Word			h 0200	Word	
		h 0300	DWord			h 0300	DWord	
		h 0400	LWord			h 0400	LWord	
		h 1400	Continuous			h 1400	Continuous	
Data	Reserved area	-	2	Reserved area		-	2	
	Number of blocks	h 0100~ h 1000	2	Error status		h 0000~ h FFFF	2	
	Length of variables(N)	h 0400~ h 1000	2	Data			2	
	Data address	-	N					
	Number of data	h 0(M)00	M					

[Table 5-5] Header and data structure of XGT dedicated protocol

#### (2) XGB ID

XGB network uses 2 XGB IDs. XGB ID 1 is for operation of XGT, XGB series as a client.

In case of operating as a server, XGB ID requested by a client, the client should use XGB ID 1 or XGB ID 2.

Classification	Format	Frame										Remark
XGB ID 1	HEX	h 4C	h 53	h 49	h 53	h 2D	h 58	h 47	h 54	h 00	h 00	XGT,XGB
XGB ID 2	HEX	h 4C	h 47	h 49	h 53	h 2D	h 47	h 4C	h 4F	h 46	h 41	GM,MK

[Table 5-6] XGB ID

### 5.2.6 Frame examples

(1) Request frame for individual reading of variables

Classification	Type	Frame										Size
XGB Header	HEX	0x 4C	0x 53	0x 49	0x 53	0x 2D	0x 58	0x 47	0x 54	0x 00	0x 00	10

[Table 5-10] Response frame for continuous reading of variables

### 5.3 Modbus TCP/IP Protocol

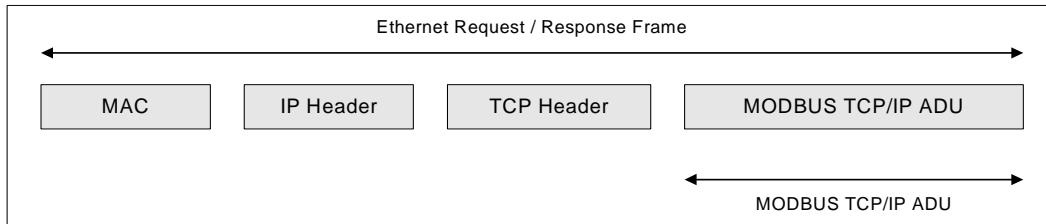

#### 5.3.1 General

Modbus TCP/IP protocol function is to data Read/Write by using function codes. Modbus TCP/IP frame is composed of MAC, IP Header, TCP Header, Modbus ADU for Ethernet communication.

- (1) ADU : Application Data Unit
- (2) MBAP : MODBUS Application Protocol
- (3) PDU : Protocol Data Unit

#### 5.3.2 Structure of Modbus TCP/IP frame

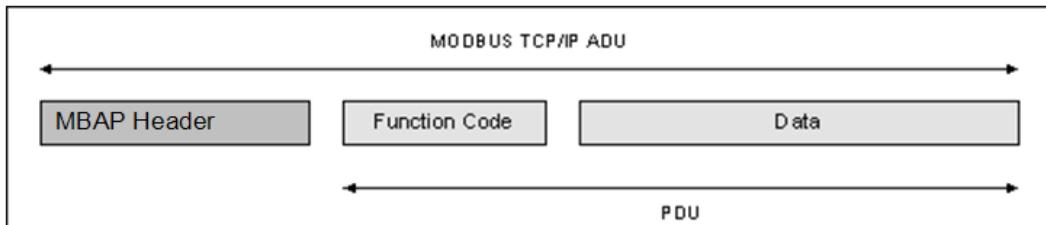

- (1) Structure of Modbus TCP/IP frame through Enet

[Figure 5-3] Structure of Modbus TCP/IP frame through Enet

[Figure 5-4] Structure of Modbus TCP/IP ADU

[Figure 5-5] Structure of Modbus ADU

## Chapter 5 Protocols of Various Services

### 5.3.3 MBAP Header structure

Classification	Size	Description	Client	Server
Transaction Identifier	2 bytes	MODBUS Request/Response treatment	Initializing	Response repeatedly if server responses
Protocol Identifier	2 bytes	0 = MODBUS protocol	Initializing	Reproducing it from request frame if server responses
	2 bytes	Frame size except MBAP	Making (If requested)	Server makes it (If it responses)
Unit Identifier	1byte	Classification of unit which connected to serial line	Initializing	Reproducing it from request frame if server responses

[Table 5-11] MBAP Header structure

### 5.3.4 Available function code

Classification	Function	Modbus mark
Function Code 01 (0x01)	Read output bit	Read Coils
Function Code 02 (0x02)	Read input bit	Read Discrete Inputs
Function Code 03 (0x03)	Read output word	Read Holding Registers
Function Code 04 (0x04)	Read input word	Write Input Register
Function Code 05 (0x05)	Write output bit	Write single Coil
Function Code 15 (0x0F)	Continuously write output bit	Write Multiple Coils
Function Code 16 (0x10)	Continuously write output word	Write Multiple Registers

[Table 5-12] Available function code

### 5.3.5 Frame structure by function code

(1) Function code 0x01: Read Coils

(a) Request

Classification	Size	Range
Function code	1 byte	0x01
Start address	2 bytes	0x0000 ~ 0xFFFF
Number of coils	2 bytes	0x0001 ~ 0x07D0 (2000 bits)

[Table 5-13] Function code 0x01 request frame

(b) Response

Classification	Size	Range
Function code	1 byte	0x01
Number of bytes	2 bytes	N
Coil status	n byte	n = N or N + 1

[Table 5-14] Function code 0x01 response frame

(c) Error

Classification	Size	Range
Function code	1 byte	0x81 (Function code + 0x80)
Exception code	1 byte	0x01,0x02,0x03,0x04

[Table 5-15] Function code 0x01 error frame

(d) Examples

Request frame		Response frame	
Classification	HEX	Classification	HEX
Function code	0x01	Function code	0x01
Start address (Upper byte)	0x00	Number of bytes	0x03
Start address (Lower byte)	0x13	Coil status (27-20)	0xCD
Number of coils (Upper byte)	0x00	Coil status (36-28)	0x6B
Number of coils (Lower byte)	0x13	Coil status (38-36)	0x05

[Table 5-16] Function code 0x01 frame examples

(2) Function code 0x02: Read input bit (Read Discrete Inputs)

(a) Request

Classification	Size	Range
Function code	1 byte	0x02
Start address	2 bytes	0x0000 ~ 0xFFFF
Number of input	2 bytes	0x0001 ~ 0x07D0 (2000 bits)

[Table 5-17] Function code 0x02 request frame

(b) Response

Classification	Size	Range
Function code	1 byte	0x01
Number of bytes	2 bytes	N
Input status	N x 1 bytes	-

[Table 5-18] Function code 0x02 response frame

(c) Error

Classification	Size	Range
Function code	1 byte	0x82 (Function code + 0x80)
Exception code	1 bytes	0x01,0x02,0x03,0x04

[Table 5-19] Function code 0x02 response frame

(d) Examples

Request frame		Response frame	
Classification	HEX	Classification	HEX
Function code	0x02	Function code	0x01
Start address (Upper byte)	0x00	Number of bytes	0x03
Start address (Lower byte)	0xC4	Coil status (27-20)	0xCD
Input status (Upper byte)	0x00	Coil status (36-28)	0x6B
Number of coils (Lower byte)	0x16	Coil status (38-36)	0x05

[Table 5-20] Function code 0x02 request frame examples

## Chapter 5 Protocols of Various Services

(3) Function code 0x03: Read Holding Registers

(a) Request

Classification	Size	Range
Function code	1 byte	0x03
Start address	2 bytes	0x0000 ~ 0xFFFF
Number of input	2 bytes	0x0001 ~ 0x007D (125 words)

[Table 5-21] Function code 0x03 request frame

(b) Response

Classification	Size	Range
Function code	1 byte	0x01
Number of bytes	2 bytes	2 x N
Input status	N x 2 bytes	-

[Table 5-22] Function code 0x03 response frame

(c) Error

Classification	Size	Range
Function code	1 byte	0x83 (Function code + 0x80)
Exception code	1 byte	0x01,0x02,0x03,0x04

[Table 5-23] Function code 0x03 error frame

(d) Examples

Request frame		Response frame	
Classification	HEX	Classification	HEX
Function code	0x03	Function code	0x03
Start address (Upper byte)	0x00	Number of bytes	0x06
Start address (Lower byte)	0x6B	Word status (108)	0x02
Number of words (Upper byte)	0x00	Word status (108)	0x2B
Number of words (Lower byte)	0x03	Word status (109)	0x00
		Word status (109)	0x00
		Word status (110)	0x00
		Word status (110)	0x64

[Table 5-24] Function code 0x03 frame examples

(4) Function code 0x04: Read Input Registers

(a) Request

Classification	Size	Range
Function code	1 byte	0x04
Start address	2 bytes	0x0000 ~ 0xFFFF
Number of input	2 bytes	0x0001 ~ 0x007D (125 words)

[Table 5-25] Function code 0x04 request frame

(b) Response

Classification	Size	Range
Function code	1 byte	0x04
Number of byte	2 bytes	2 x N
Input status	N x 2 bytes	-

[Table 5-26] Function code 0x04 response frame

(c) Error

Classification	Size	Range
Function code	1 byte	0x84 (Function code + 0x80)
Exception code	1 byte	0x01,0x02,0x03,0x04

[Table 5-27] Function code 0x04 error frame

(d) Examples

Request frame		Response frame	
Classification	HEX	Classification	HEX
Function code	0x04	Function code	0x04
Start address (Upper byte)	0x00	Number of bytes	0x02
Start address (Lower byte)	0x08	Word status (108)	0x00
Number of words (Upper byte)	0x00	Word status (108)	0x0A
Number of words (Lower byte)	0x01		

[Table 5-28] Function code 0x04 frame examples

(5) Function code 0x05: Write Single Coil

(a) Request

Classification	Size	Range
Function code	1 byte	0x05
Start address	2 bytes	0x0000 ~ 0xFFFF
Input value	2 bytes	0x0000 or 0xFF0D

[Table 5-29] Function code 0x05 request frame

(b) Response

Classification	Size	Range
Function code	1 byte	0x05
Number of bytes	2 bytes	0x0000 ~ 0xFFFF
Input status	2 bytes	0x0000 or 0xFF00

[Table 5-30] Function code 0x05 response frame

(c) Error

Classification	Size	Range
Function code	1 byte	0x85 (Function code + 0x80)
Exception code	1 byte	0x01,0x02,0x03,0x04

[Table 5-31] Function code 0x05 error frame

(d) Examples

Request frame		Response frame	
Classification	HEX	Classification	HEX
Function code	0x02	Function code	0x01
Start address (Upper byte)	0x00	Number of bytes	0x03
Start address (Lower byte)	0xC4	Coil status (27-20)	0xCD
Input status (Upper byte)	0x00	Coil status (36-28)	0x6B
Number of coils (Lower byte)	0x16	Coil status (38-36)	0x05

[Table 5-32] Function code 0x05 frame examples

## Chapter 5 Protocols of Various Services

(6) Function code 0x0F: Write Multiple Registers

(a) Request

Classification	Size	Range
Function code	1 byte	0x0F
Start address	2 bytes	0x0000 ~ 0xFFFF
Number of output	2 bytes	0x0001 ~ 0x07BD
Number of bytes	1 byte	N
Output value	N x 1 byte	

[Table 5-33] Function code 0x0F request frame

(b) Response

Classification	Size	Range
Function code	1 byte	0x0F
Number of bytes	2 bytes	0x0000 ~ 0xFFFF
Input status	2 bytes	0x0001 ~ 0x07B0

[Table 5-34] Function code 0x0F response frame

(c) Error

Classification	Size	Range
Function code	1 byte	0x8F (Function code + 0x80)
Exception code	1 byte	0x01,0x02,0x03,0x04

[Table 5-35] Function code 0x0F request frame

(d) Examples

Request frame		Response frame	
Classification	HEX	Classification	HEX
Function code	0x0F	Function code	0x0F
Start address (Upper byte)	0x00	Start address (Upper byte)	0x00
Start address (Lower byte)	0x13	Start address (Lower byte)	0x13
Number of output (Upper byte)	0x00	Number of output(Upper byte)	0x00
Number of output (Lower byte)	0x0A	Number of output(Lower byte)	0x0A
Number of bytes	0x02		
Output value (Upper byte)	0xCD		
Output value (Lower byte)	0x01		

[Table 5-36] Function code 0x01 request frame examples

(7) Function code 0x06: Write Single Register

(a) Request

Classification	Size	Range
Function code	1 byte	0x06
Start address	2 bytes	0x0000 ~ 0xFFFF
Output value	2 bytes	0x0000 or 0xFFFF

[Table 5-37] Function code 0x06 request frame

(b) Response

Classification	Size	Range
Function code	1 byte	0x06
Start address	2 bytes	0x0000 ~ 0xFFFF
Output value	2 bytes	0x0000 or 0xFFFF

[Table 5-38] Function code 0x06 response frame

(c) Error

Classification	Size	Range
Function code	1 byte	0x86 (Function code + 0x80)
Exception code	1 byte	0x01,0x02,0x03,0x04

[Table 5-39] Function code 0x06 error frame

(d) Examples

Request frame		Response frame	
Classification	HEX	Classification	HEX
Function code	0x06	Function code	0x06
Start address (Upper byte)	0x00	Number of bytes	0x00
Start address (Lower byte)	0x01	Coil status (27-20)	0x01
Input status (Upper byte)	0x00	Coil status (36-28)	0x00
Number of coils(Lower byte)	0x03	Coil status (38-36)	0x03

[Table 5-40] Function code 0x06 frame examples

(8) Function code 0x10: Write Multiple Registers

(a) Request

Classification	Size	Range
Function code	1 byte	0x10
Start address	2 bytes	0x0000 ~ 0xFFFF
Number of output	2 bytes	0x0001 or 0x07D8
Number of bytes	1 byte	2 x N
Output value	N x 2 bytes	value

[Table 5-41] Function code 0x10 request frame

(b) Response

Classification	Size	Range
Function code	1 byte	0x10
Number of bytes	2 bytes	0x0000 ~ 0xFFFF
Number of output	2 bytes	0x0001 ~ 0x007B

[Table 5-42] Function code 0x01 response frame

(c) Error

Classification	Size	Range
Function code	1 byte	0x90 (Function code + 0x80)
Exception code	1 byte	0x01,0x02,0x03,0x04

[Table 5-43] Function code 0x10 error frame

## Chapter 5 Protocols of Various Services

### (d) Examples

Request frame		Response frame	
Classification	HEX	Classification	HEX
Function code	0x10	Function code	0x01
Start address (Upper byte)	0x00	Start address (Upper byte)	0x00
Start address (Lower byte)	0x01	Start address (Lower byte)	0x01
Number of output (Upper byte)	0x00	Number of output (Upper byte)	0x00
Number of output (Lower byte)	0x02	Number of output (Lower byte)	0x02
Number of bytes	0x04		
Output value (Upper byte)	0x00		
Output value (Lower byte)	0x0A		
Output value (Upper byte)	0x01		
Output value (Lower byte)	0x02		

[Table 5-44] Function code 0x10 frame examples

# Chapter 6 Dedicated Service

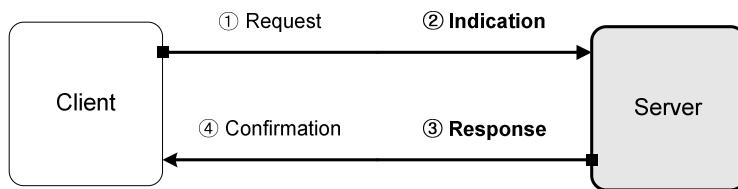

## 6.1 Dedicated Service Function Introduction

### 6.1.1 Server model

Dedicated service provides a server function as [Fig.6-1] Client/Server model  
It operates data Read/Write by the protocol that the client connects and sets.

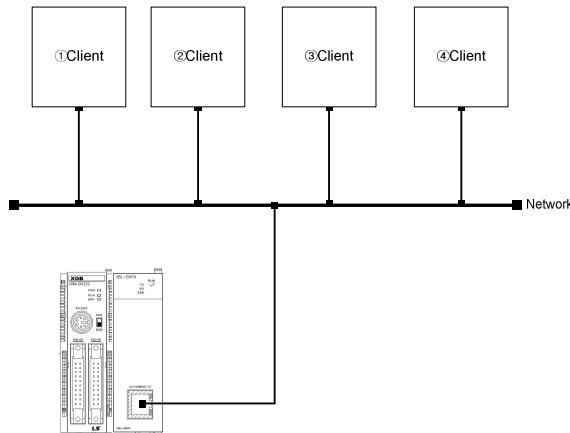

(1) Client/ Server model

Server does perform the function of  Indication and  Response.

[Figure 6-1] Client/ Server model

### 6.1.2 System configuration

[Figure 6-2] Client/ Server system configuration

### 6.1.3 Dedicated service classification

Classification		Port no.	Protocol classification	Min./Max. connection numbers
XGT server	TCP XGT server	2004	TCP	1/4
	UDP XGT server	2005	UDP	1/4
Modbus TCP/IP server		502	TCP	1/4

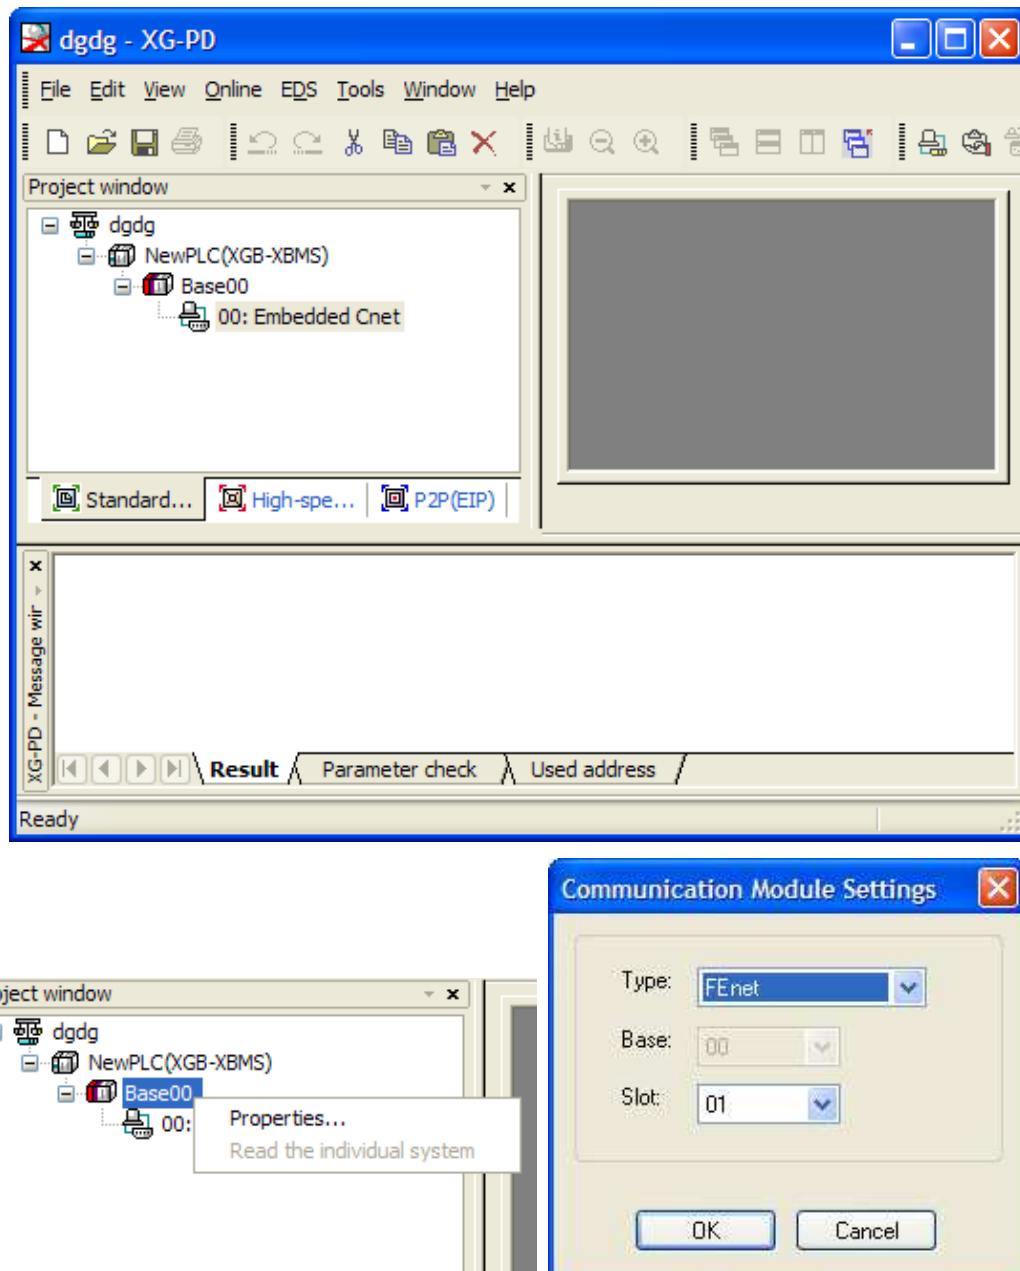

[Table 6-1] Dedicated service classification

### 6.2 Setting Dedicated Service

#### 6.2.1 Basic parameter

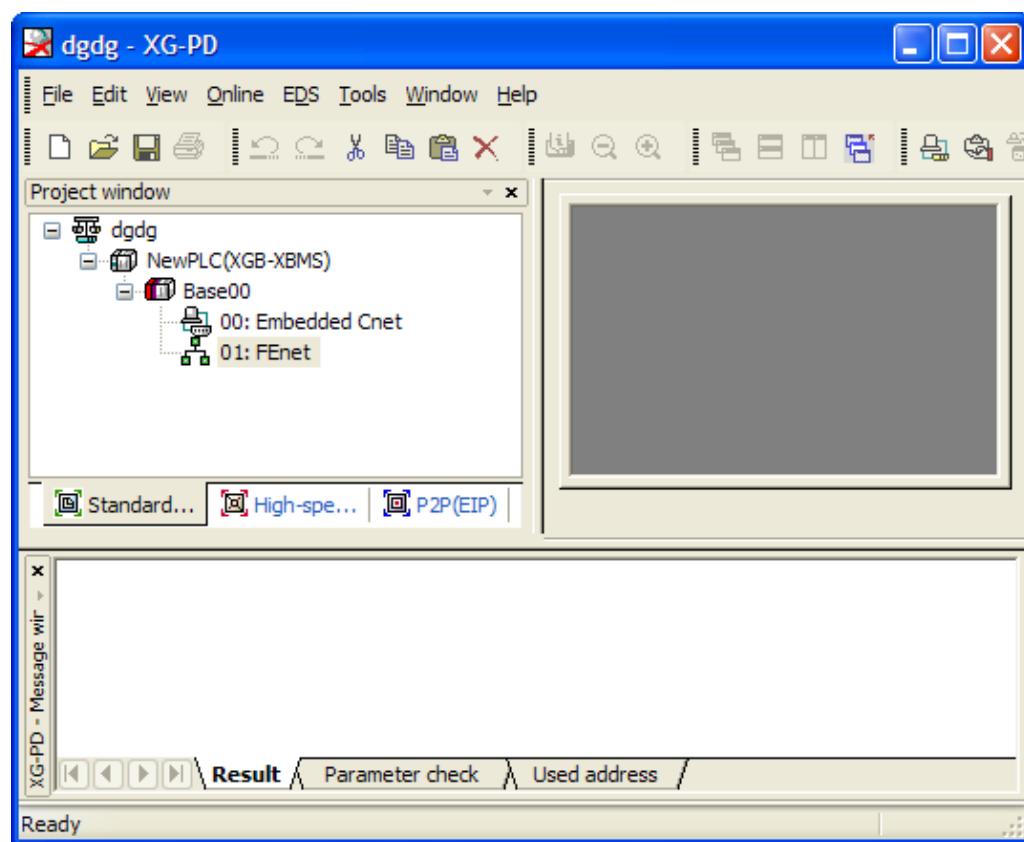

##### (1) Setting basic parameter in XG-PD

Open XG-PD. Then click right button of mouse while cursor is on the Base in the Project window. After selecting Properties, set type as FEnet and set slot where FEnet module is installed.

[Figure 6-3] Selecting basic parameter and setting communication module

Click OK key. Then no.1 slot is changed into FEnet as figure below.

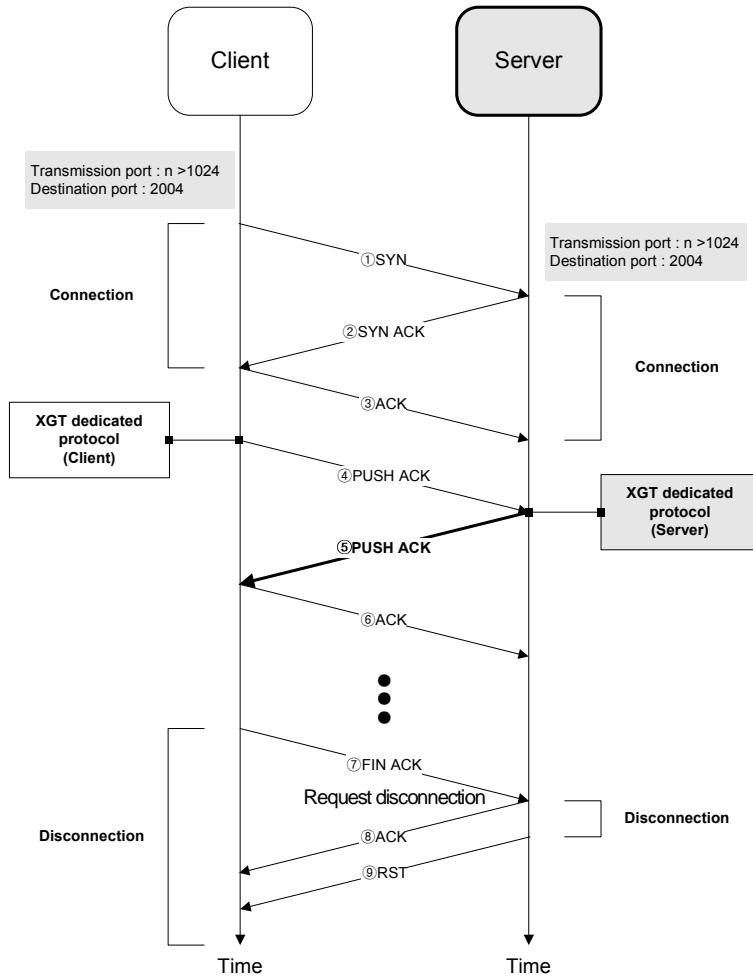

[Figure 6-4] Standard parameter setting

### 6.3 XGT Server

#### 6.3.1 TCP XGT server

TCP XGT server operates as below [Fig.6-5] TCP XGT server operation flow.

[Figure 6-4] TCP XGT server operation flow

##### (1) Connection

- Client does transmit □ SYN to serve. Server does □ SYN ACK.
- Connection port no. is XGT dedicated protocol port no. 2004.
- Client does connection check response □ ACK.
- Finishing □~□ makes client/server connection.

##### (2) TCP XGT server

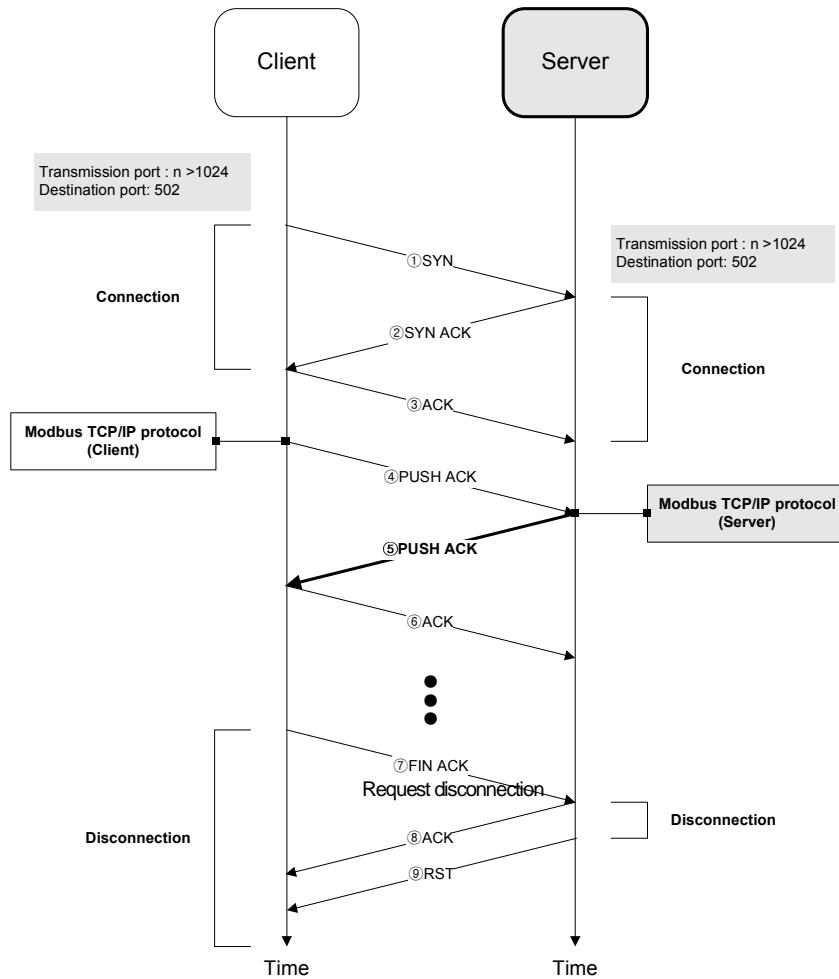

- After connection, client does transmit □ PUSH ACK according to XGT dedicated protocol.
- Server does transmit □ PUSH ACK for PUSH ACK Frame.
- Client does transmit □ ACK.

##### (3) Disconnection

- Client does transmit □ FIN ACK (Request disconnection)
- Server does transmit □ RST and disconnect.

## 6.4 Modbus TCP/IP Server

Modbus TCP/IP server operates as below [Fig.6-6] Modbus TCP/IP Server operation flow.

[Figure 6-5] Modbus TCP/IP Server operation flow

(4) Connection

- Client does transmit □ SYN to serve. Server does □ SYN ACK.
- Connection port no. is XGT dedicated protocol port no. 502.
- Client does connection check response □ ACK.
- Finishing □~□ makes client/server connection.

(5) TCP XGT client

- After connection, client does transmit □ PUSH ACK according to XGT dedicated protocol.
- Server does transmit □ PUSH ACK for PUSH ACK Frame.
- Client does transmit □ACK.

(6) Disconnection

- Client does transmit □ FIN ACK (Request disconnection)
- Server does transmit □ RST and disconnect.

# Chapter 7 P2P Service

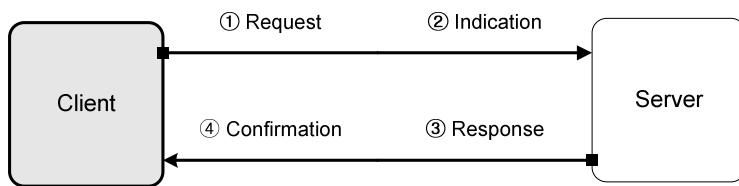

## 7.1 P2P Service Function

### 7.1.1 Client model

P2P service provides a client function as below [Fig.7-1] Client/Server model.

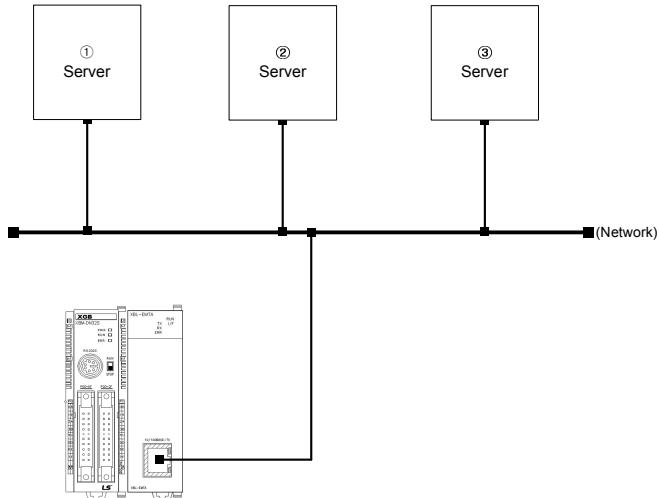

It requests data Read/Write to server. When each block operation status is ON, it provides the function of connecting request frame to the right channel and receiving response.

XGB Fast Enet I/F module communicates through Max.3 channels, each channel communicates by using different protocols.

[Fig. 7-1] Client/Server model

Server executes ① Request and ④ Confirmation.

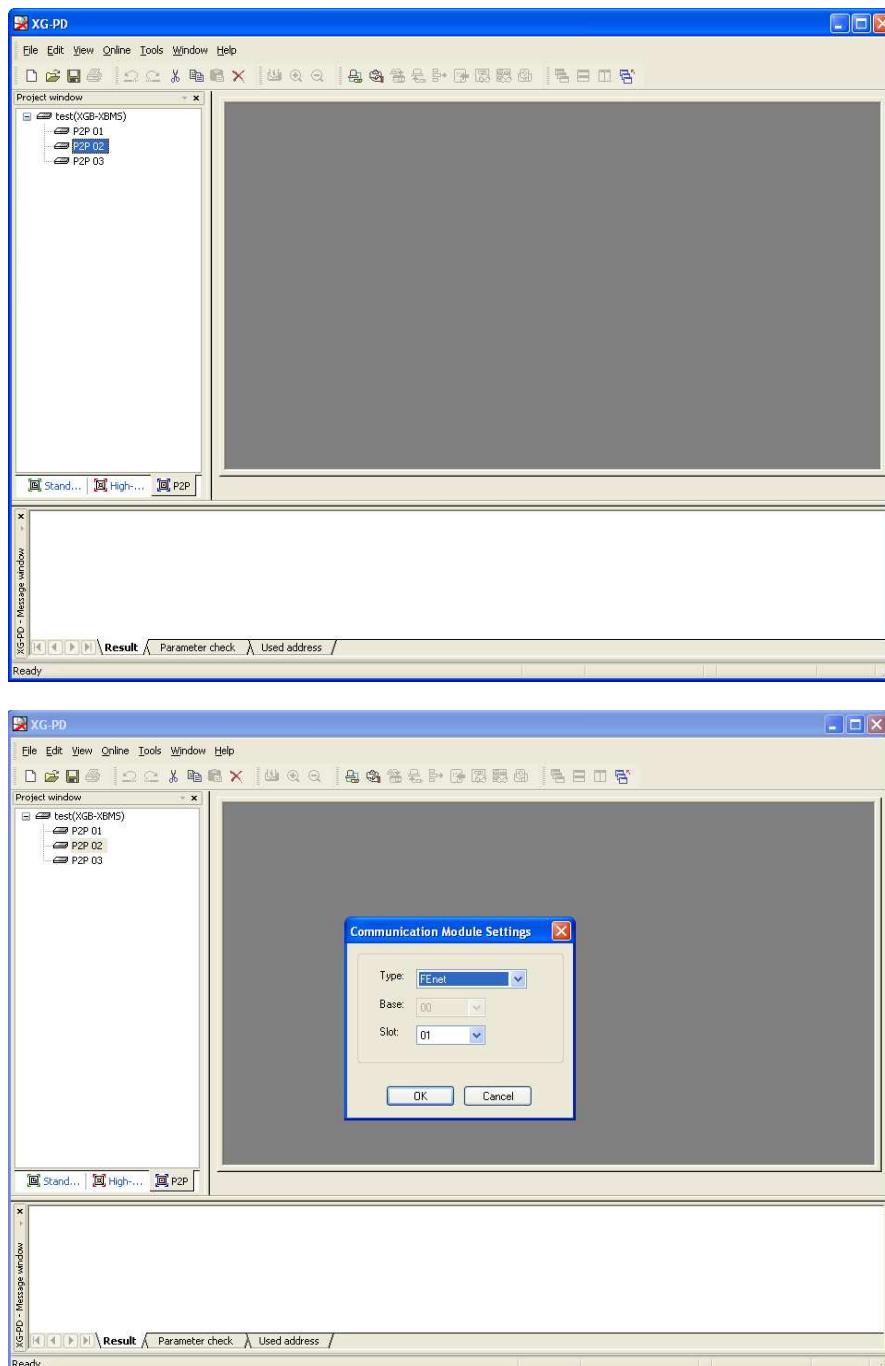

[Fig. 7-2] Client/Server system configuration

XBL-EMTA is available to connect Max. 3 servers as [Fig 7-2].

## 7.2 Setting P2P Service

### 7.2.1 Setting P2P parameter

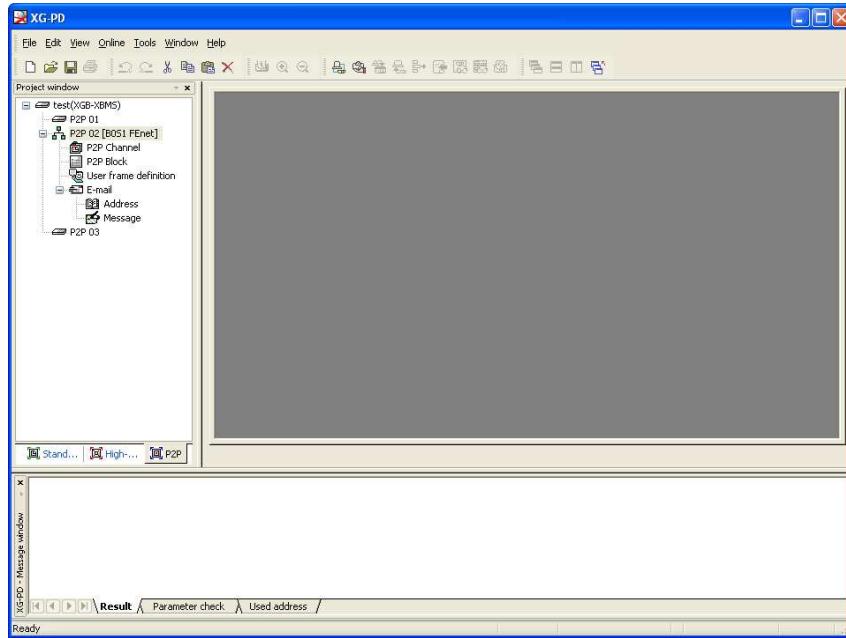

#### (1) Setting communication module

[Fig. 7-3] Communication module setting screen in P2Pparameter

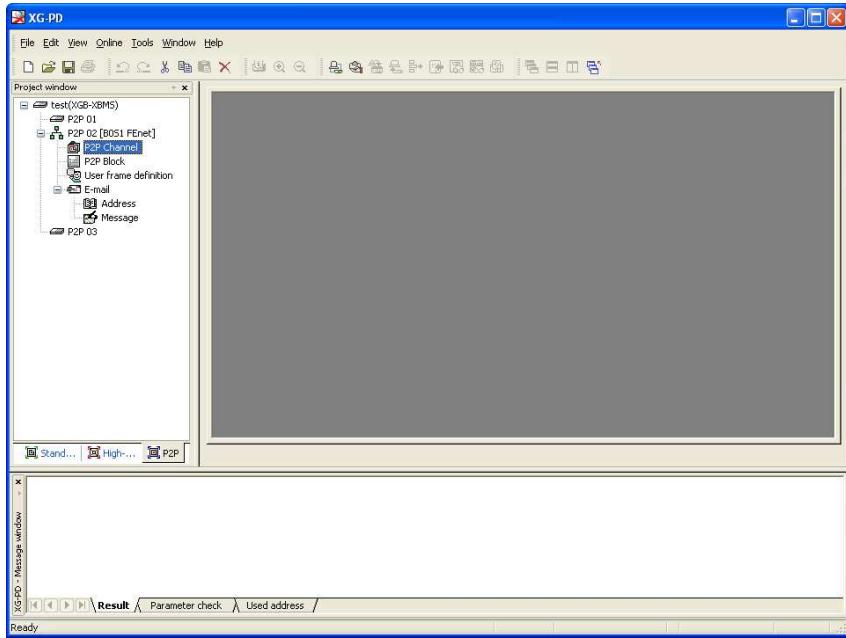

## Chapter 7 P2P Service

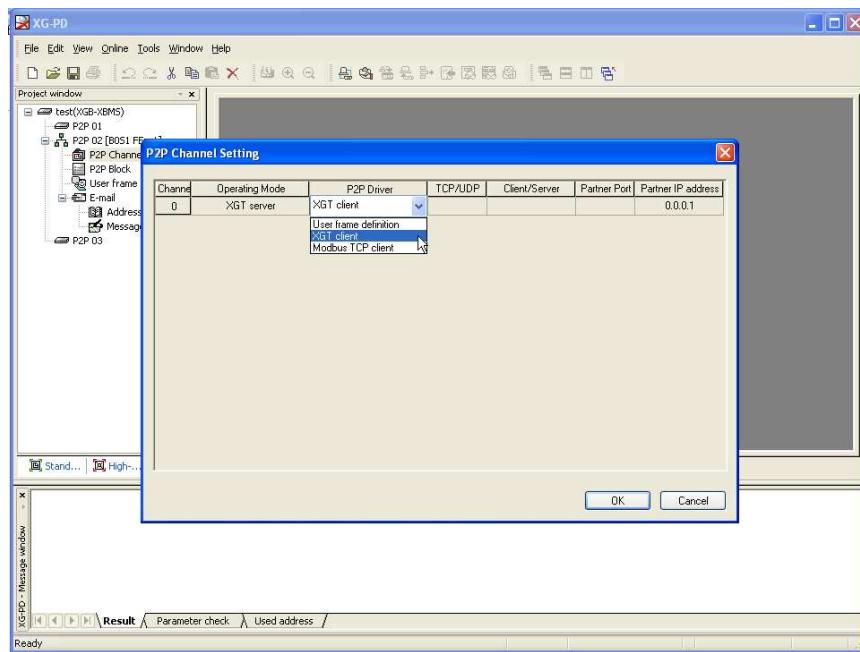

- (a) As the left part of [Fig.7-3] project screen, select P2P 02 or P2P 03, double-click it.
- (b) P2P 01 is a setting value of XGB CPU built-in communication. It's fixed as Cnet.
- (c) Double-clicking shows communication setting screen as the right part of [Fig.7-3].
- (d) Set FEnet in types.
- (e) Base is fixed as 00.
- (f) Slot is 01~07. Set it by the installation sequence of XBL-EMTA.
- (g) After finishing setting communication module, click enter key.
- (h) Clicking enter key shows detailed item of P2P as [Fig.7-4].

[Fig. 7-4] Finishing setting communication module in P2P parameter

### (2) Setting channel

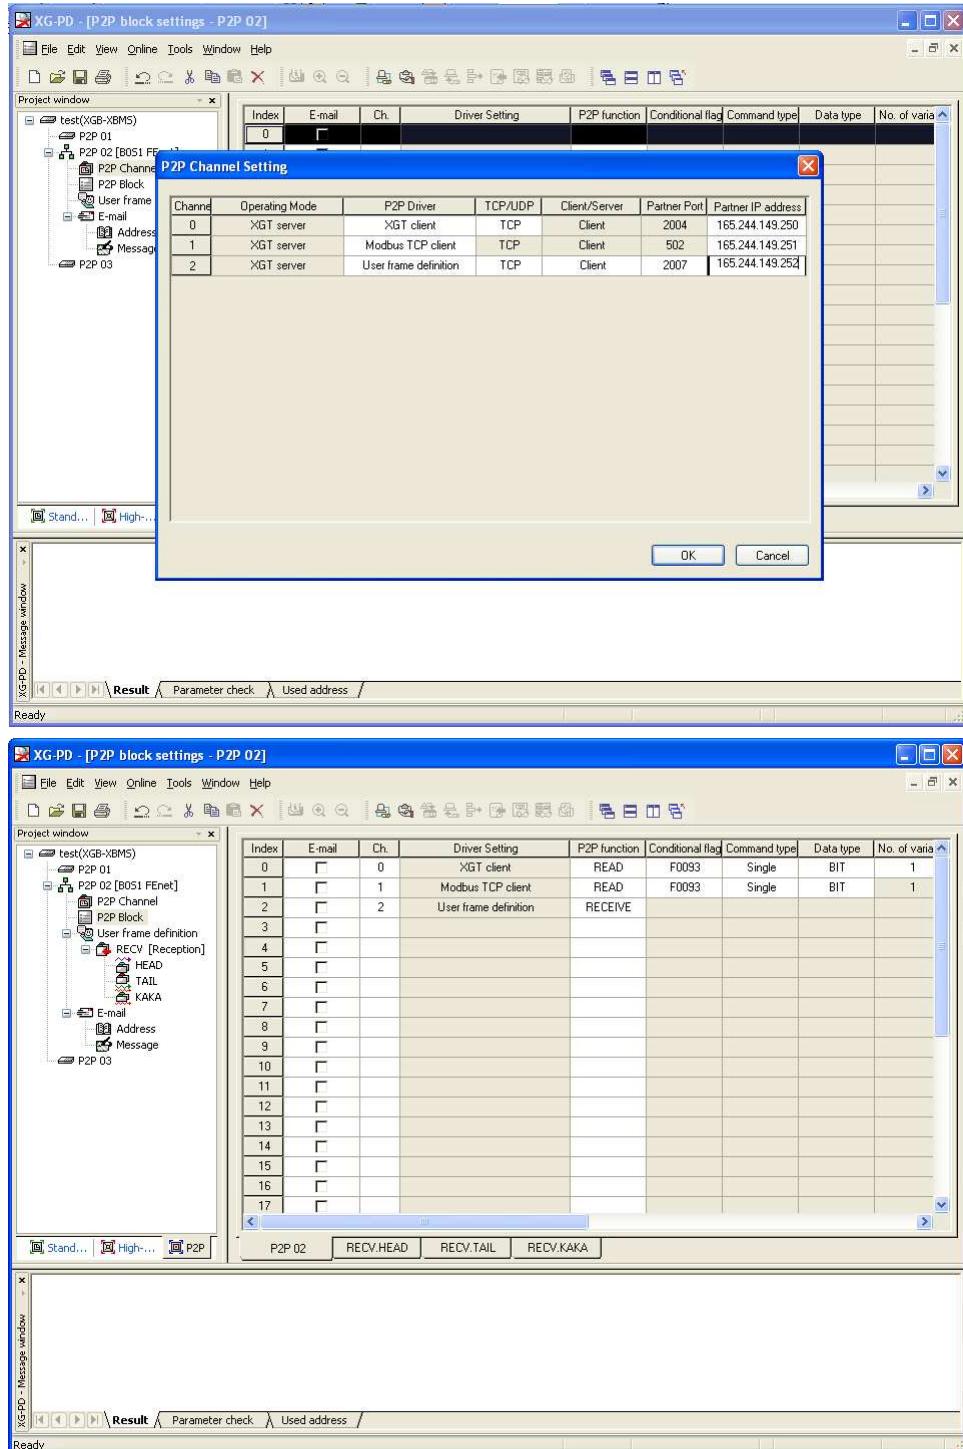

[Fig. 7-5] P2P channel setting screen

- (a) As the left screen of [Fig.7-5] project screen, select P2P channel, double-click it.
  - (b) Double-clicking shows P2P channel setting screen as the right part of [Fig. 7-5].
  - (c) Select the desired driver by clicking the arrow icon of P2P driver on P2P channel setting screen.
  - (d) Select driver
- (3) XGT client
- (a) In case of assigning XGT client, TCP/UDP should be selected.
  - (b) Selecting TCP assigns port no. 2004. Selecting UDP assigns port no.2005.
  - (c) Write the destination IP address.
- (4) Modbus TCP client
- (a) Selecting Modbus client fixes port no.502.
  - (b) Write the destination IP address.
- (5) User frame definition
- (a) In case of assigning user define frame, communication type should be selected as TCP/UDP.
  - (b) Select Client/Server in operation mode.
  - (c) Write the desired port no.
  - (d) Write the destination IP address.

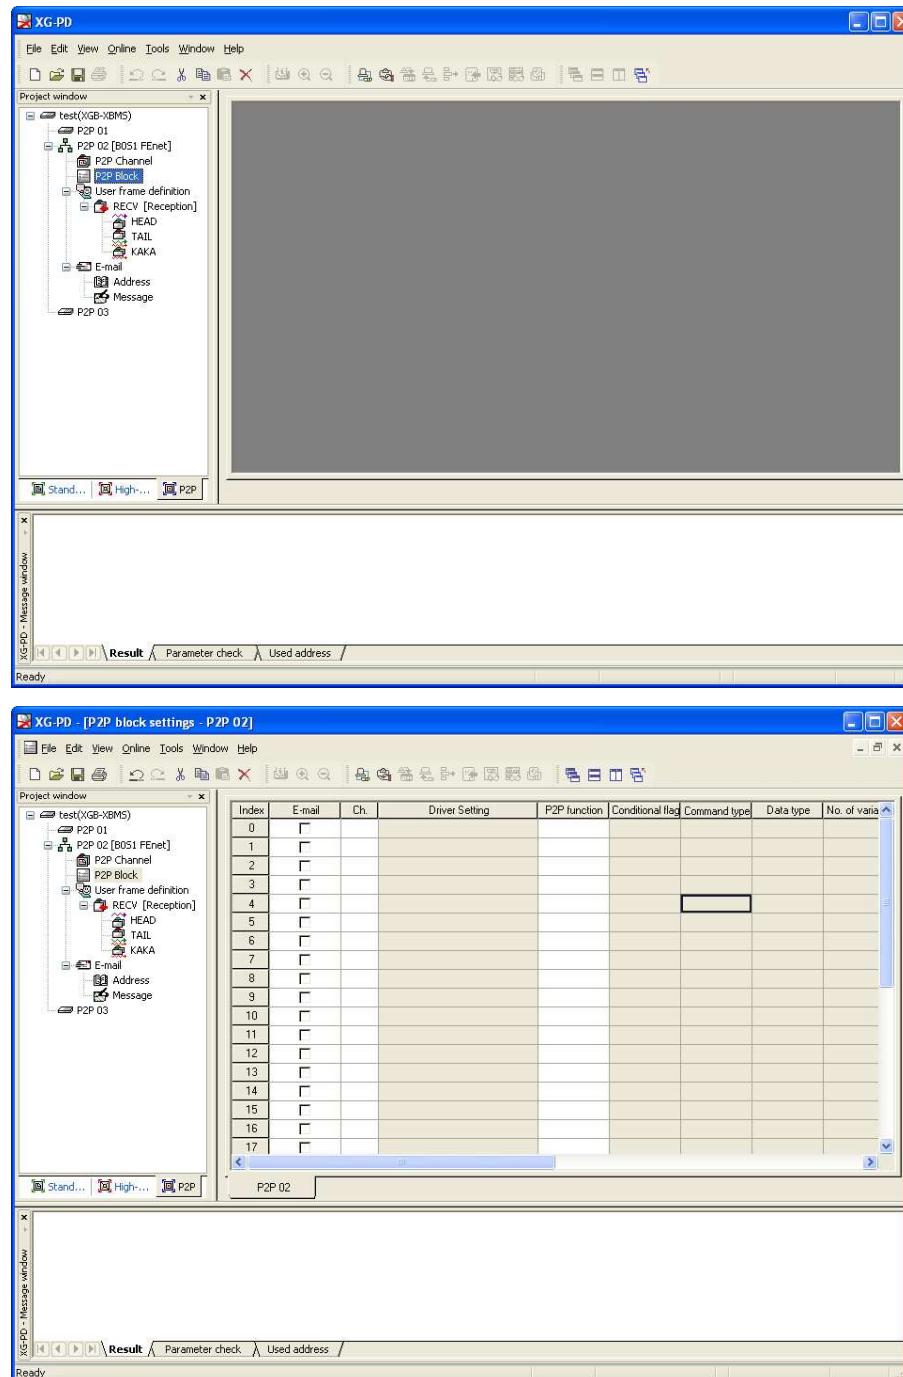

## Chapter 7 P2P Service

[Fig.7-6] is an example that setting P2P on 3 channels.

[Fig. 7-6] Example of setting P2P

## (6) Setting P2P block

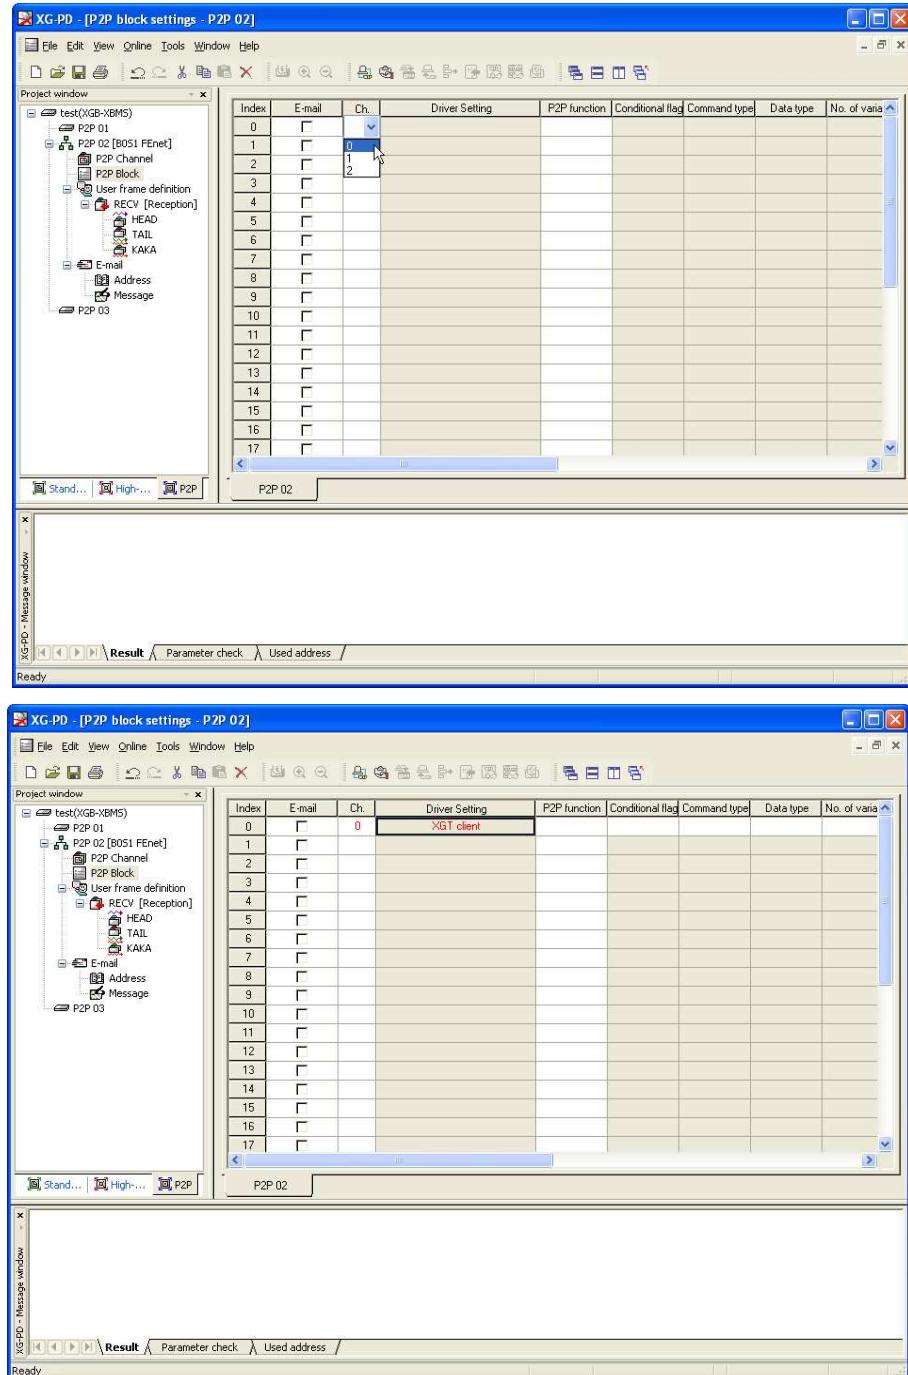

[Fig. 7-7] P2P block setting screen

- (a) After finishing setting channels, select P2P block on the project screen of [Fig.7-7], double-click it.
- (b) Double-clicking shows block setting screen as the right screen of [Fig.7-7].

## Chapter 7 P2P Service

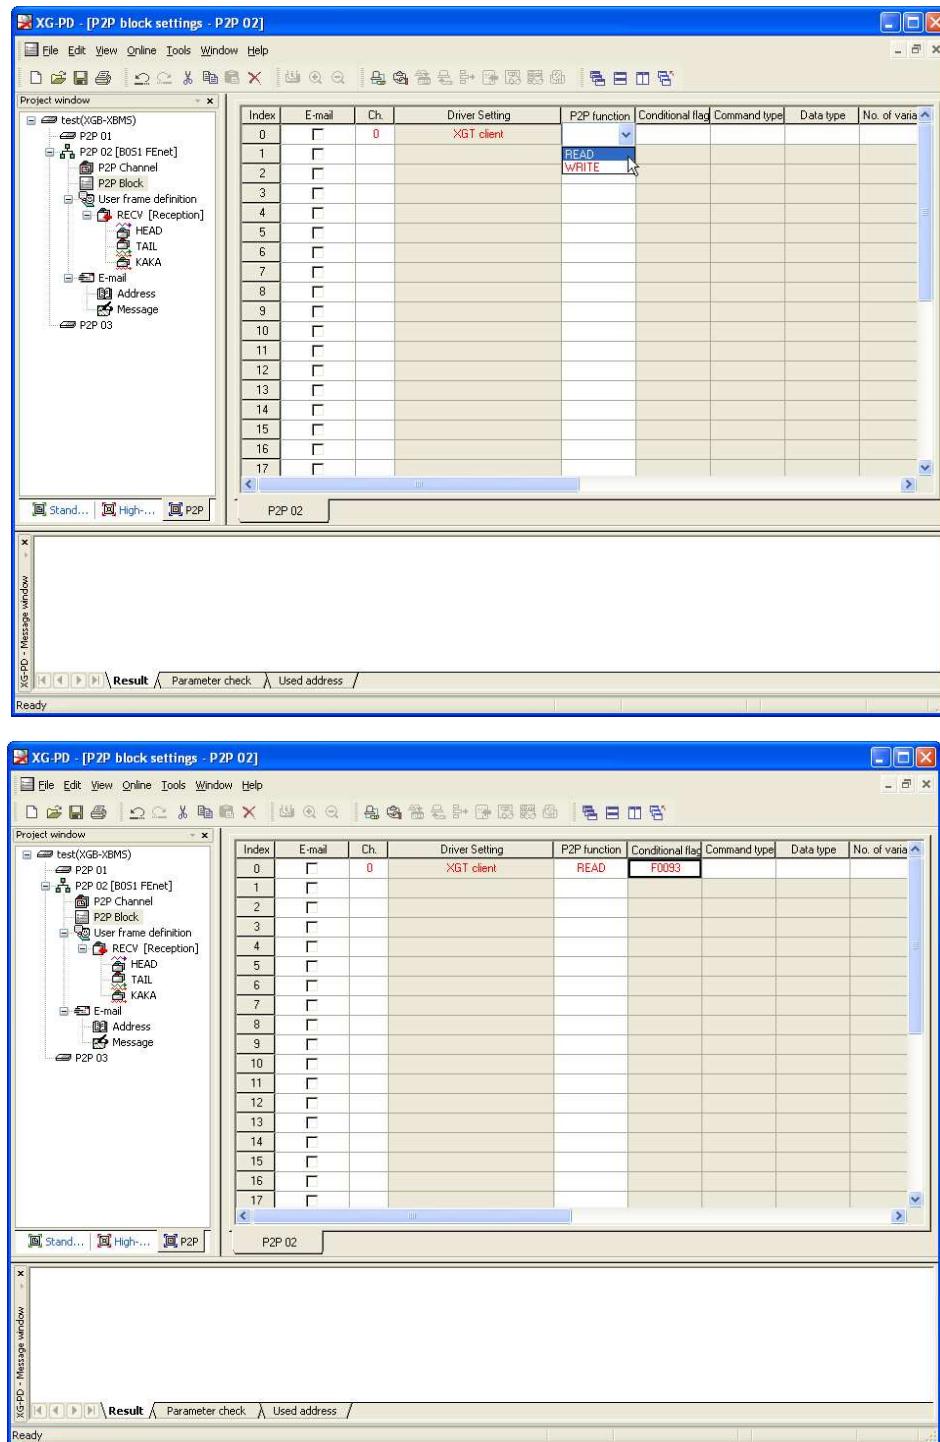

### (7) Setting P2P block channel

[Fig. 7-8] Setting P2P block channel

- (a) Assign each block channel as the left screen of [Fig. 7-8]. Select one from registered channels (0~3).
- (b) Assigning the desired channel as the right screen of [Fig. 7-8] saves assigned driver on setting channel.

(8) Setting P2P block driver

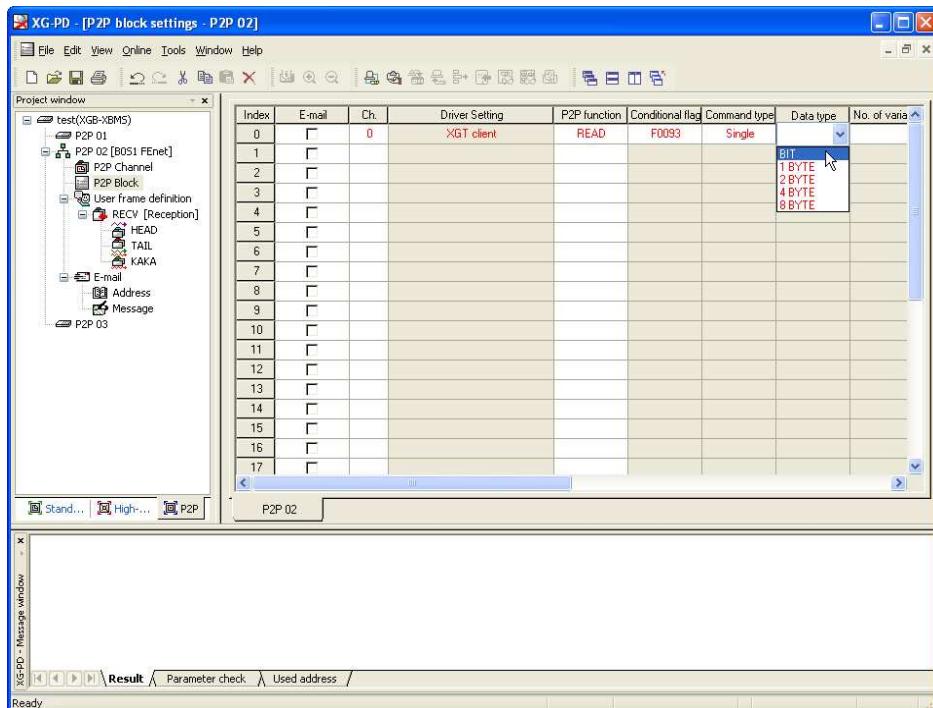

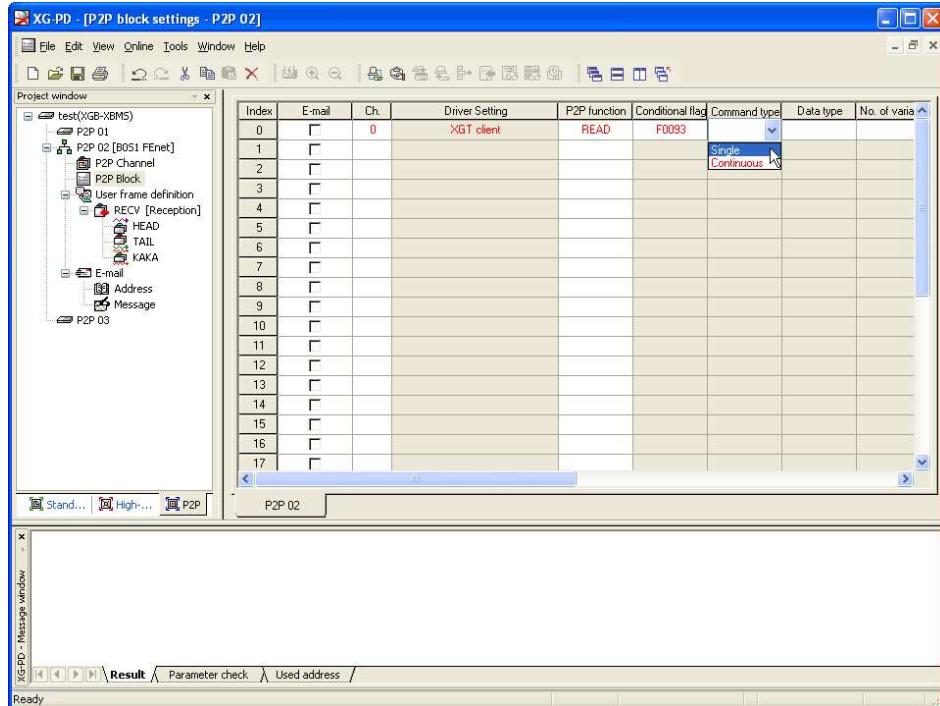

[Fig. 7-9] Setting P2P block function and operation condition

## Chapter 7 P2P Service

- (a) Select P2P function as the left screen of [Fig. 7-9]. Function can be selected by the assigned channel driver.
- (b) Client selects READ/WRITE.
- (c) Modbus TCP client selects READ/WRITE.
- (d) User frame definition selects SEND/RECEIVE.
- (e) Write operation condition as the right screen of [Fig. 7-9]. Operation condition is an internal device of XGB CPU.

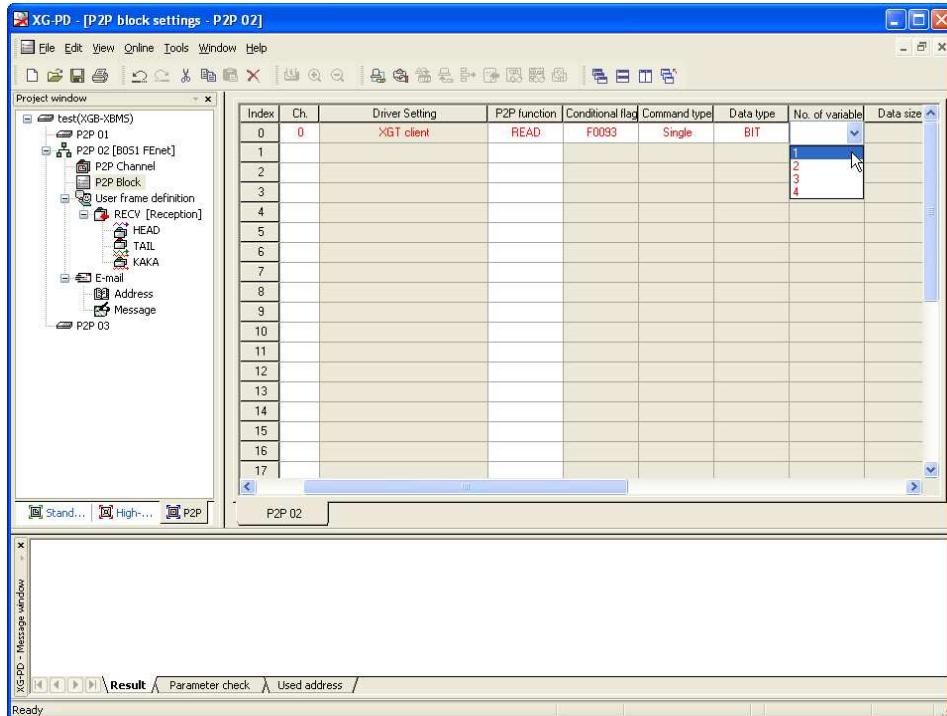

### (9) Setting P2P block type

[Fig 7-10] Setting P2P block type and data type

- (a) Select the type as the left screen of [Fig. 7-10]. Function can be selected by the assigned channel driver.
- (b) XGT client selects Single/Continuous.
- (c) Modbus TCP client selects Single/Continuous.
- (d) User frame definition can not select types.
- (e) Write operation condition as the left screen of [Fig. 7-10]. Operation condition is an internal device of XGB CPU

(10) Setting number of P2P block variables

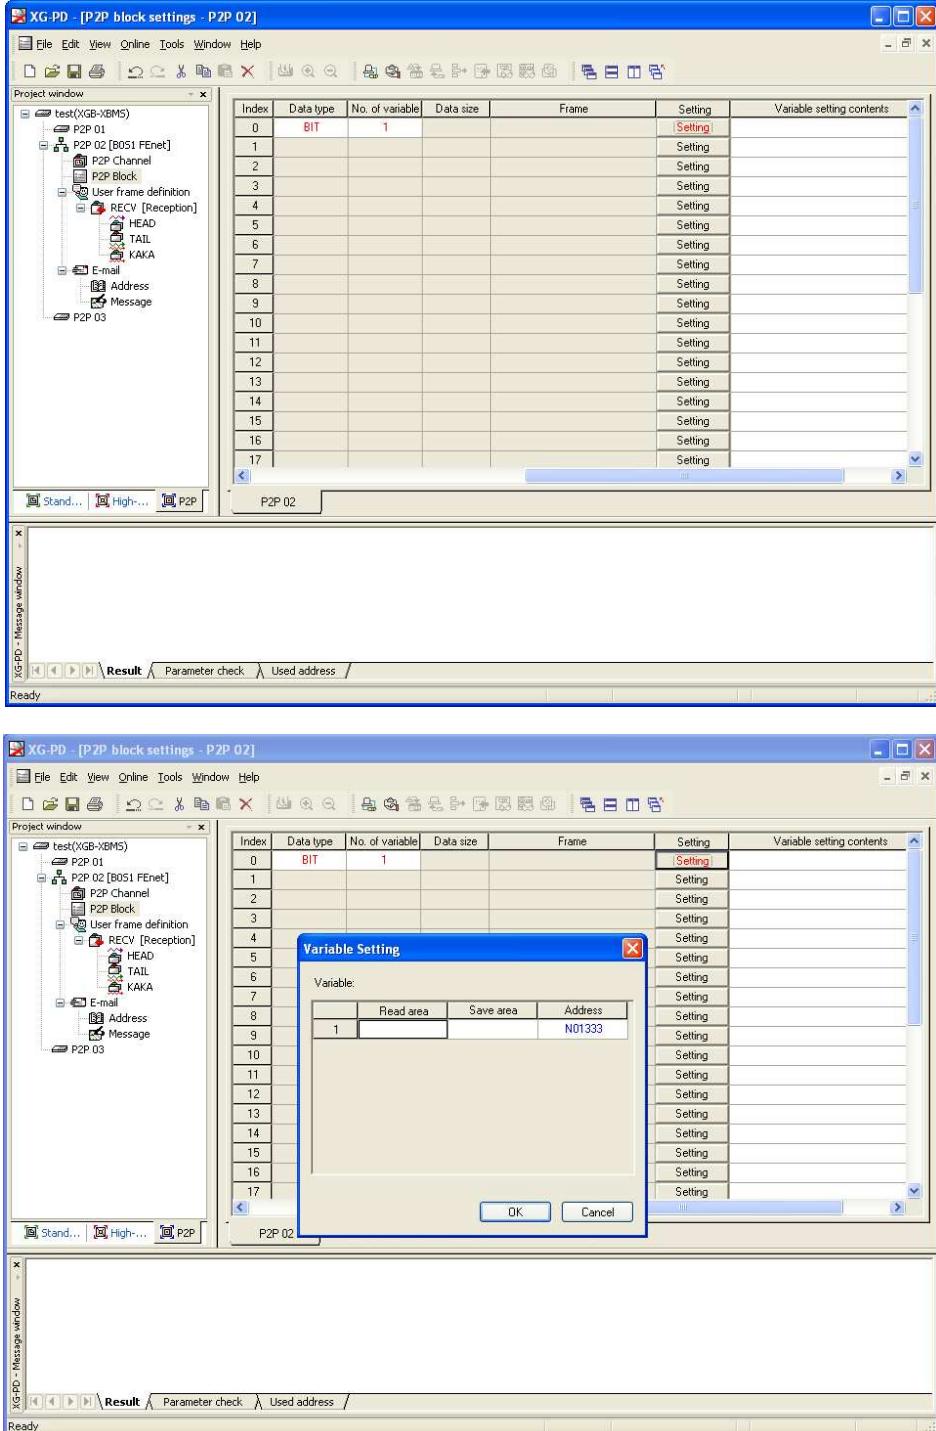

[Fig. 7-11] Setting number of P2P block variables

- (a) Set number of variables as [Fig. 7-11].
- (b) XGT client selects Single/Continuous.
- (c) Modbus TCP client is fixed as 1.
- (d) User frame definition can not select types.

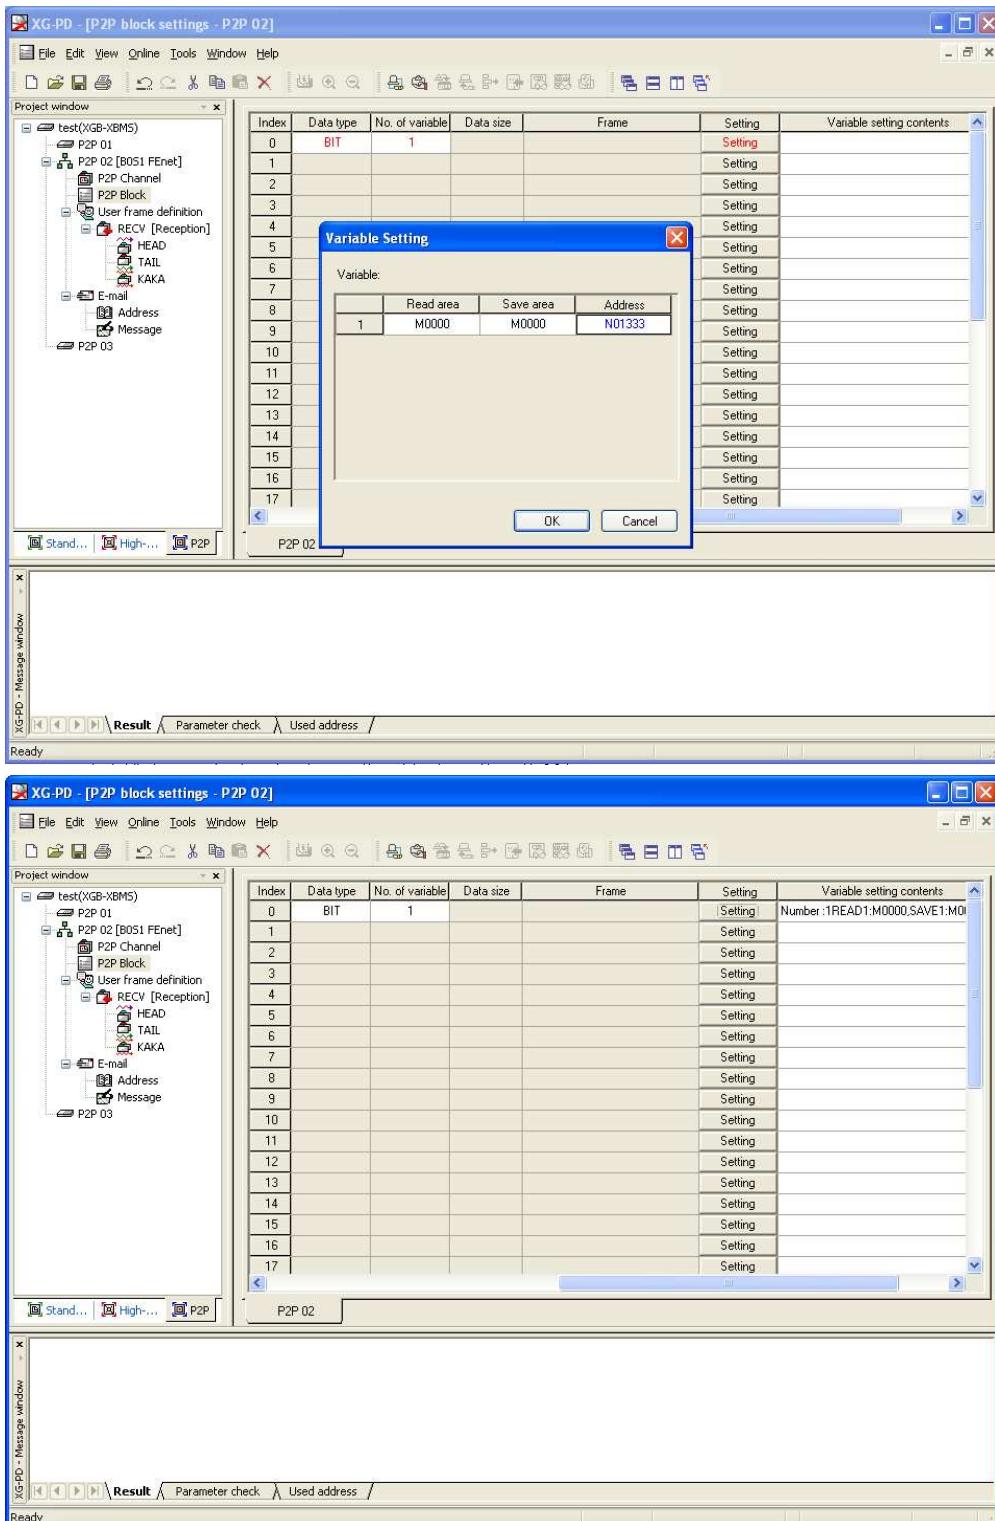

## Chapter 7 P2P Service

### (11) Setting P2P block variables

[Fig. 7-12] Setting P2P block variables

- (a) Select the variable as the left screen of [Fig. 7-12]. Double-click it.
- (b) Double-clicking shows the screen of setting variables as the right screen of [Fig. 7-12].
- (c) Write can be 1~4 variables by the setting numbers of variables.

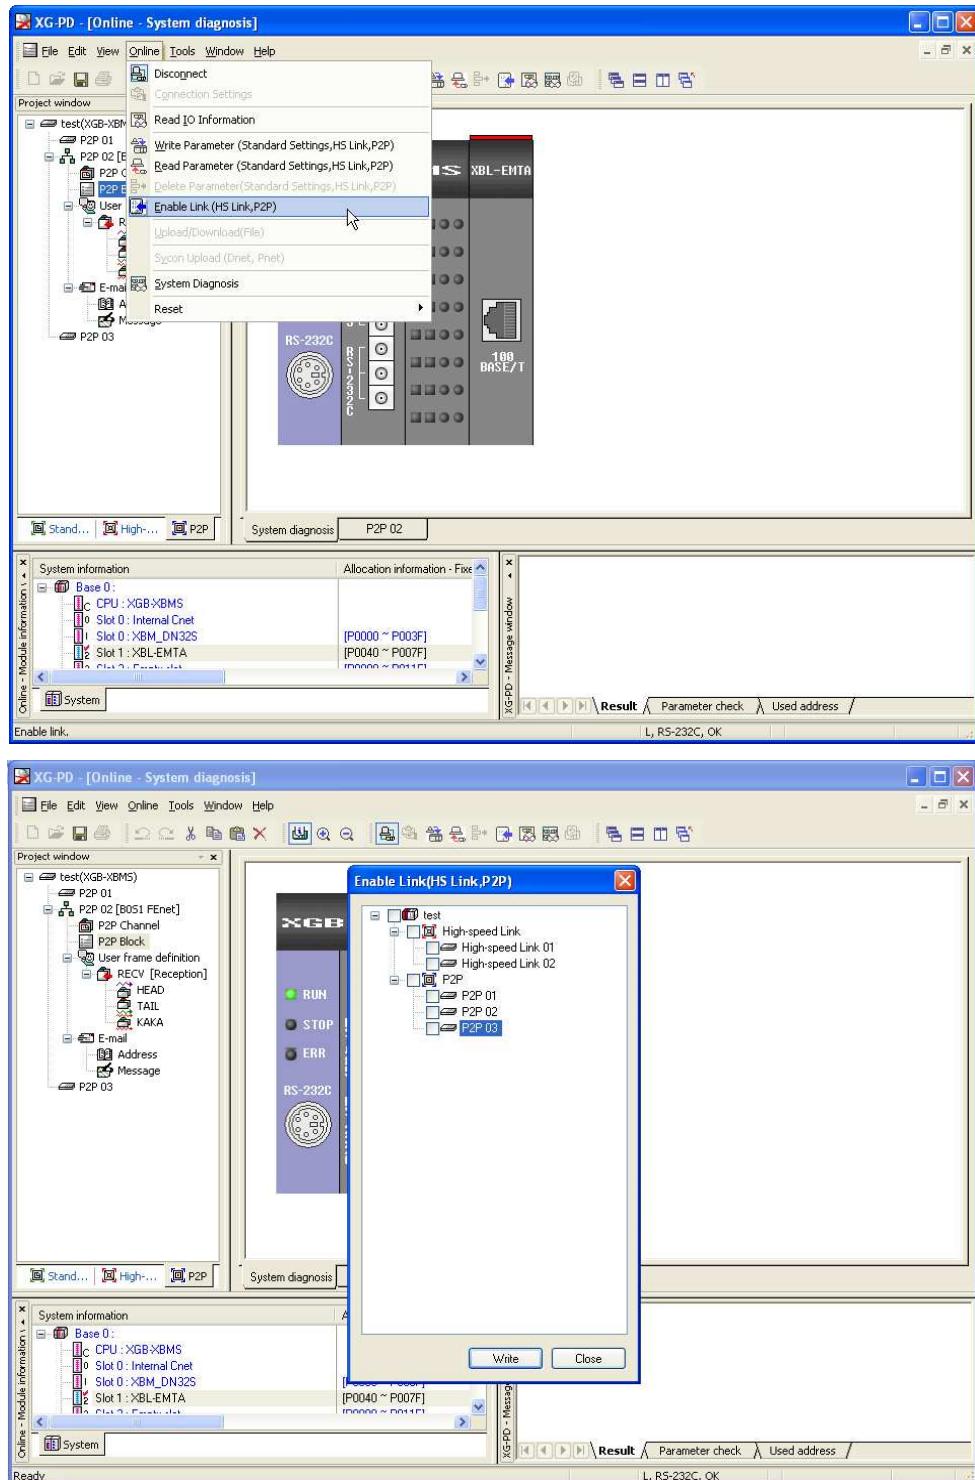

[Fig. 7-13] Finishing setting P2P block variables and setting block

- (d) Write Read area/Save area of XGB CPU as the left screen of [Fig. 7-13].
- (e) Clicking enter key finishes setting block as [Fig. 7-13].

## Chapter 7 P2P Service

### 7.2.2 Enable link

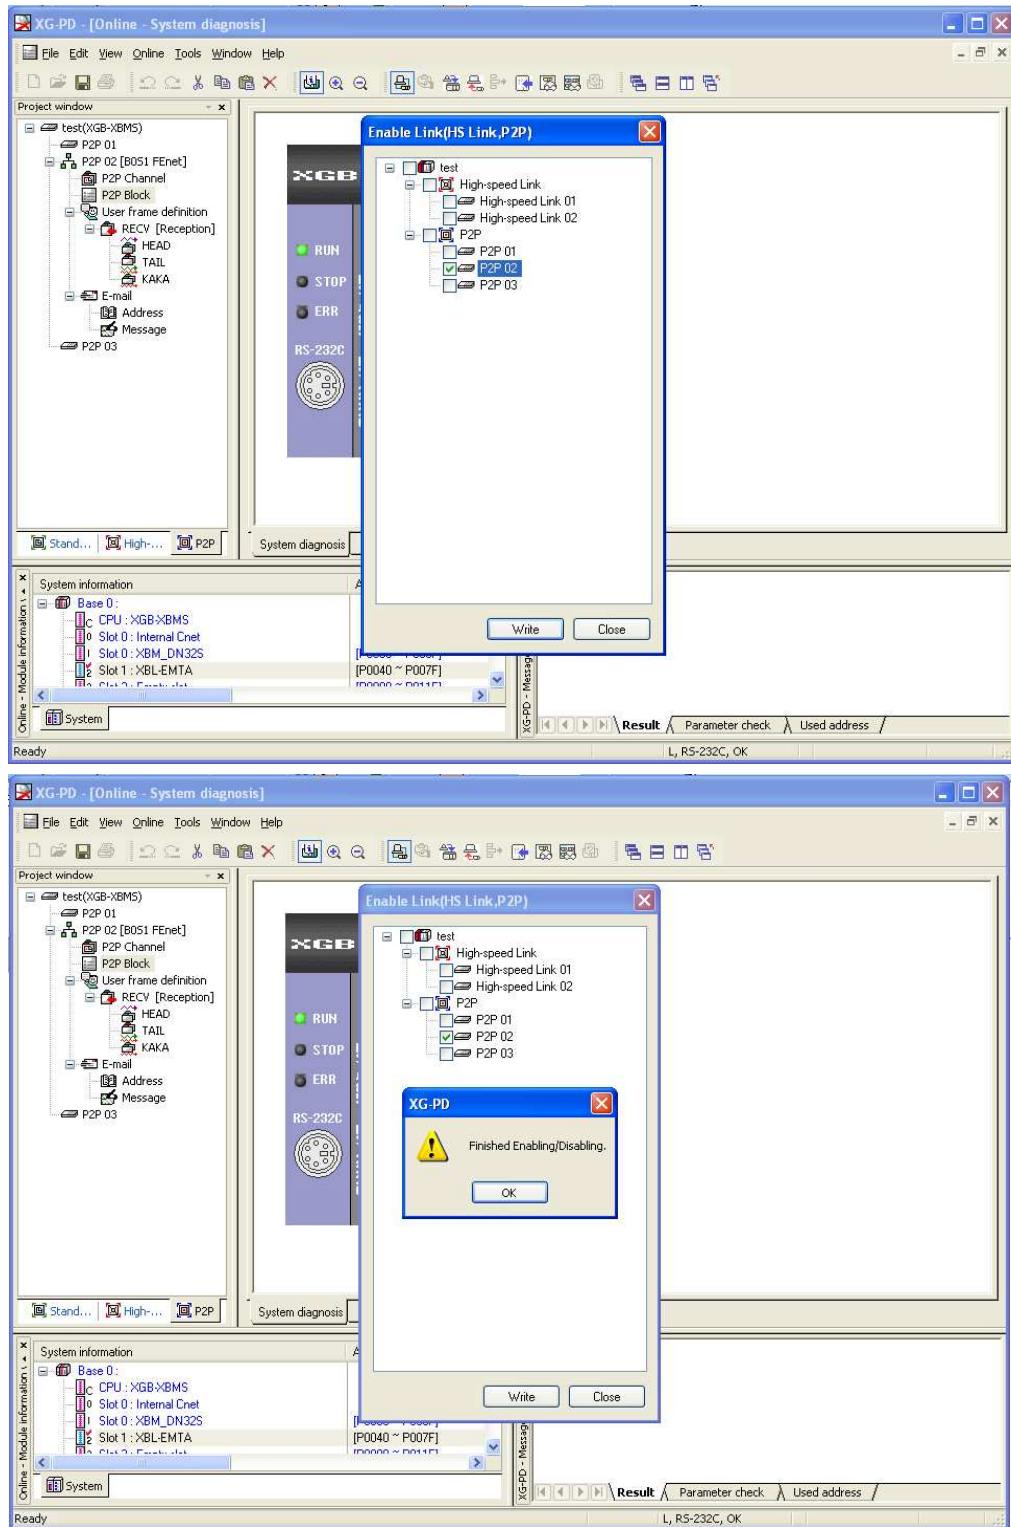

#### (1) P2P enable setting screen

[Fig. 7-14] P2P enable setting screen

- (a) After setting P2P function, P2P enable should be set to start P2P service.
- (b) Connect XG-PD as the left screen of [Fig. 7-14], Select Enable Link on Online menu.
- (c) It shows enable link screen as the right screen of [Fig. 7-14].

**(2) P2P enable**

[Fig. 7-15] P2P enable

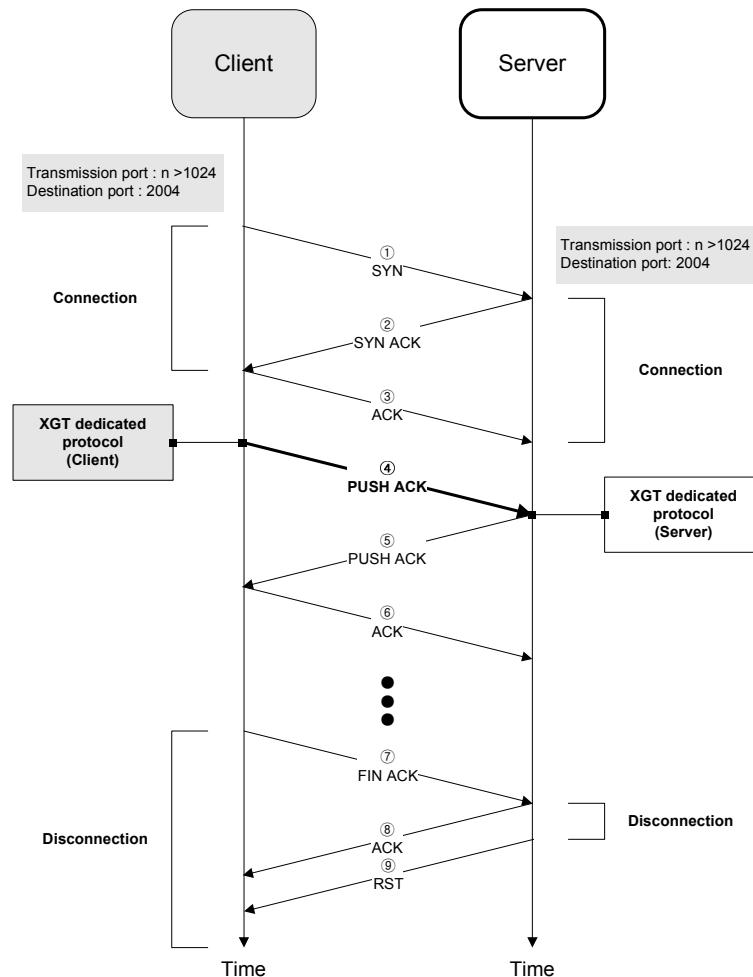

## Chapter 7 P2P Service

- (a) Select the desired P2P check box as the left screen of [Fig. 7-15], click enter key.
- (b) Clicking enter key shows finishing screen of setting as the right screen of [Fig. 8-13].

## 7.3 XGT Client

### 7.3.1 XGT client introduction

XGT Client provides a data read/write function sending request frame to server by using XGT dedicated protocol. It sends a frame when the operation condition of each block is ON. By 2 ways communication type of TCP and UDP, XBL-EMTA uses XGT client function.

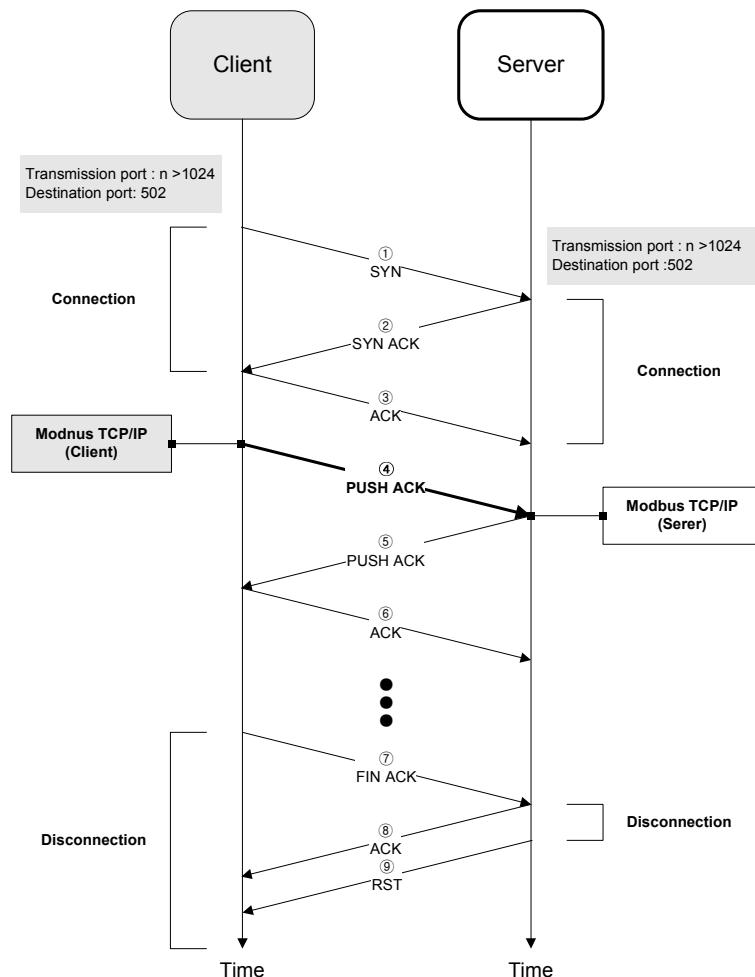

[Fig. 7-16] Setting TCP XGT client channel

### 7.4 Modbus TCP Client

#### 7.4.1 Modbus TCP Client

Modbus TCP client provides a data Read/Write function sending request frame to server using function code by Modbus TCP/IP protocol. It sends a frame when the operation condition of each block is ON.

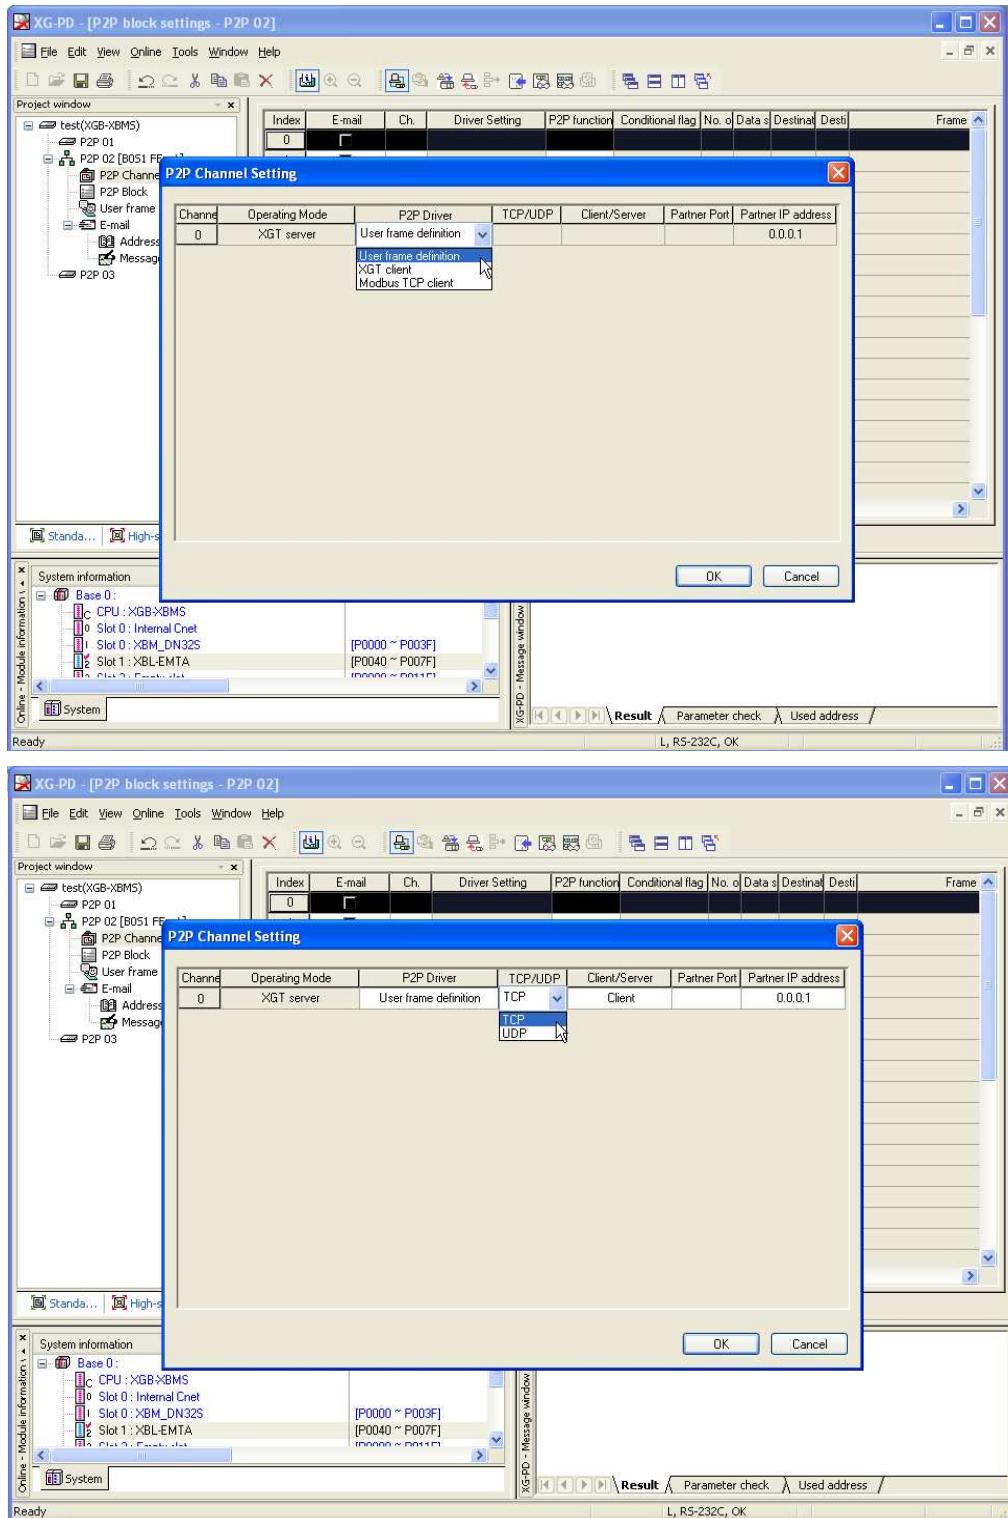

[Fig. 7-17] Setting TCP XGT client channel

## 7.5 User Frame Definition

### 7.5.1 TCP user frame definition client

#### (1) Setting user define frame channel

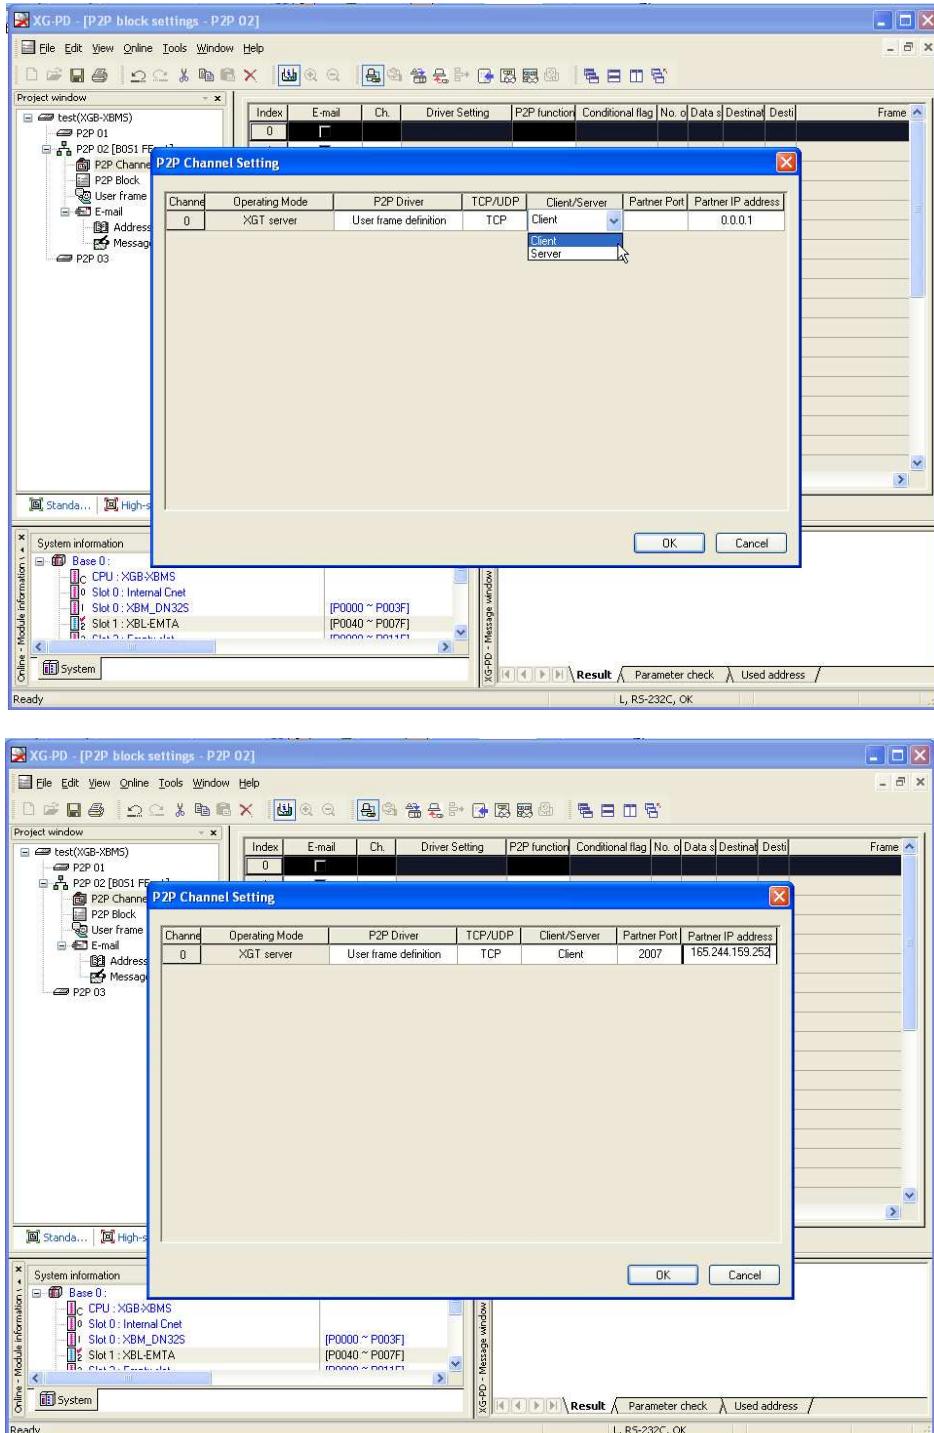

[Fig. 7-18] Setting user frame definition channel

## Chapter 7 P2P Service

- (a) Set the channel driver to user frame definition as the left screen of [Fig. 7-18].  
(b) Select TCP/UCP as the right screen of [Fig. 7-18].

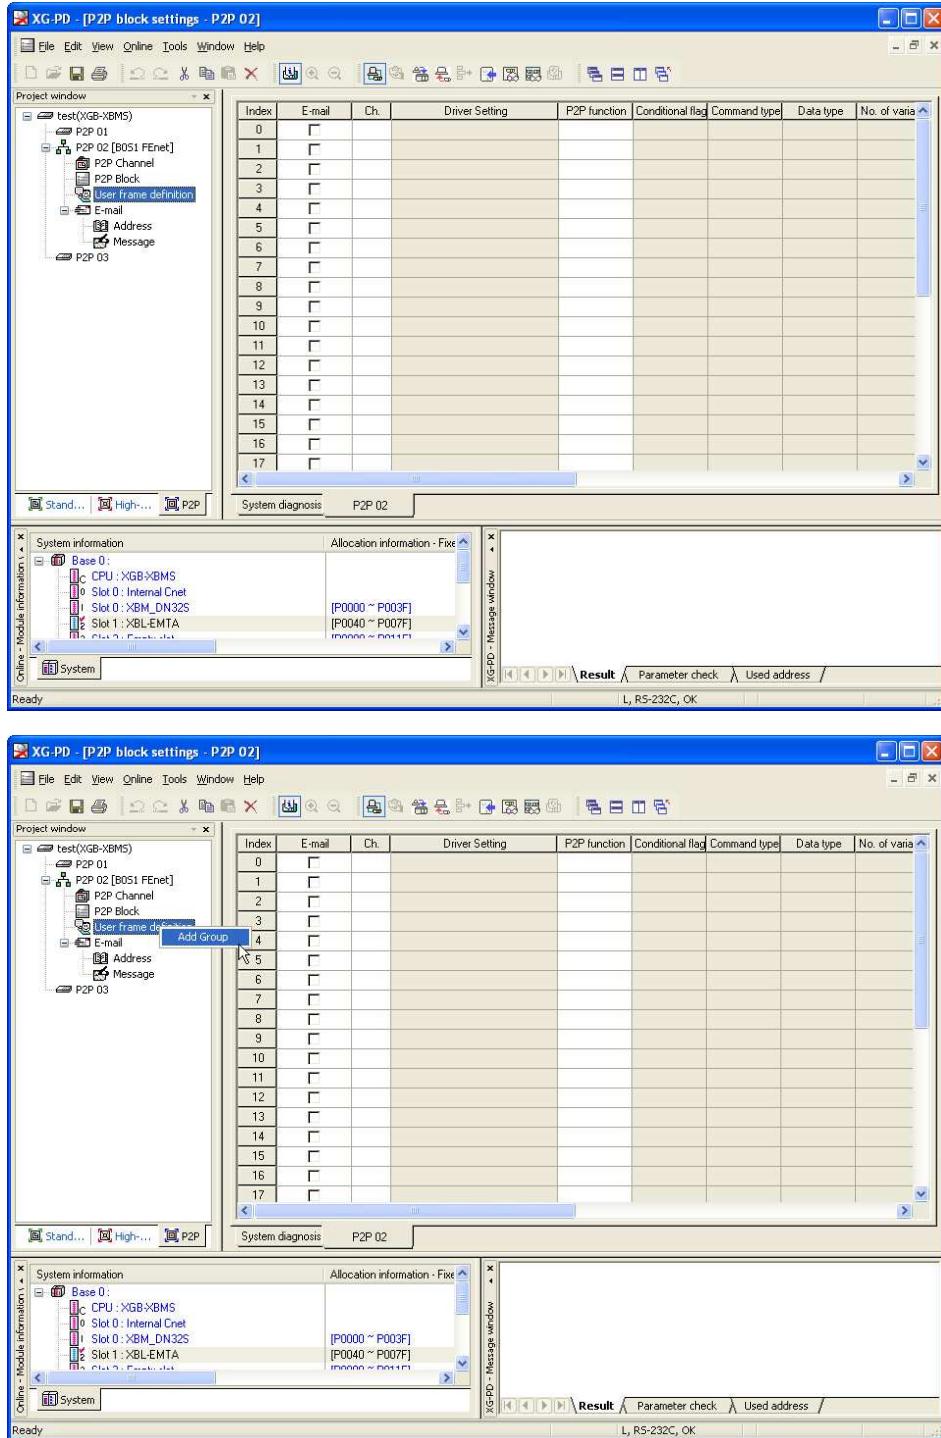

(2) Setting user frame definition port no.

[Fig. 7-19] Setting user fine frame port no

- (a) Set operation mode 'Client/Server' to Client as the left screen of [Fig. 7-19].  
 (b) Select TCP/UDP as the right screen of [Fig. 7-19], input the desired port no. and the desired destination IP address.

(3) Setting user frame definition group addition

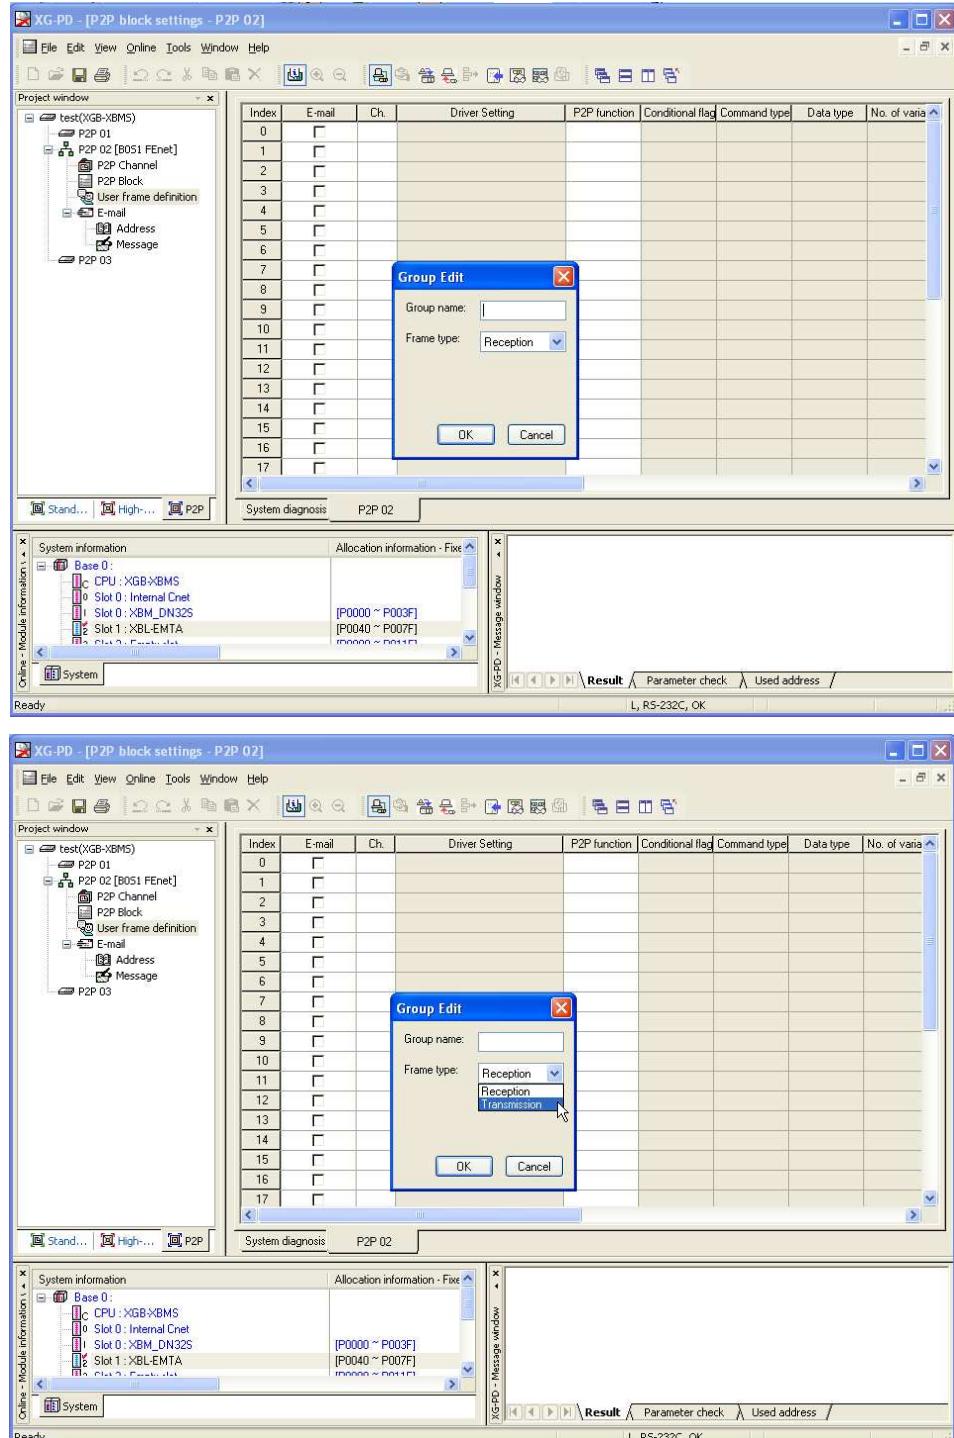

[Fig. 7-20] Setting user frame definition group addition

## Chapter 7 P2P Service

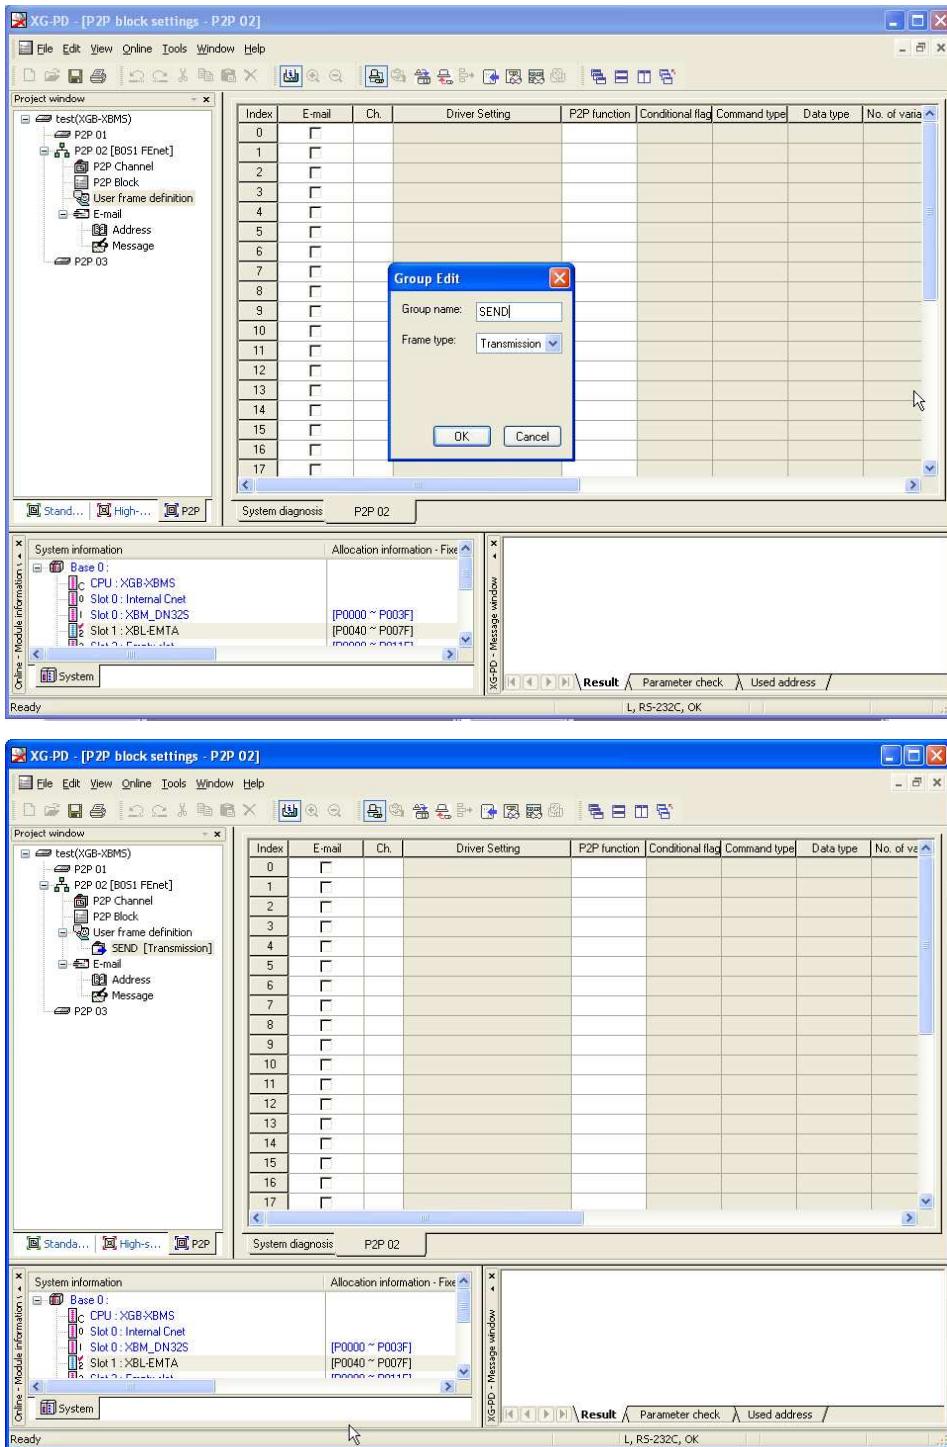

- (a) Setting user frame definition group addition of [Fig. 7-20]  
 (b) Select user frame definition group addition as the left screen of [Fig. 7-20], click right button of mouse. It shows pop-up menu 'Add Group'. Then, click it again.

- (4) Select user frame definition group name and frame type

[Fig. 7-21] Select user frame definition group name and frame type

- (a) Select user frame definition group name and frame type of [Fig. 7-21]  
 (b) Select frame type 'Transmission' on Group Edit as the left screen of [Fig. 7-21].

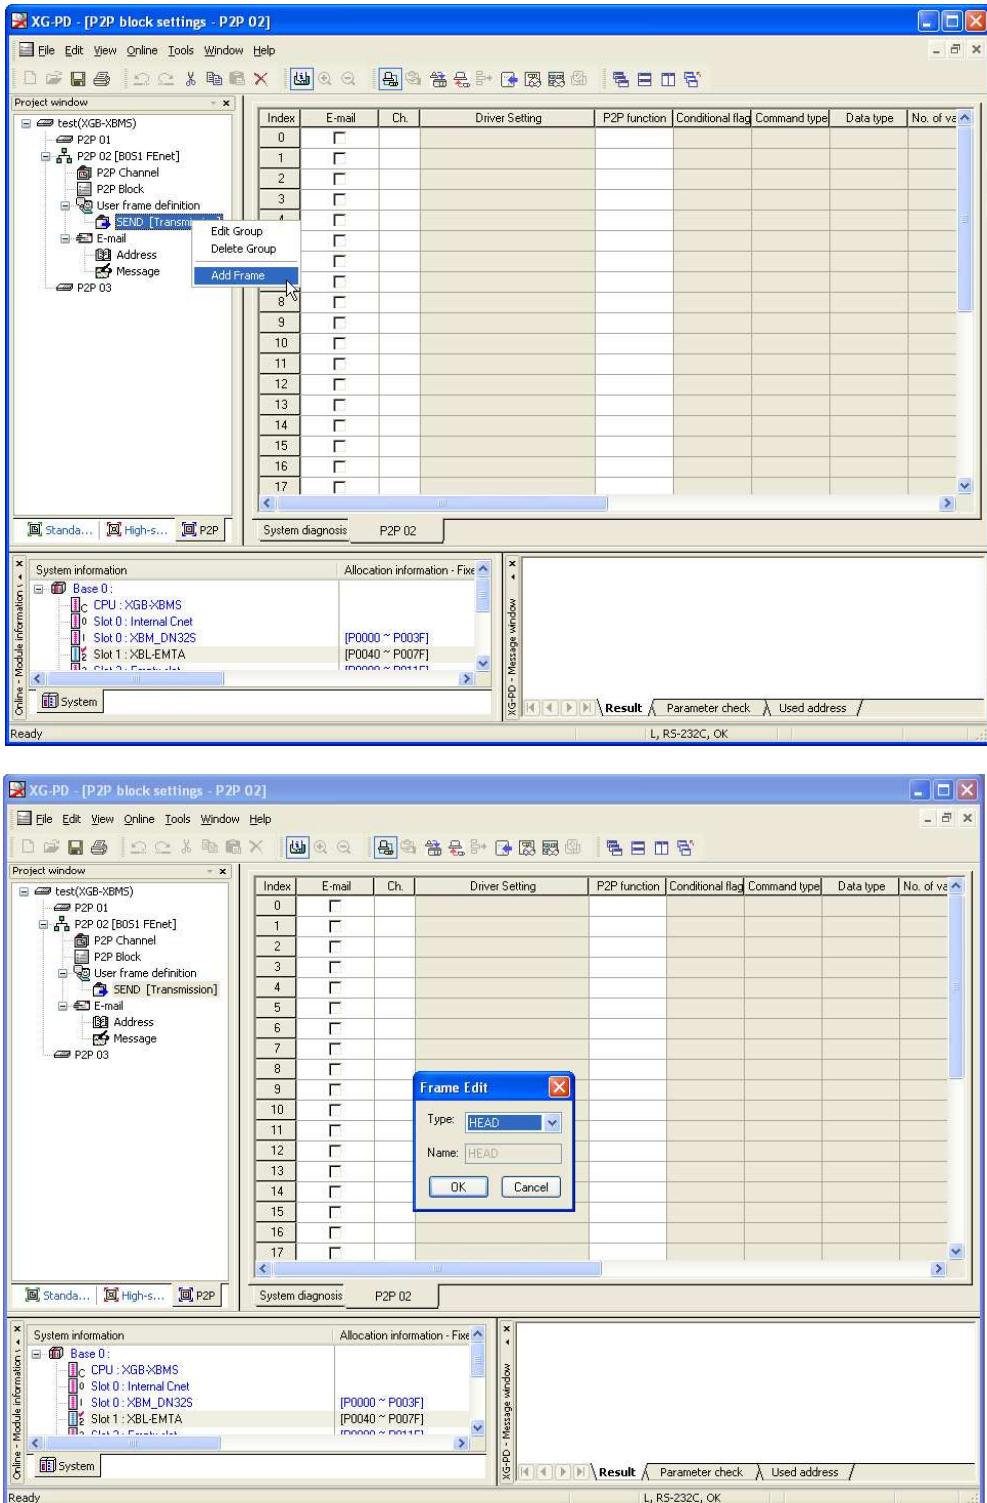

[Fig. 7-22] Finishing user frame definition group addition

- (c) Input group name in Group Edit as the left screen of [Fig.7-22]. Group name can be inputted in random.
- (d) Check input information, click enter key. It adds new group on project window as the right screen of [Fig.7-22].

## Chapter 7 P2P Service

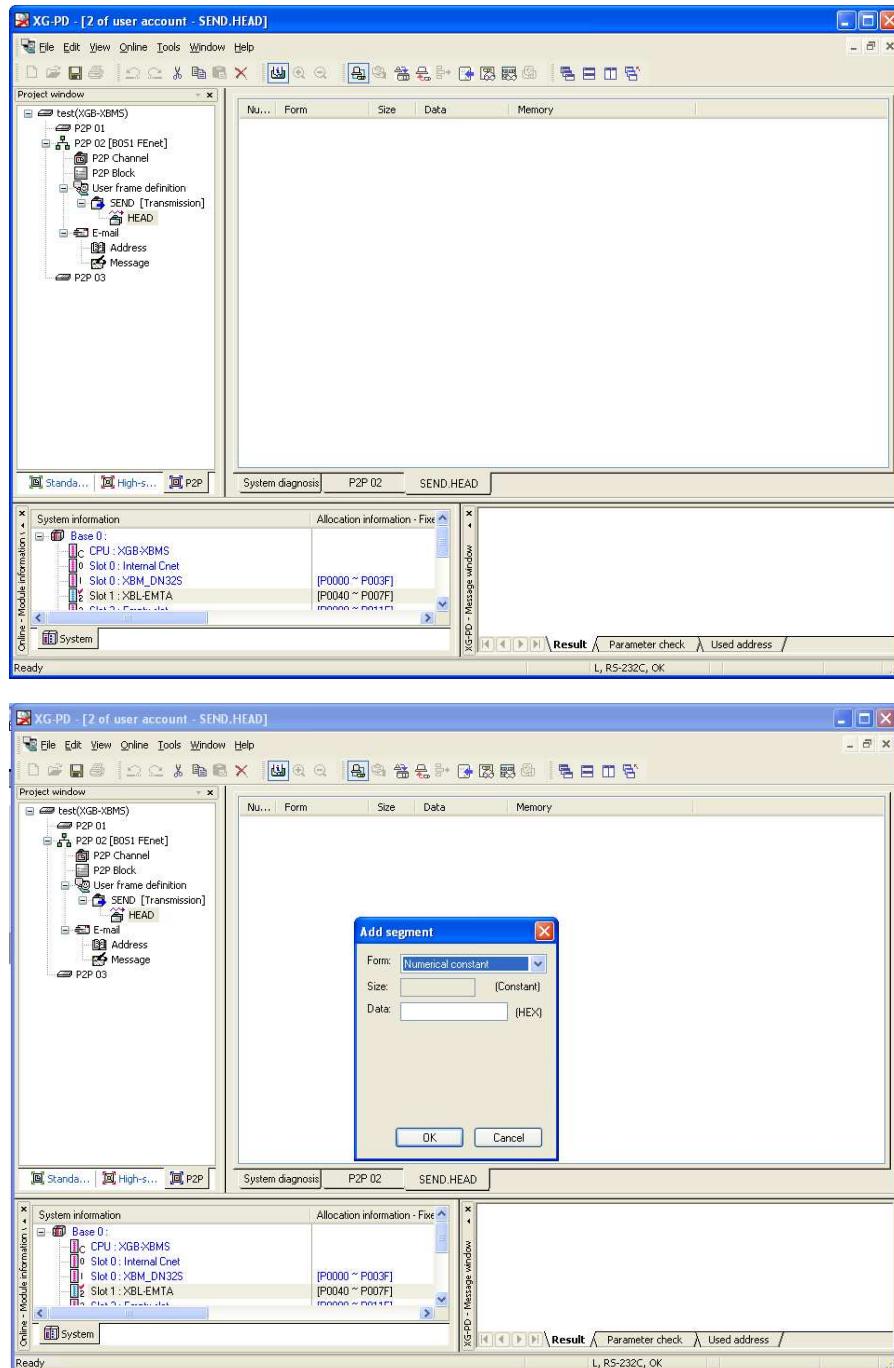

### (5) Adding user frame definition HEAD

[Fig. 7-23] Adding user frame definition HEAD

- (a) Add user frame definition HEAD as [Fig. 7-23].
- (b) Click right button of mouse on the added group as the left screen of [Fig. 7-23]. It shows pop-up menu 'Edit Group/Delete Group/Add Frame'.
- (c) Select Add Frame, then click mouse. It shows frame edit window as the right screen of [Fig. 7-23].
- (d) Select type-'HEAD', click enter key.
- (e) Clicking enter key, it add HEAD on group of project window as the left screen of [Fig. 7-23].

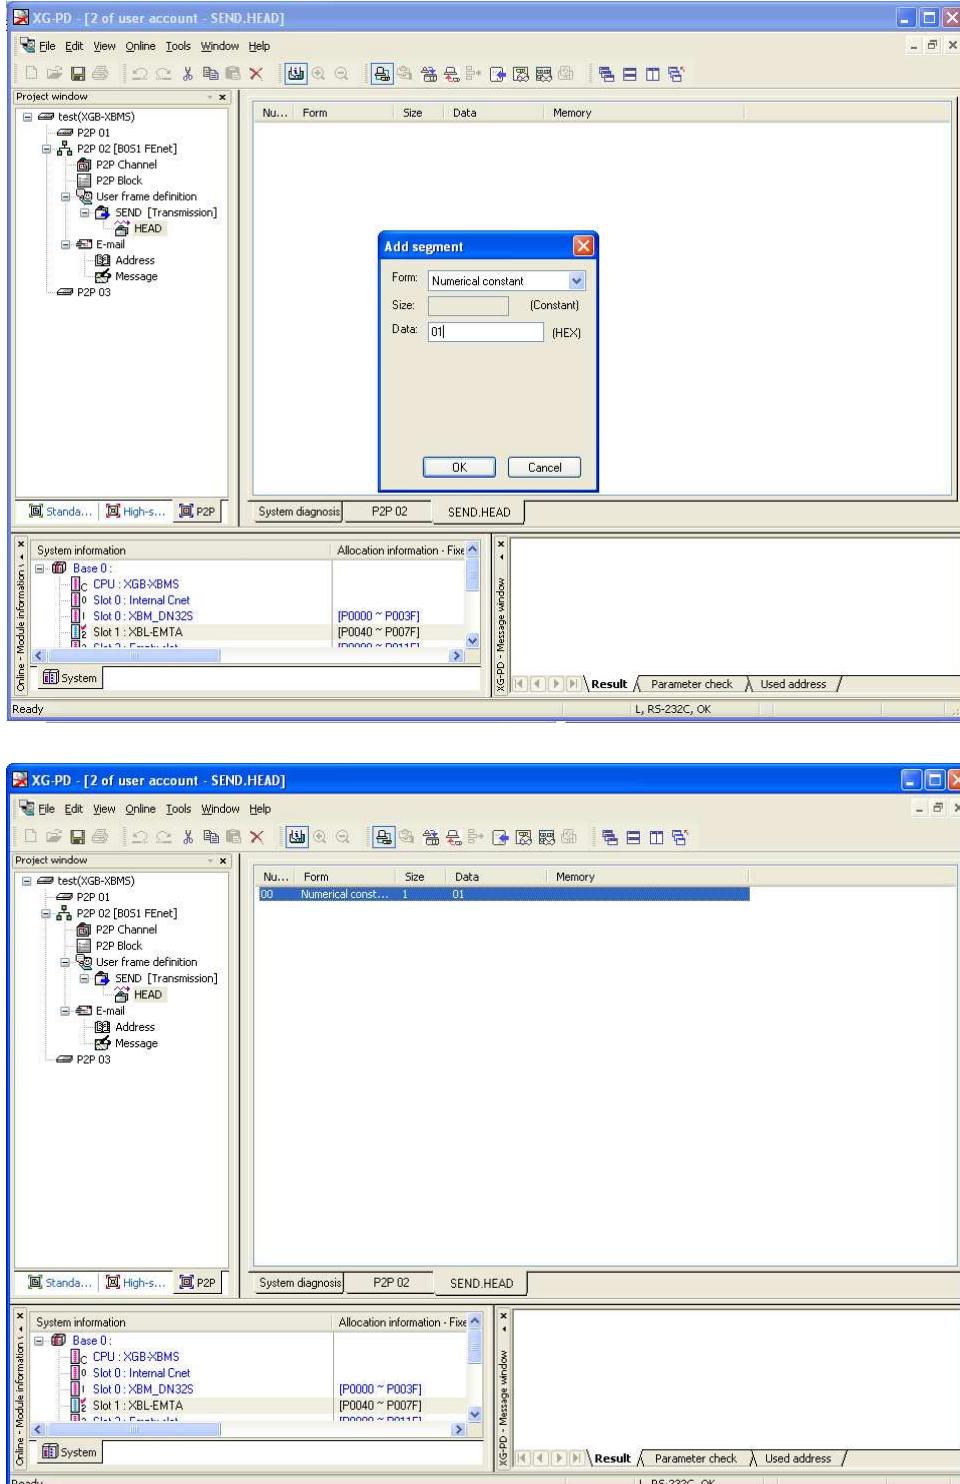

(6) Adding user frame definition HEAD segment

[Fig. 7-24] Adding user frame definition HEAD segment

## Chapter 7 P2P Service

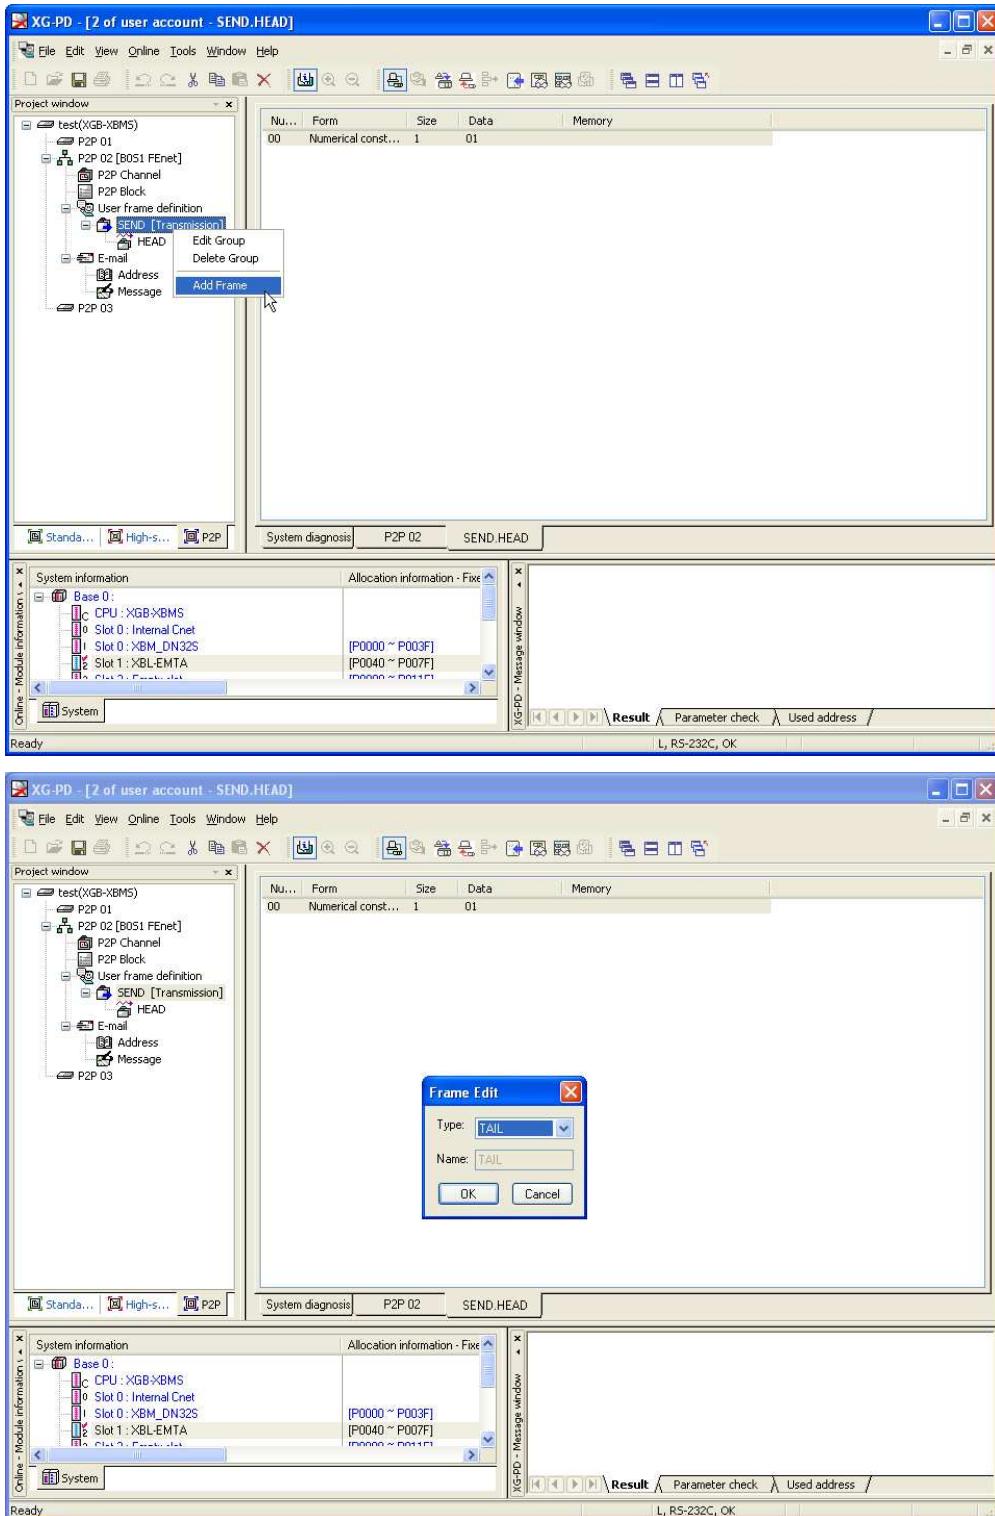

- (a) Double-click SEND.HEAD area as the left screen of [Fig. 7-24]. It shows segment adding window.
- (b) Select type 'Numerical constant' on Add segment.

[Fig. 7-25] Finishing user frame definition HEAD segment input

- (c) Input data as the left screen of [Fig. 7-25], then click enter key.
- (d) Clicking enter key finishes segment adding as the left screen of [Fig. 7-25].

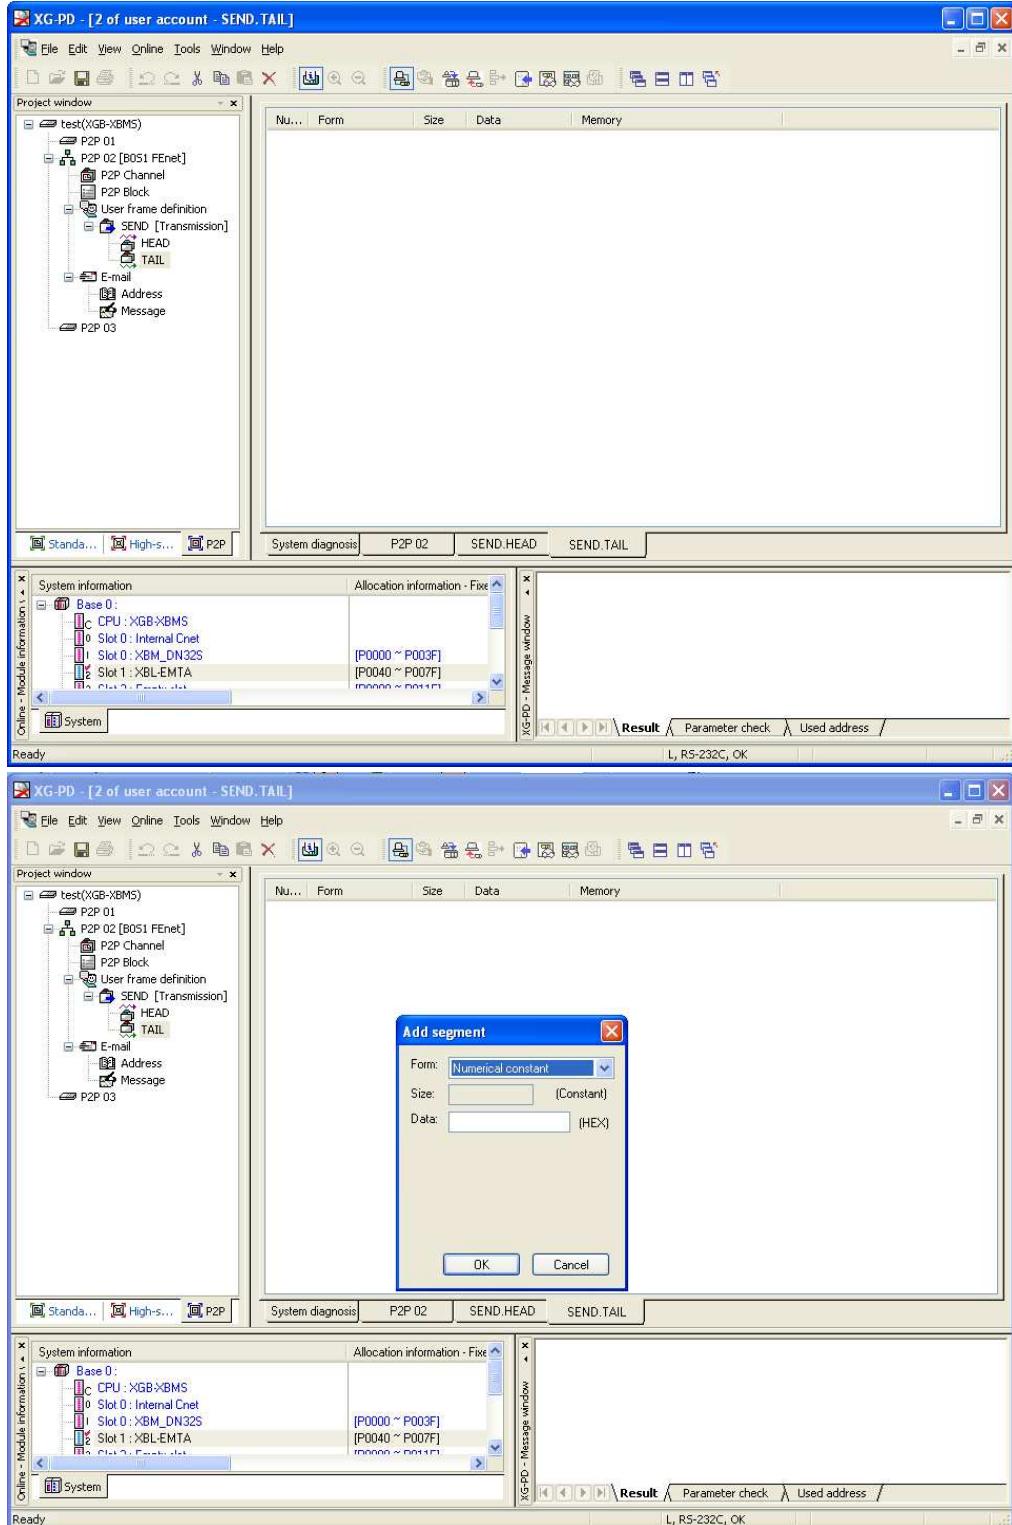

(7) Adding user frame definition TAIL

[Fig. 7-26] Adding user frame definition TAIL

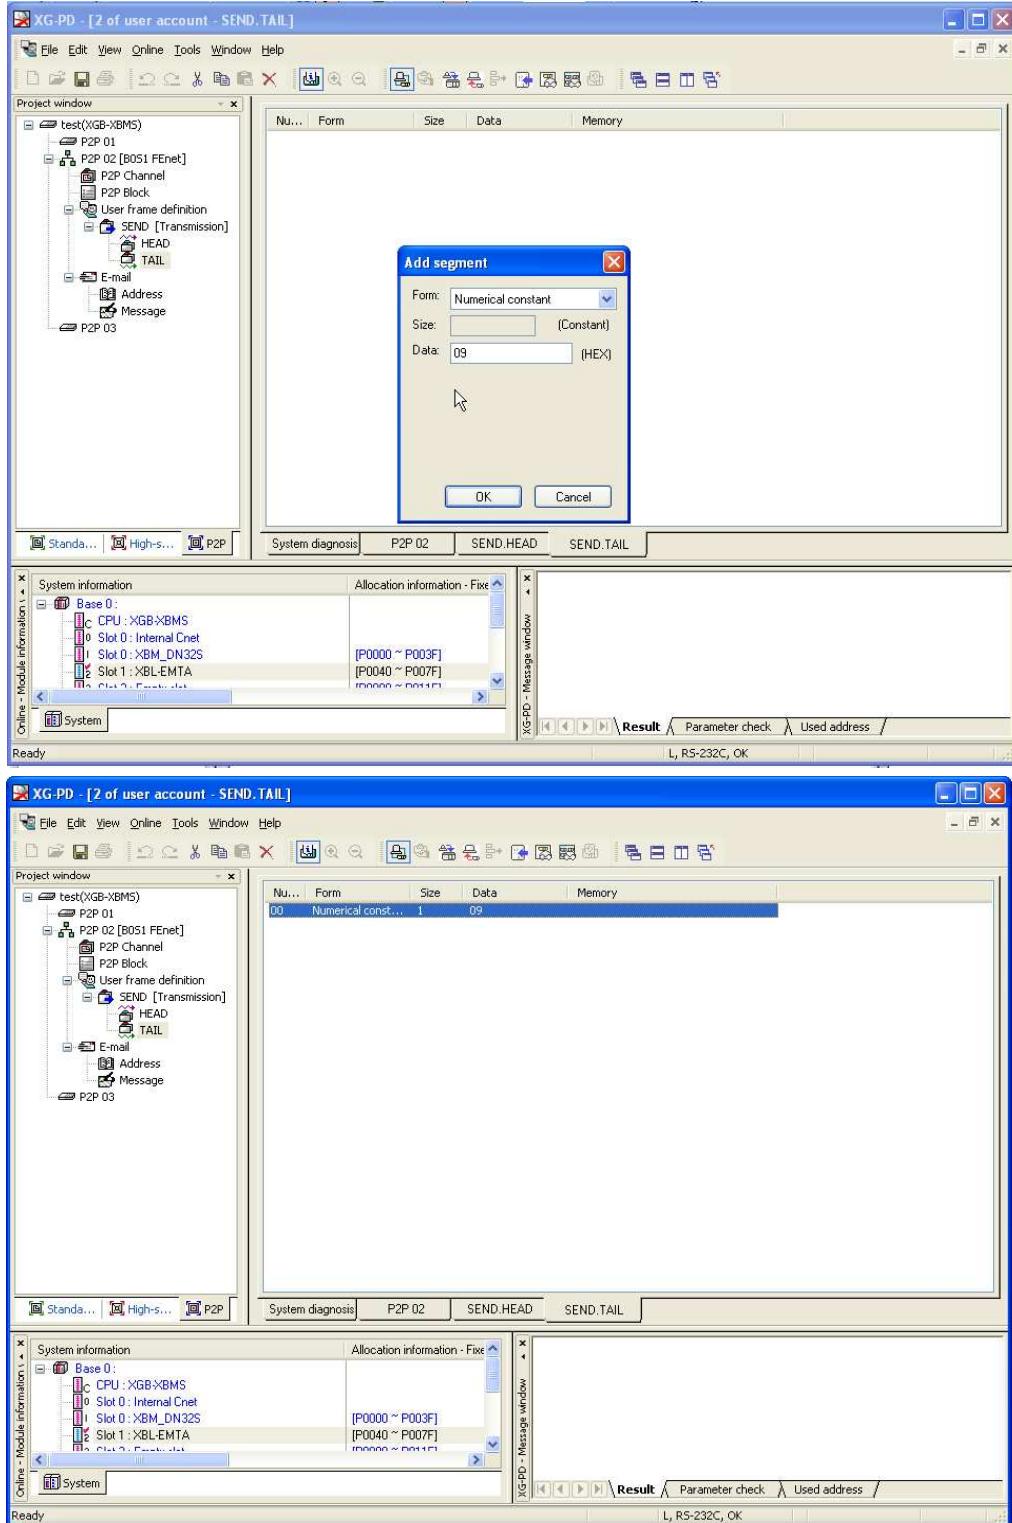

## Chapter 7 P2P Service

- (a) Click right button of mouse on the added group as the left screen of [Fig. 7-26]. It shows pop-up menu ‘Edit Group/Delete Group/Add Frame’.
  - (b) Select Add Frame, click mouse. It shows frame edit window as the right screen of [Fig. 7-26].
  - (c) Select type ‘TAIL’, click enter key.
  - (d) Clicking enter key adds TAIL on the project window as the left screen of [Fig. 7-26].
- (8) Adding user frame definition TAIL segment

[Fig. 7-27] Adding user frame definition TAIL segment

- (a) Double-click SEND.TAIL area as the left screen of [Fig.7-27]. It shows segment adding window.  
 (b) Select type 'Numerical Constant' on Add segment.

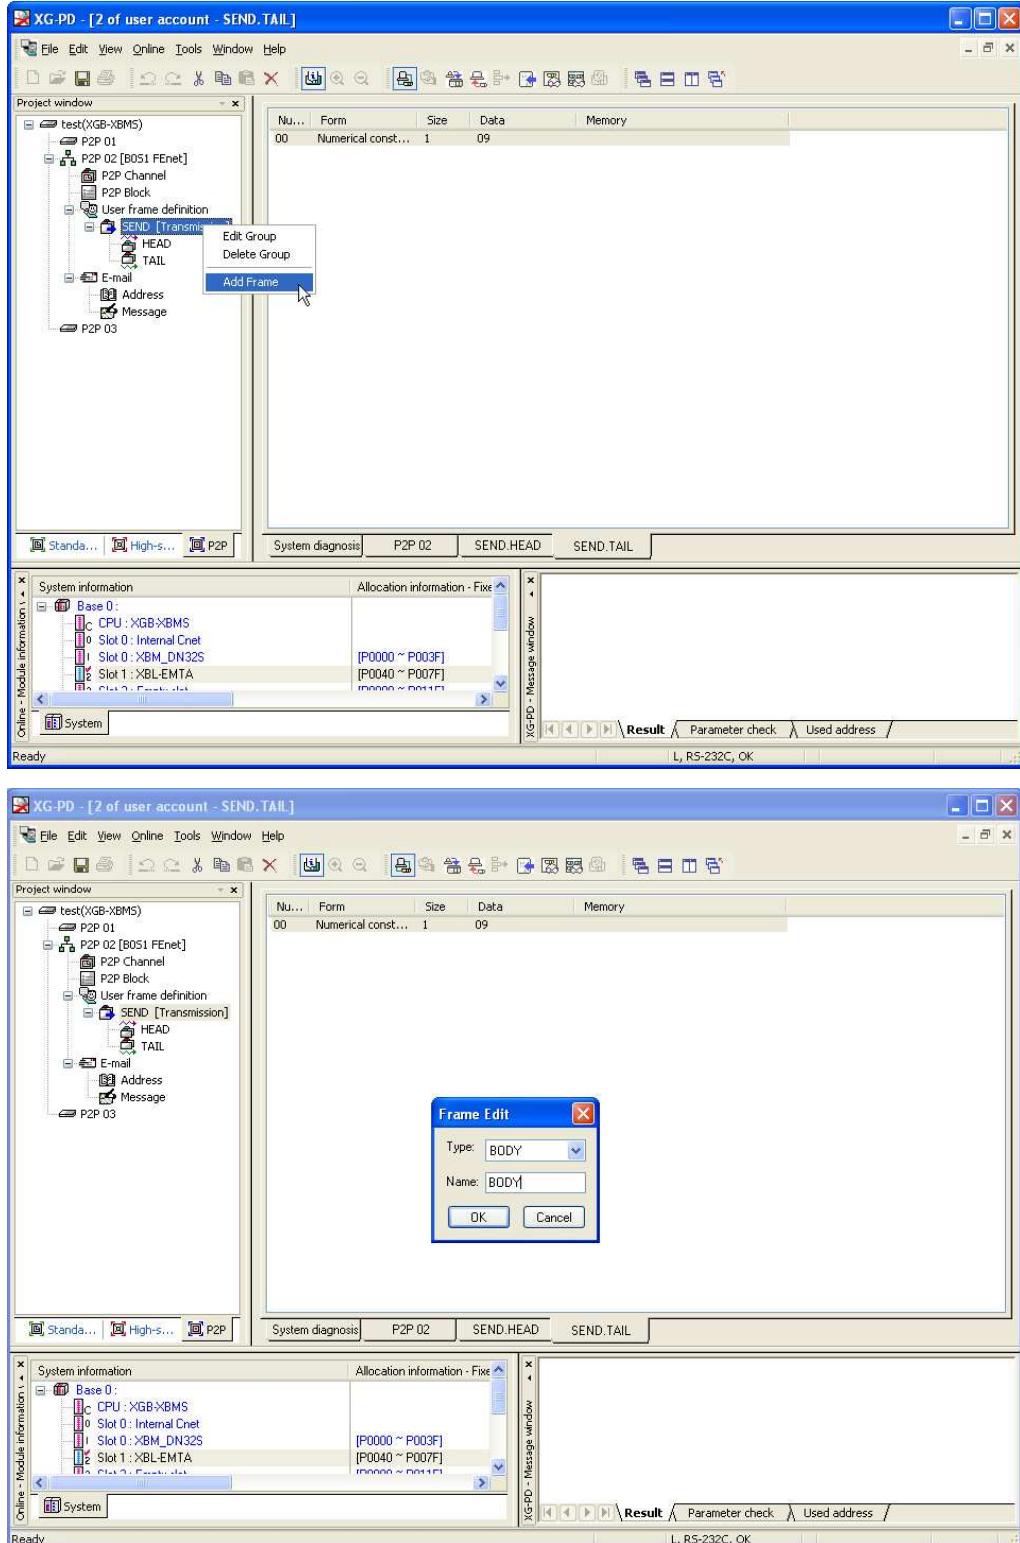

[Fig. 7-28] Finishing user frame definition TAIL segment input

## Chapter 7 P2P Service

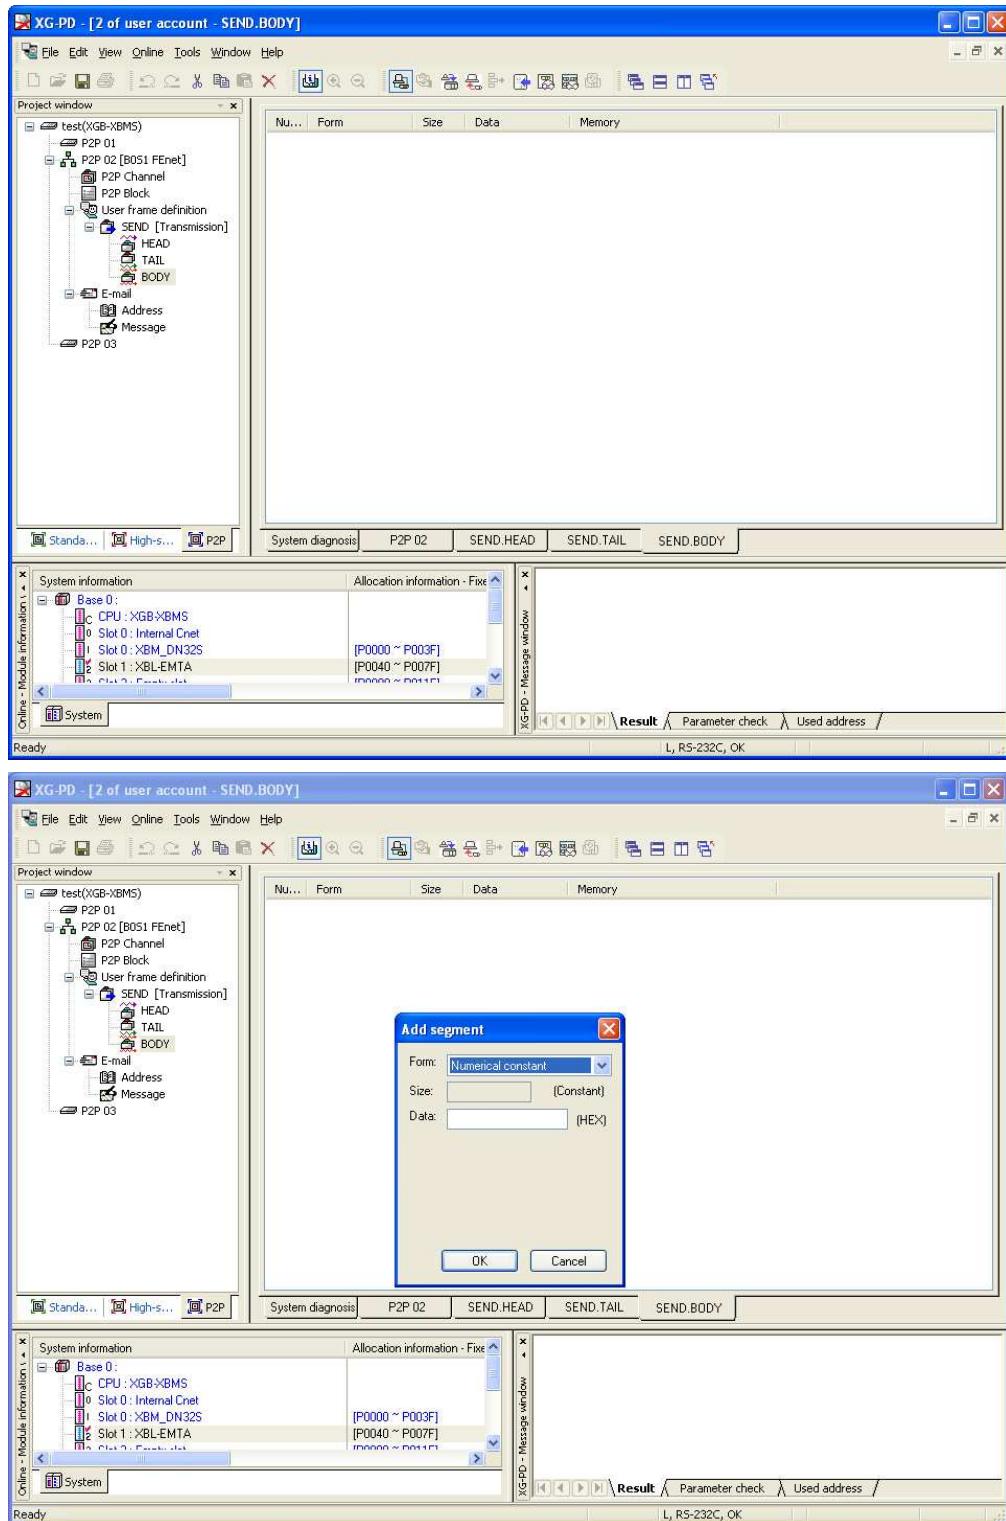

- (c) Input data as the left screen of [Fig. 7-28], click enter key.  
(d) Clicking enter key finishes segment adding as the left screen of [Fig.7-28].

### (9) Adding user frame definition BODY

[Fig. 7-29] Adding user frame definition BODY

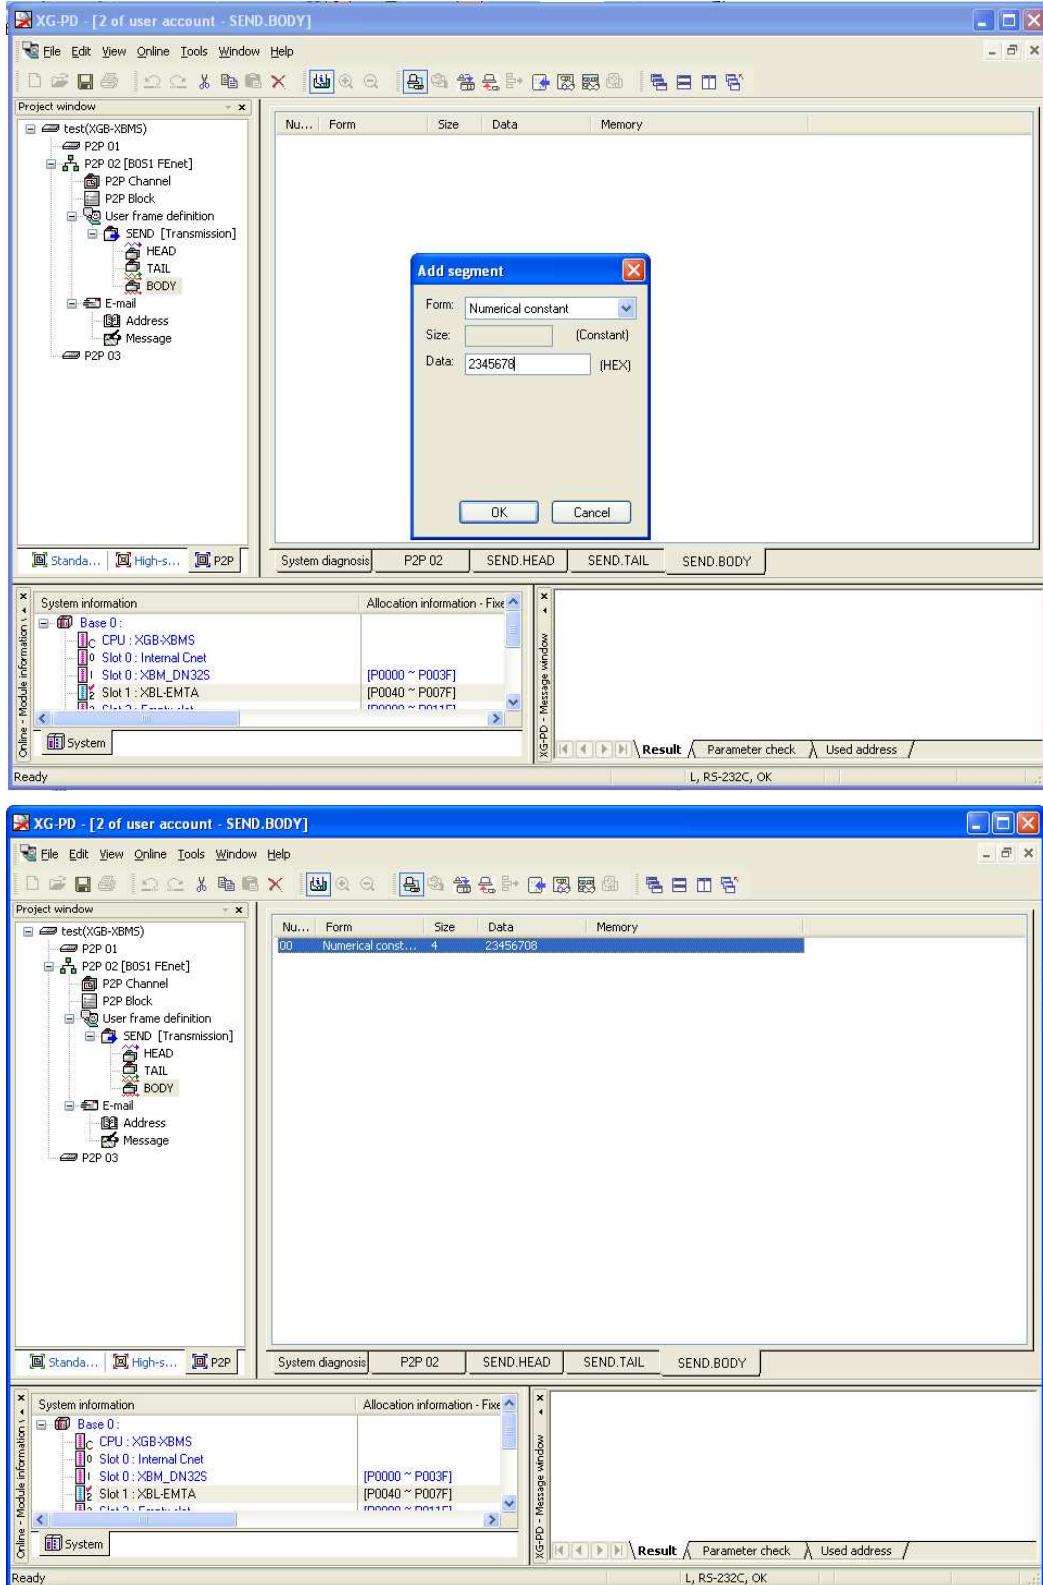

- (a) Click right button of mouse on added group as the left screen of [Fig. 7-29]. It shows pop-up menu 'Edit Group /Delete Group/Add Frame'.
- (b) Select Add Frame, click mouse. It shows Frame Edit window as the right screen of [Fig. 7-29].
- (c) Select type 'BODY', click enter key.
- (d) Clicking enter key adds BODY as the left screen of [Fig. 7-29].

[Fig. 7-30] Adding user frame definition BODY

## Chapter 7 P2P Service

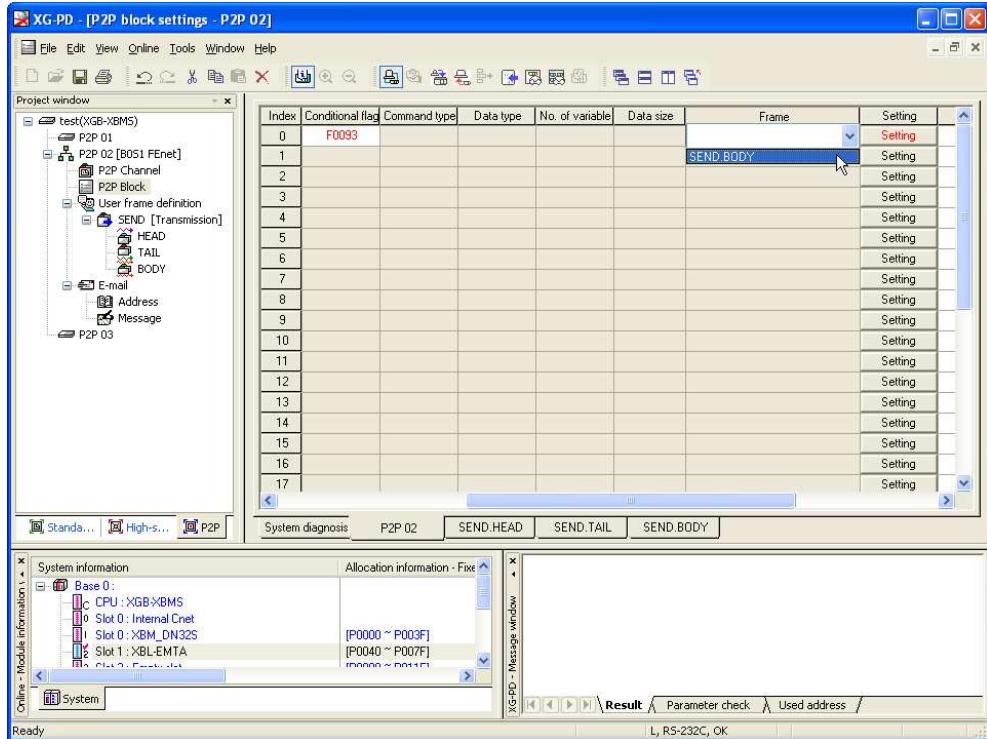

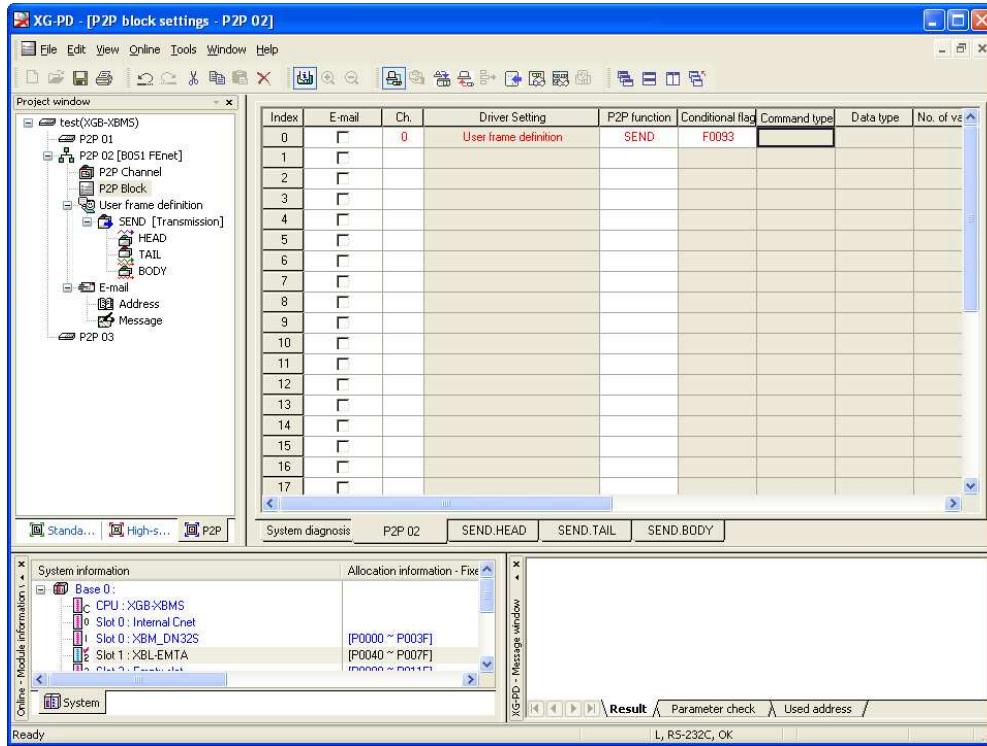

- (e) Double-click SEND.TAIL area as [Fig.7-30]. It shows segment adding window.  
(f) Select type 'Numerical Constant' on Add segment.

[Fig. 7-31] Finishing setting user frame definition segment addition

- (g) Input data as the left screen of [Fig.7-31], click enter key.  
 (h) Clicking enter key finishes segment adding as the left screen of [Fig.7-31].

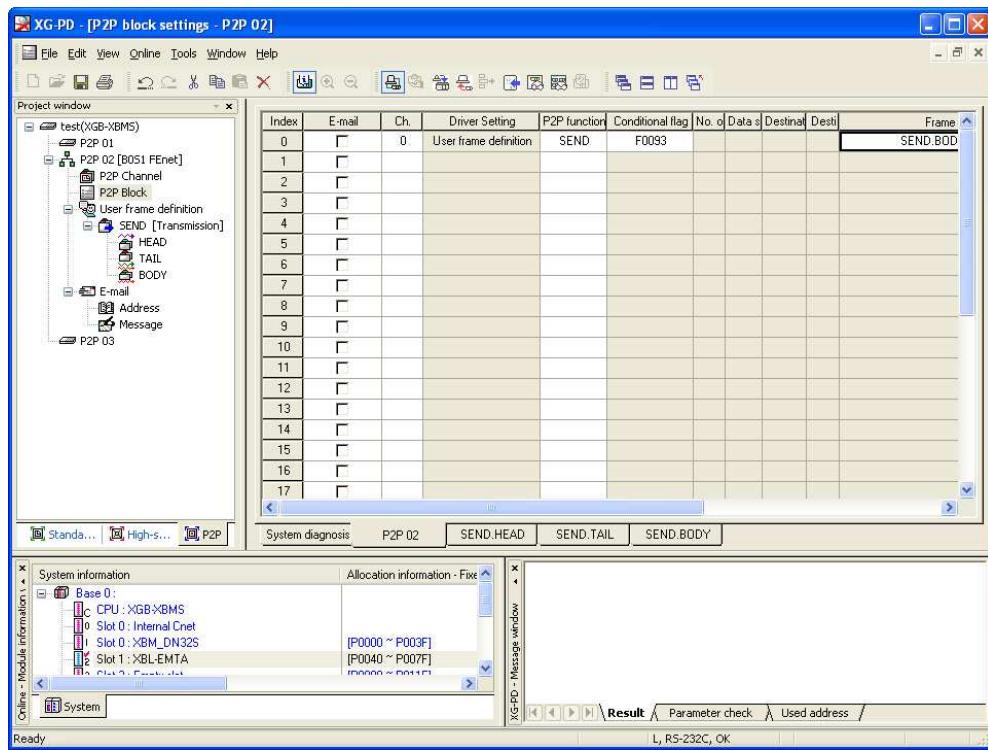

(10) Setting user frame definition block and selecting frame

[Fig. 7-32] Setting user frame definition block and selecting frame

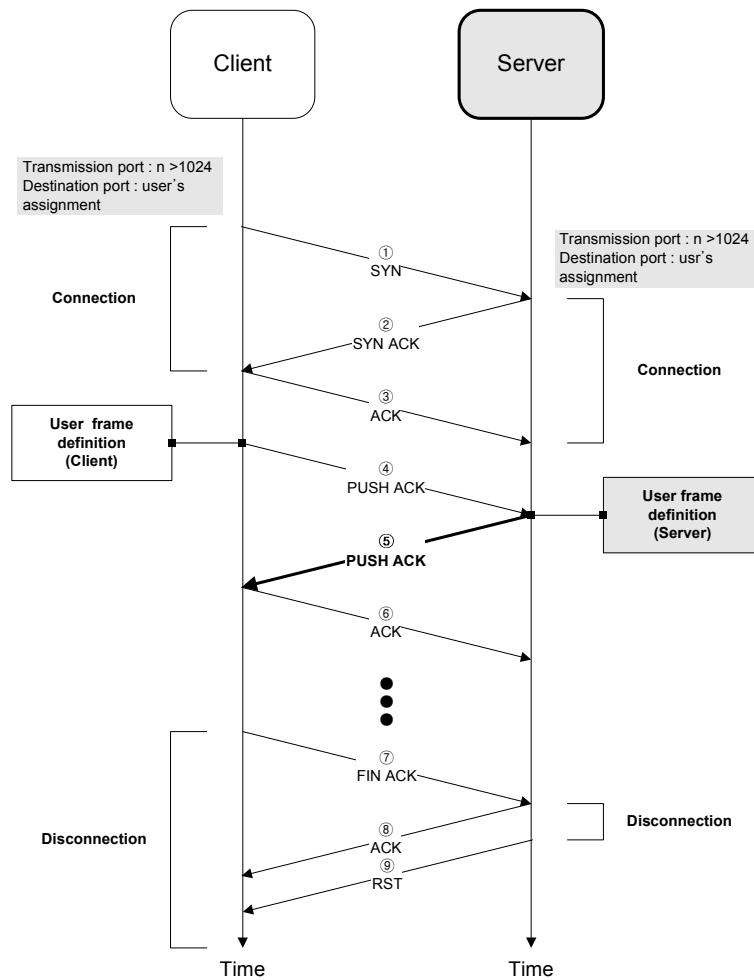

## Chapter 7 P2P Service

- (a) Registered group frame can be selected when the setting driver is user frame definition.  
(b) Selecting frame finishes setting block as [Fig.7-32].

[Fig. 7-33] Finishing user frame definition block setting

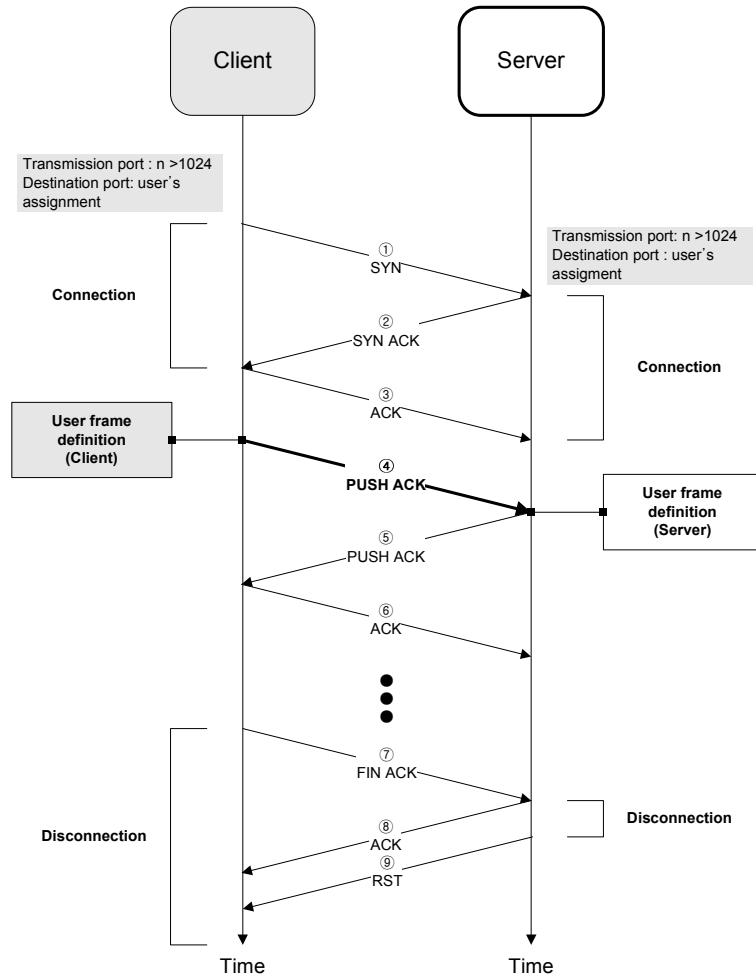

### 7.5.2 TCP/UDP user frame definition server

[Fig. 7-34] TCP user define frame server

- (1) TCP user frame definition server provides a function receiving the registered frame as the receiving block to the user's assigned port.
- (2) In case of '□SYN -> □SYN ACK -> □ACK (Connection)-> the registered frame in reception block 's received from client', TCP user define frame treats the block.
- (3) TCP user define frame does not receive if the port or frame type is different.
- (4) In case of receiving registered frame in reception block to the block, UDP user frame server does receive.

### 7.5.3 TCP user frame definition client

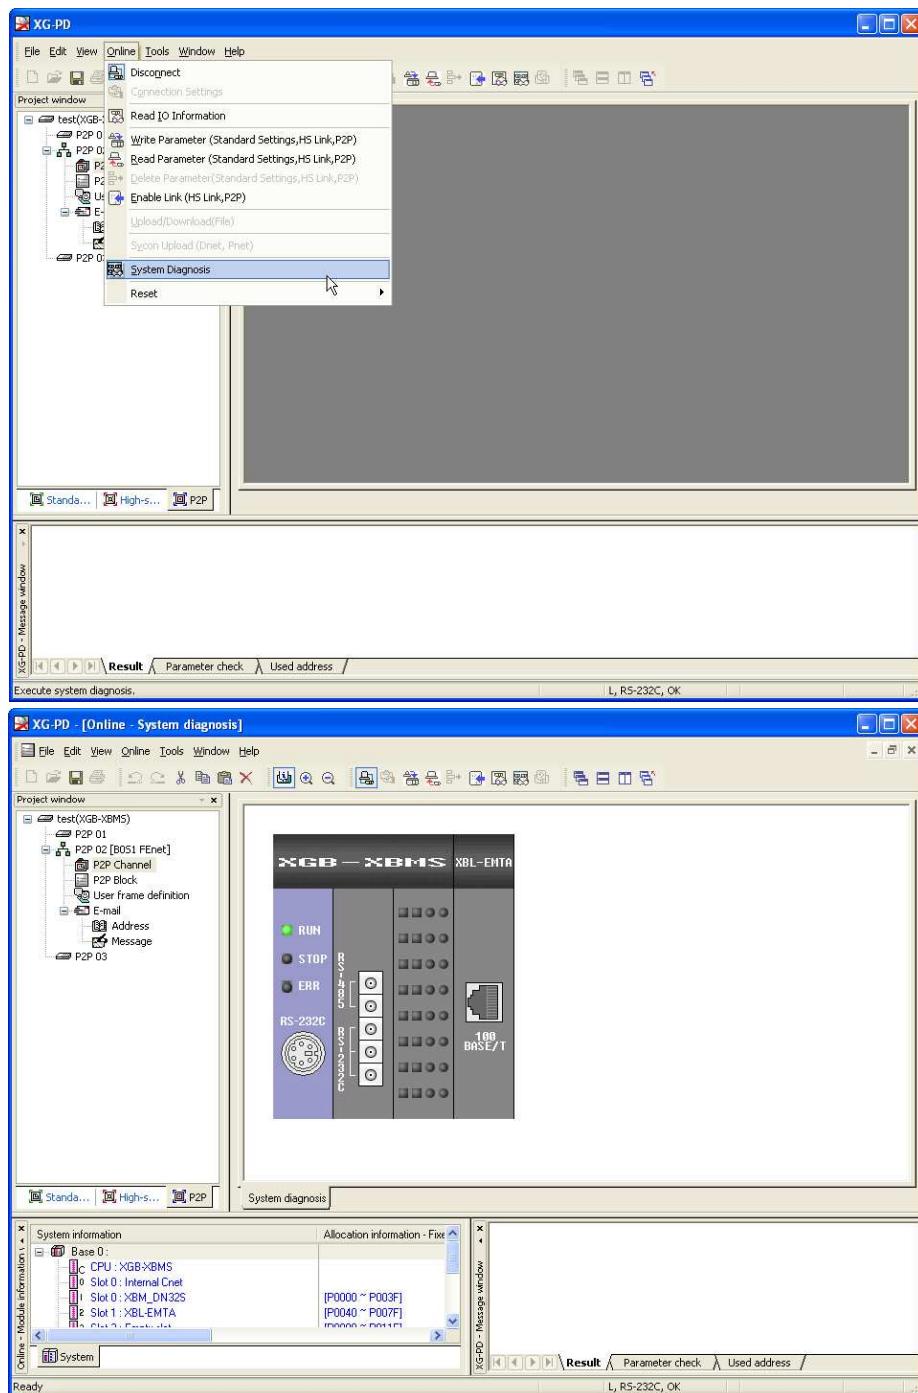

[Fig. 7-35] TCP user define frame client

- (1) TCP user define frame client provides a function sending the registered frame as the sending block to the user's assigned port.
- (2) In case of operation condition –‘ON’ in block, TCP user define frame client does  SYN, and send the registered frame in sending block to the port.
- (3) In case of UDP user define frame client does not do  SYN , it send the frame to the port when the operation condition is ‘ON’.

## 7.6 P2P Diagnosis Function

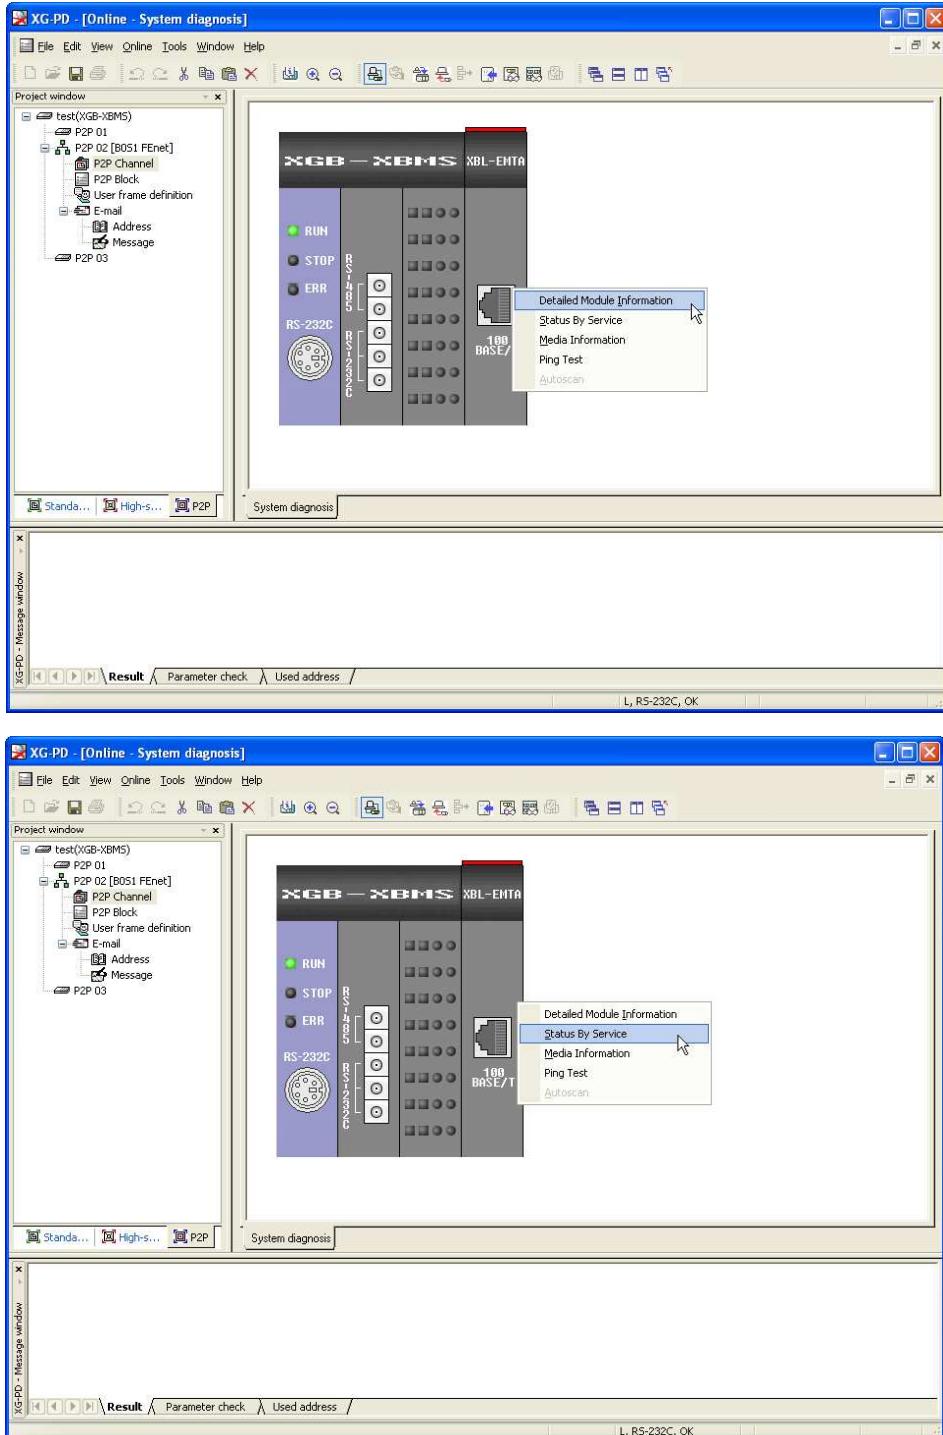

### 7.6.1 Service condition diagnosis using XG-PD

[Fig. 7-36] System diagnosis

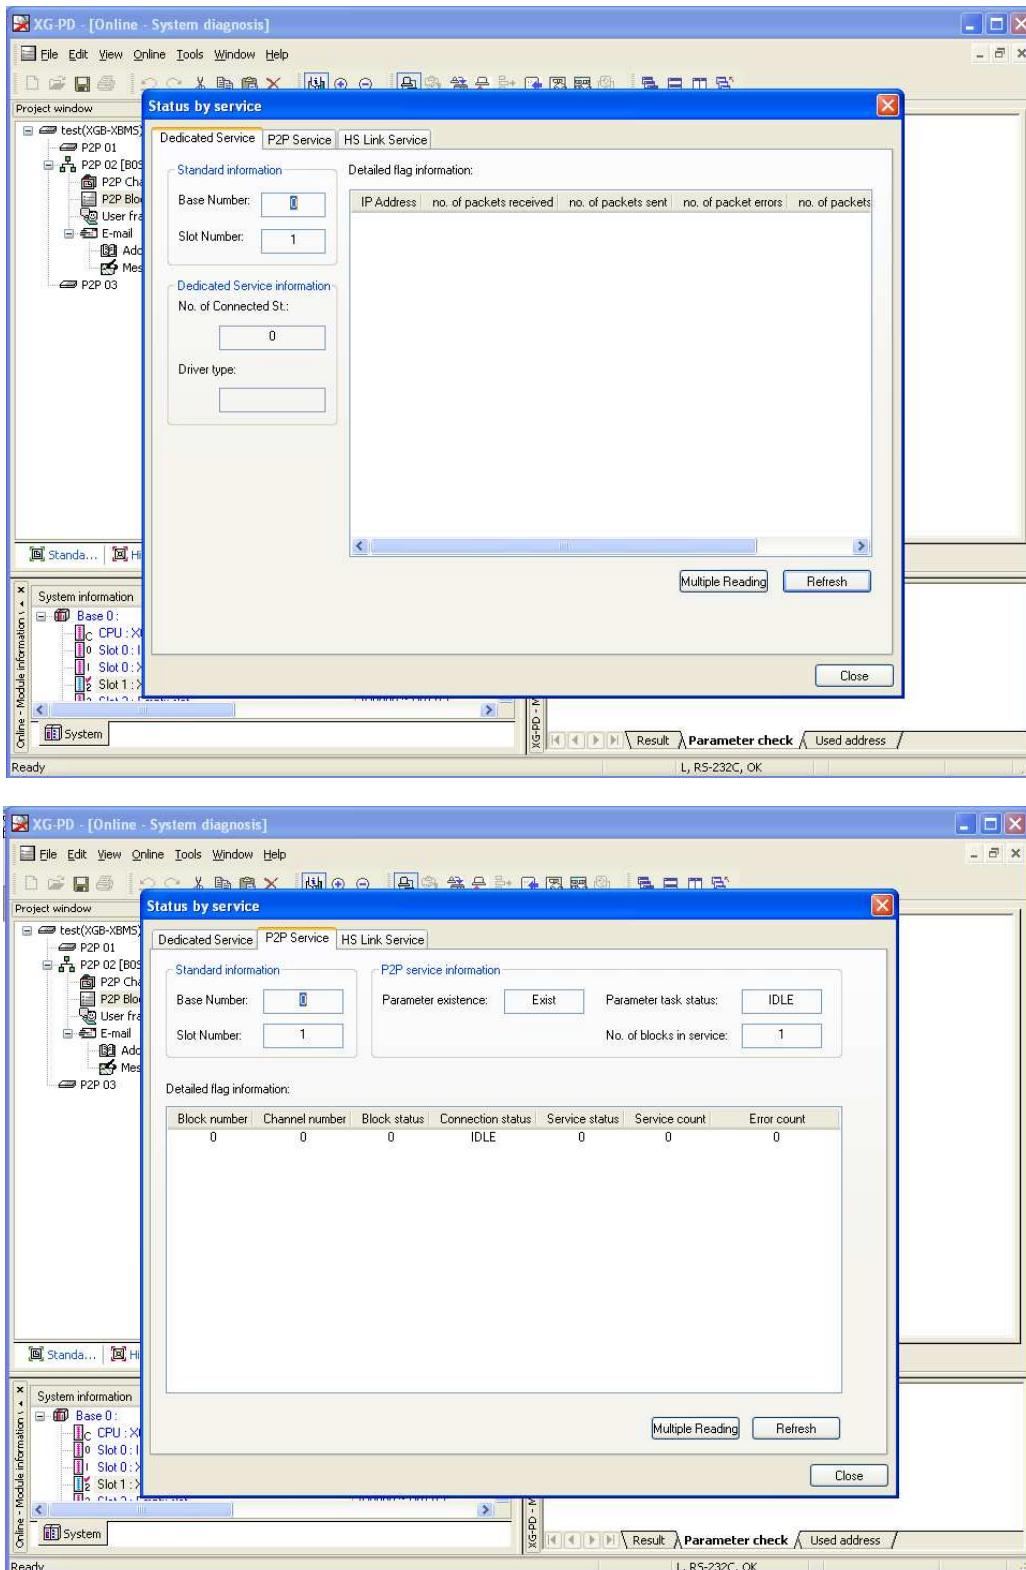

## Chapter 7 P2P Service

- (1) After connecting it through XG-PD, click System Diagnosis as the left screen of [Fig.7-36].
- (2) It shows present system picture as the right screen of [Fig. 7-36]

[Fig. 7-37] System diagnosis menu

- (3) Keep positioning on the module as the left screen of [Fig. 7-37] and click the right button of mouse.
- (4) Select Status By Service as the right screen of [Fig. 7-37], click it.

[Fig. 7-38] Status by service

- (5) It shows 'Status by service' window as the left screen of [Fig. 7-38].
- (6) Select P2P service tap, it shows P2P service condition as the right screen of [Fig. 7-38].

# Chapter 8 High Speed Link Service

## 8.1 General

### 8.1.1 General

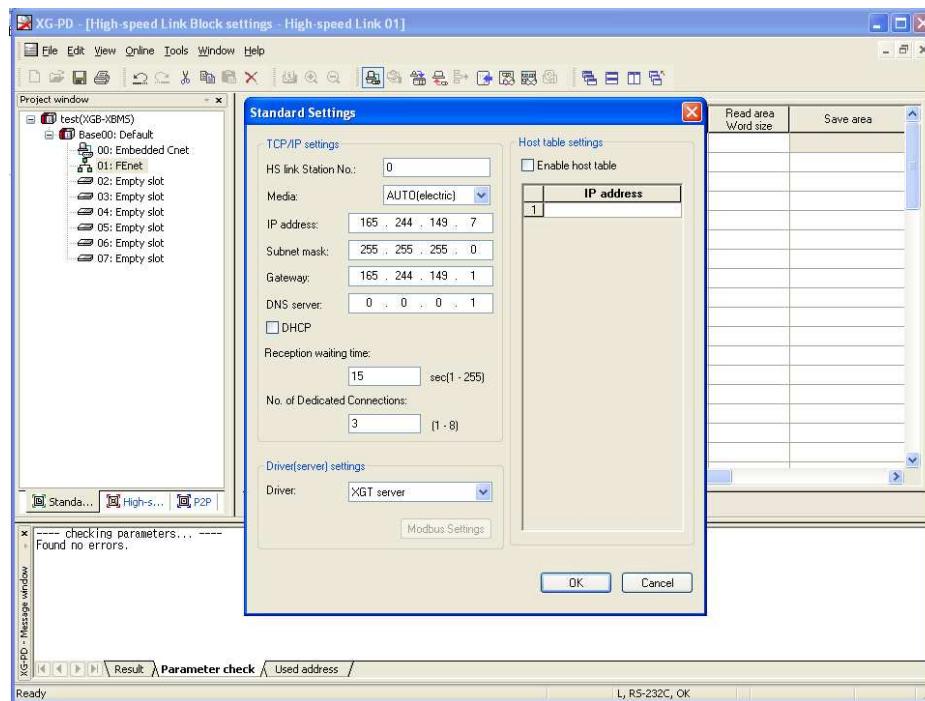

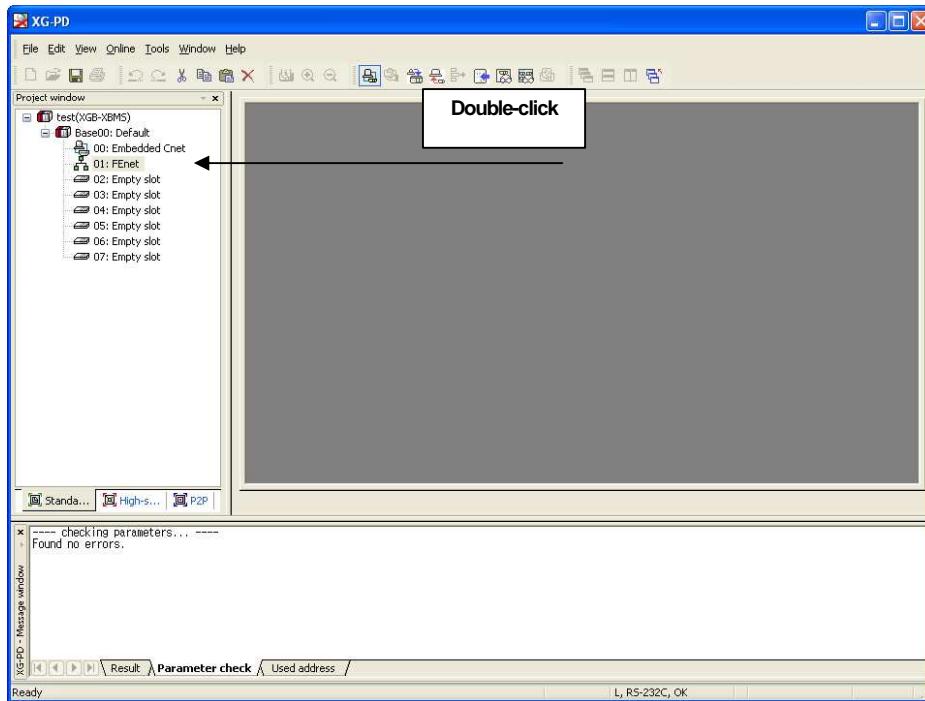

HS link service is a communication method between XGB Series and XGT Series PLC communication modules. This service provides that function does send/ receive data periodically by setting parameters. HS link service does send frame to Subnet Broadcast by using UDP protocol. Devices installed in same Subnet receives this Broadcast frame at the same time, it provides data treatment when one frame is registered in reception list.

Followings are HS link functions.

- (1) Setting HS link block
  - (a) Max. 64 blocks can be set in case of lots Send/Receive area.
  - (b) Max. 200 words can be set per 1 block.
- (2) Setting Period type
  - (a) User can set period of type by parameter
  - (b) User can set period of Send/Receive, 20ms~10sec.
- (3) Setting area of Send/Receive
  - (a) User can set area of Send/Receive by data block.
  - (b) Max. 32 blocks of each Send/Receive are available.
- (4) HS link information
  - (a) HS link operation condition can be check through Flag.
  - (b) Comfortable system diagnosis using XG-PD.

## 8.2 Setting HS link service

### 8.2.1 Basic parameter

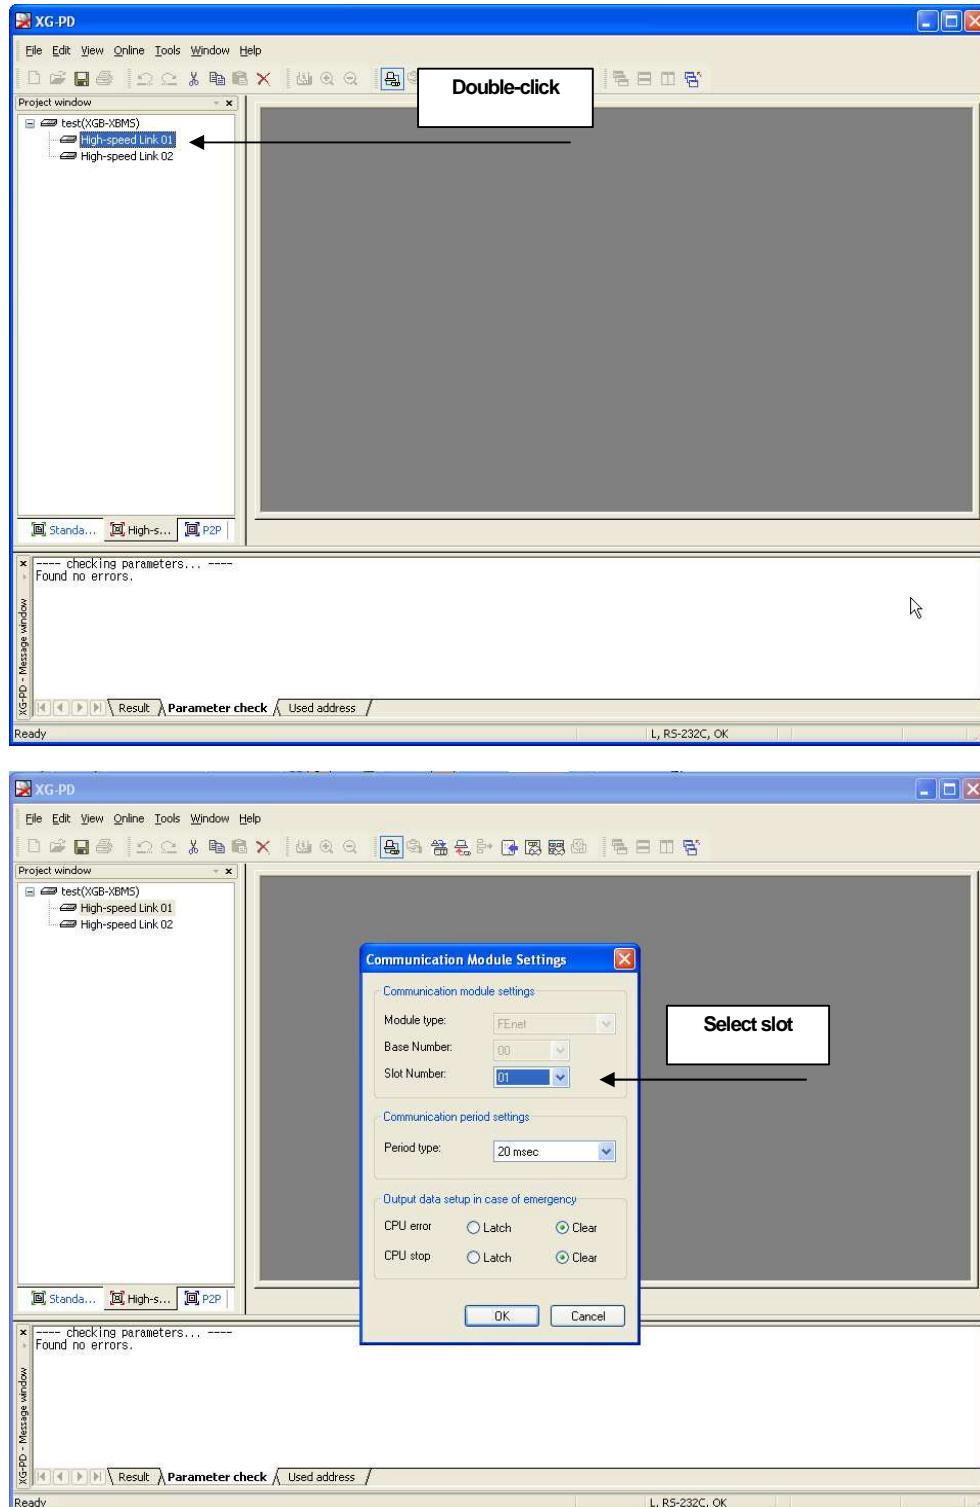

[Fig. 8-1] Setting basic parameter station no.

## Chapter 8 High Speed Link Service

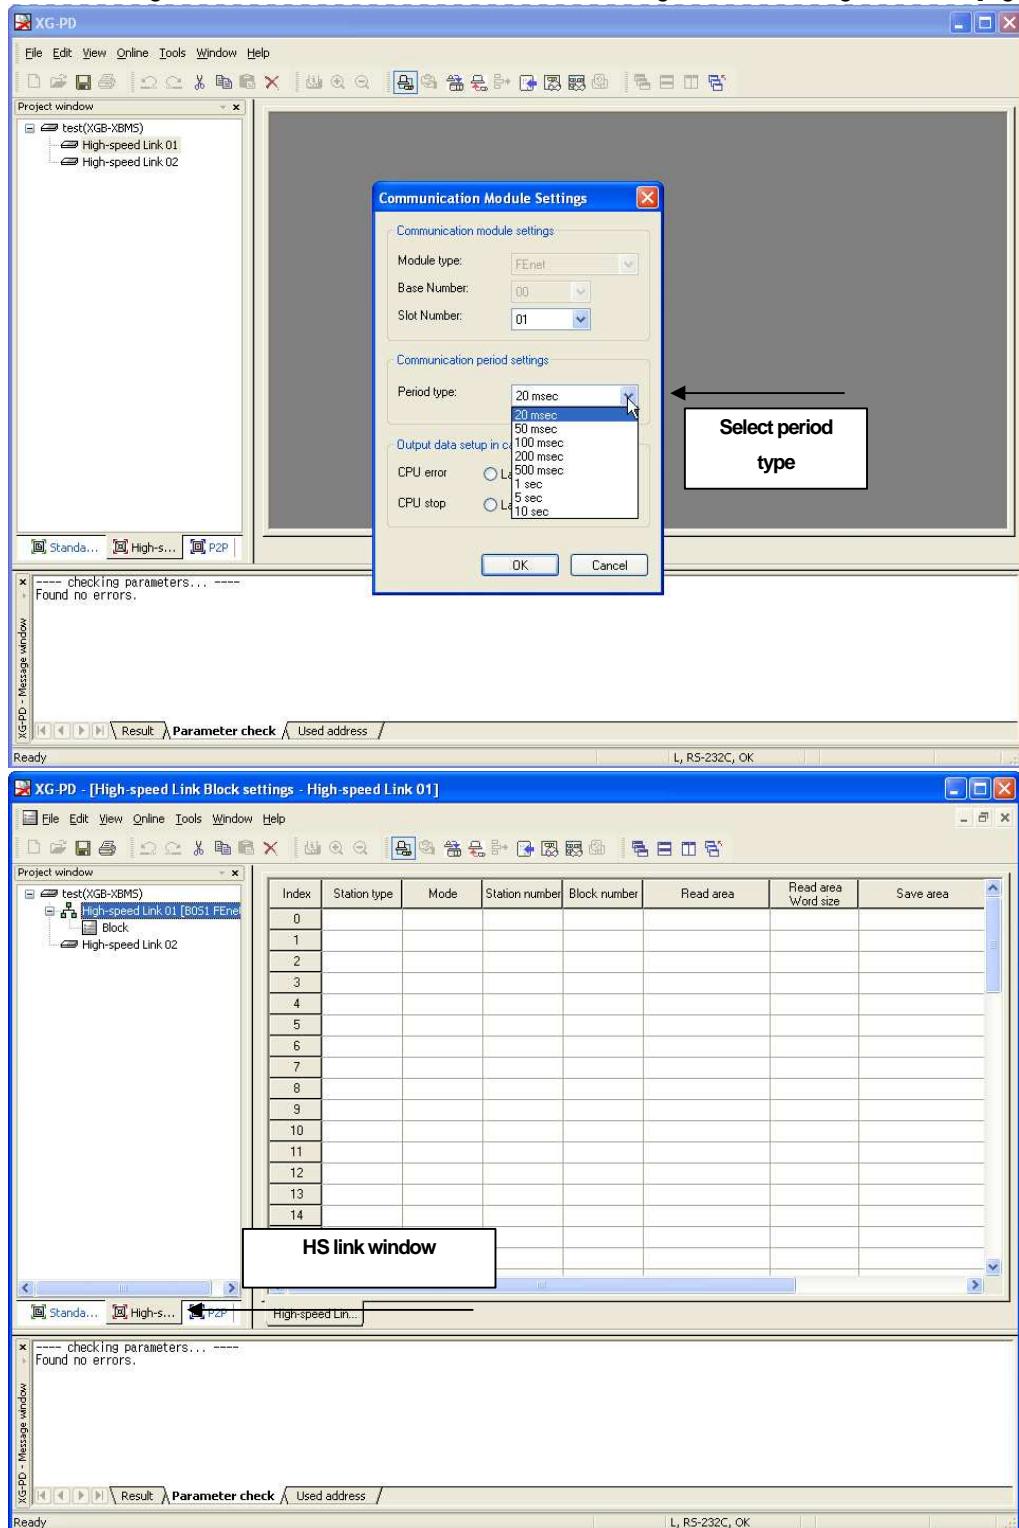

### 8.2.2 HS link parameter

#### (1) Setting communication module

[Fig. 8-2] Setting communication module in HS link parameter

- (a) Select HS link 01 or HS link 02 on project window as the left screen of [Fig. 8-2], double-click it.  
 (b) Double-clicking shows communication module information setting window as the right screen of [Fig.8-2].

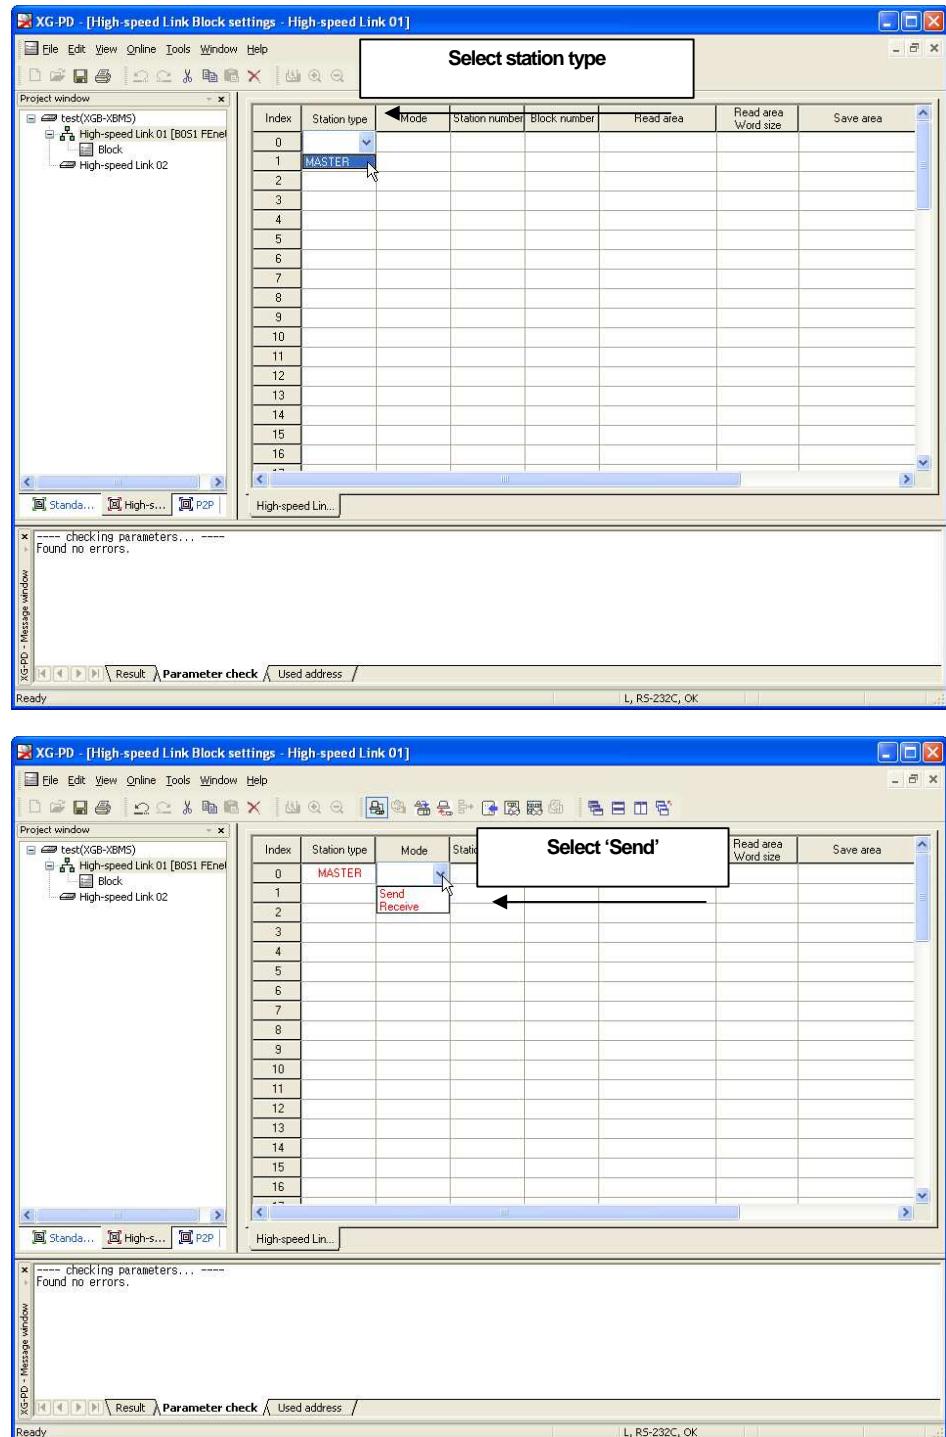

[Fig. 8-3] Finishing HS link communication module setting

- (c) Select the desired period of communication as the left screen of [Fig. 8-3].  
 (d) Clicking enter key shows block setting screen as the right screen of [Fig. 8-3].

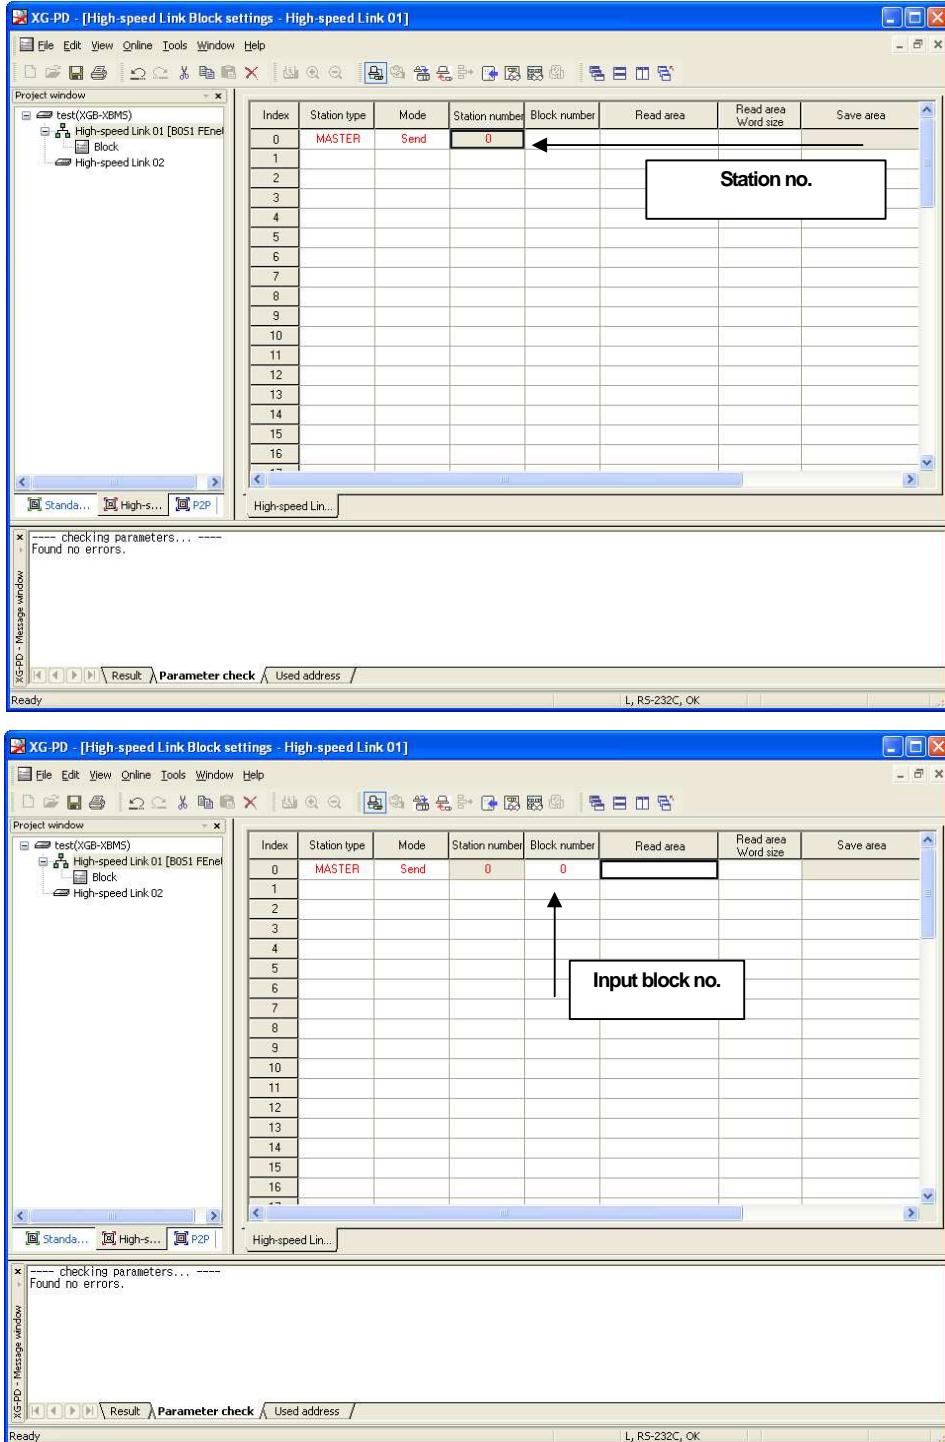

## Chapter 8 High Speed Link Service

### (2) Setting HS link sending block

[Fig. 8-4] Setting HS link Sending Block station type and mode

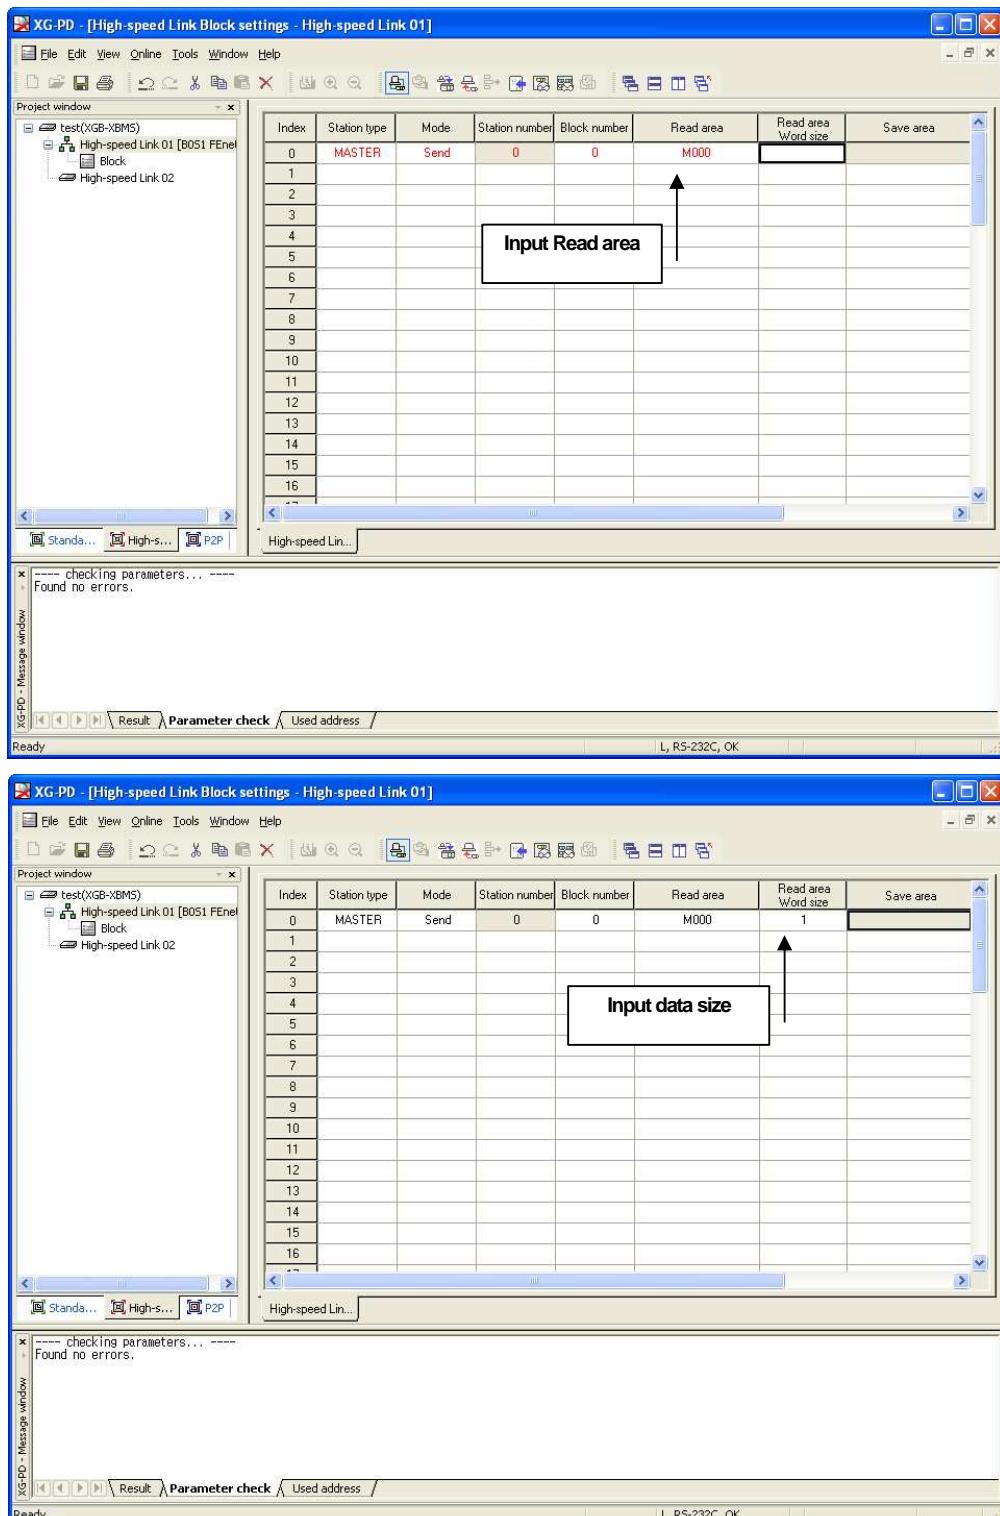

- Set station type 'MASTER' as the left screen of [Fig. 8-4].
- Select mode 'Send' as the right screen of [Fig. 8-3].

[Fig. 8-5] Setting HS link sending block station no. and block no.

- (c) When an user selects sending as the left screen of [Fig. 8-5], it sets setting station no. in basic parameter.
- (d) Input block no. as the right screen of [Fig. 8-5].

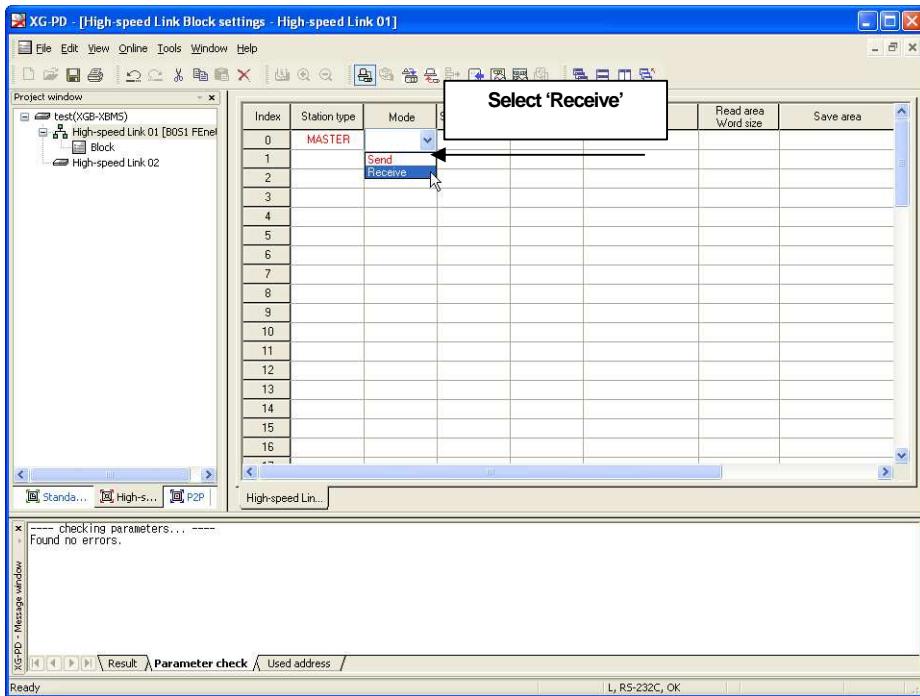

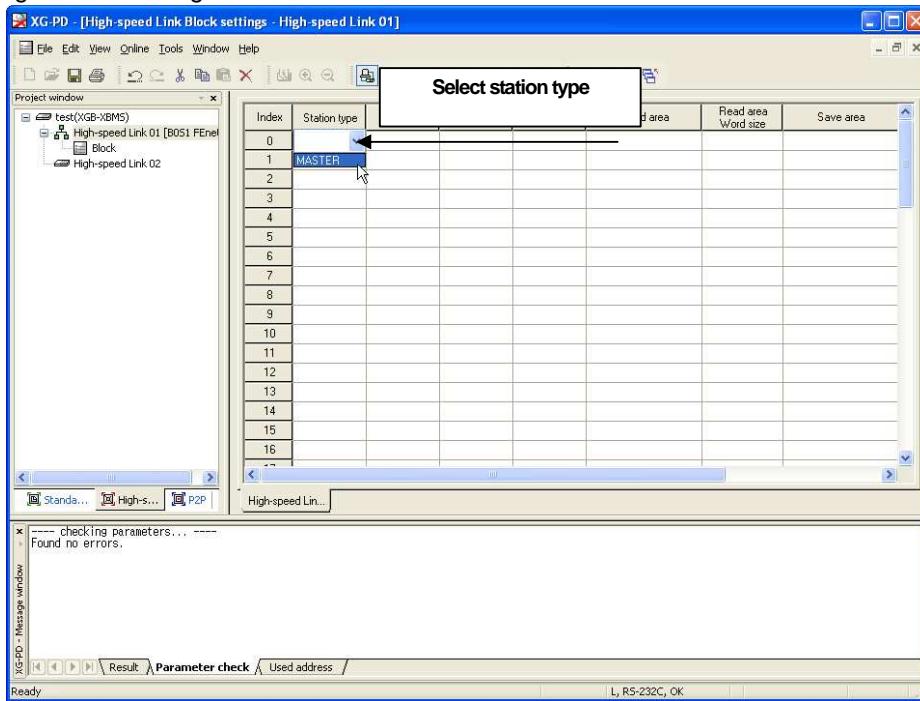

## Chapter 8 High Speed Link Service

[Fig. 8-6] Finishing HS link sending block data size setting

- (e) Input READ area as the left screen of [Fig. 8-6]. READ area is each area of XGB CPU module.
- (f) Inputting word size of READ area as the right screen of [Fig. 8-6] finishes setting sending block .

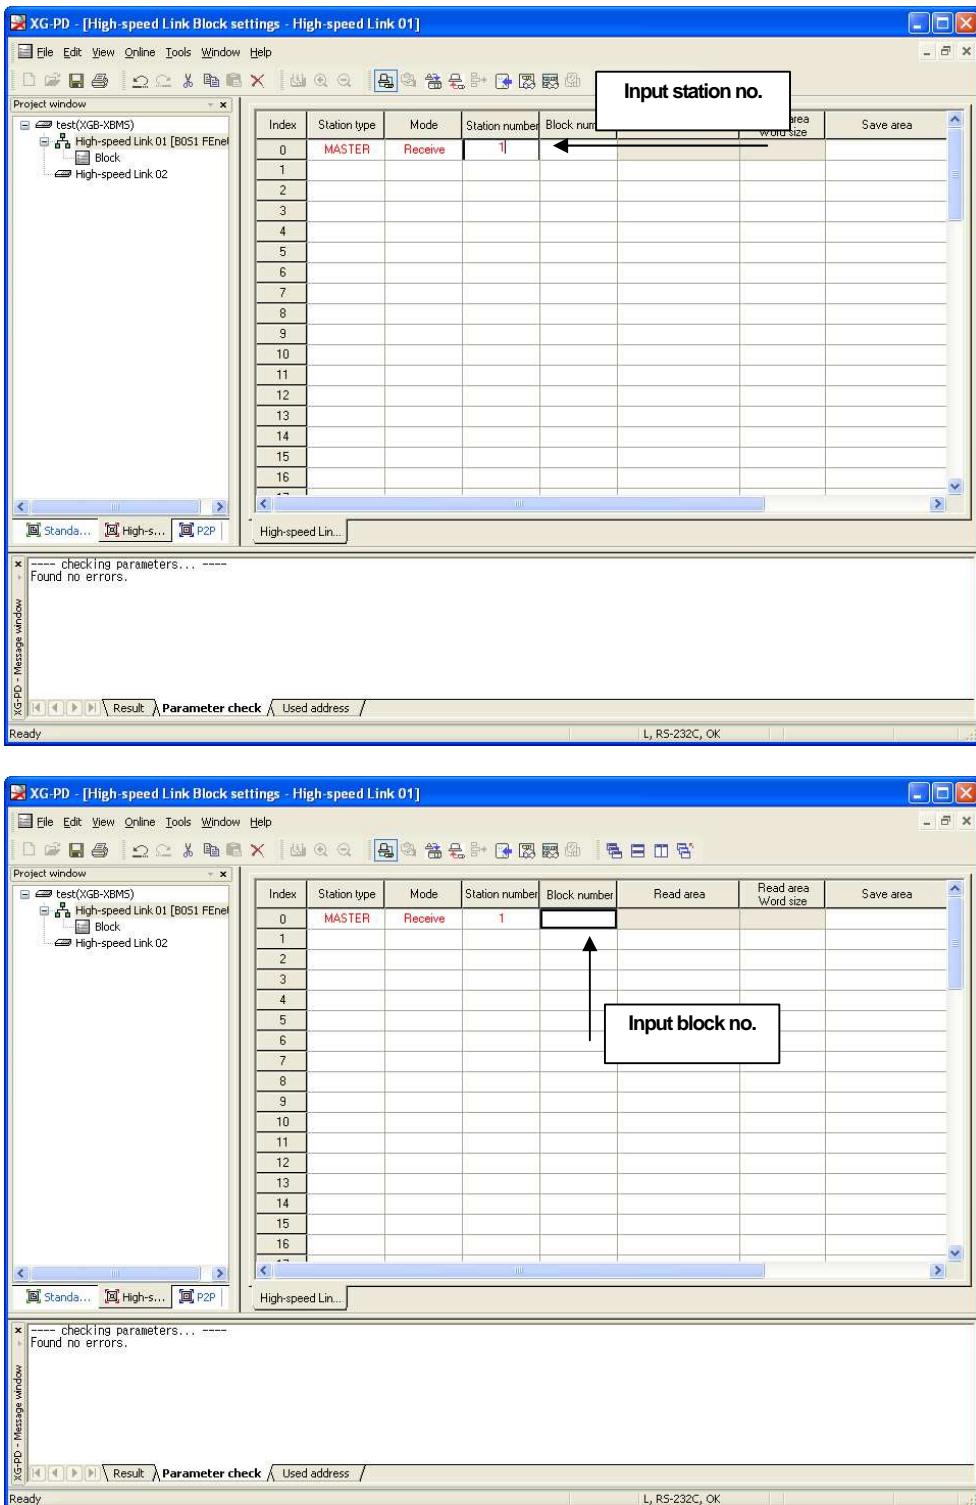

(3) Setting HS link receiving block

[Fig. 8-7] Setting HS link receiving block station type and mode

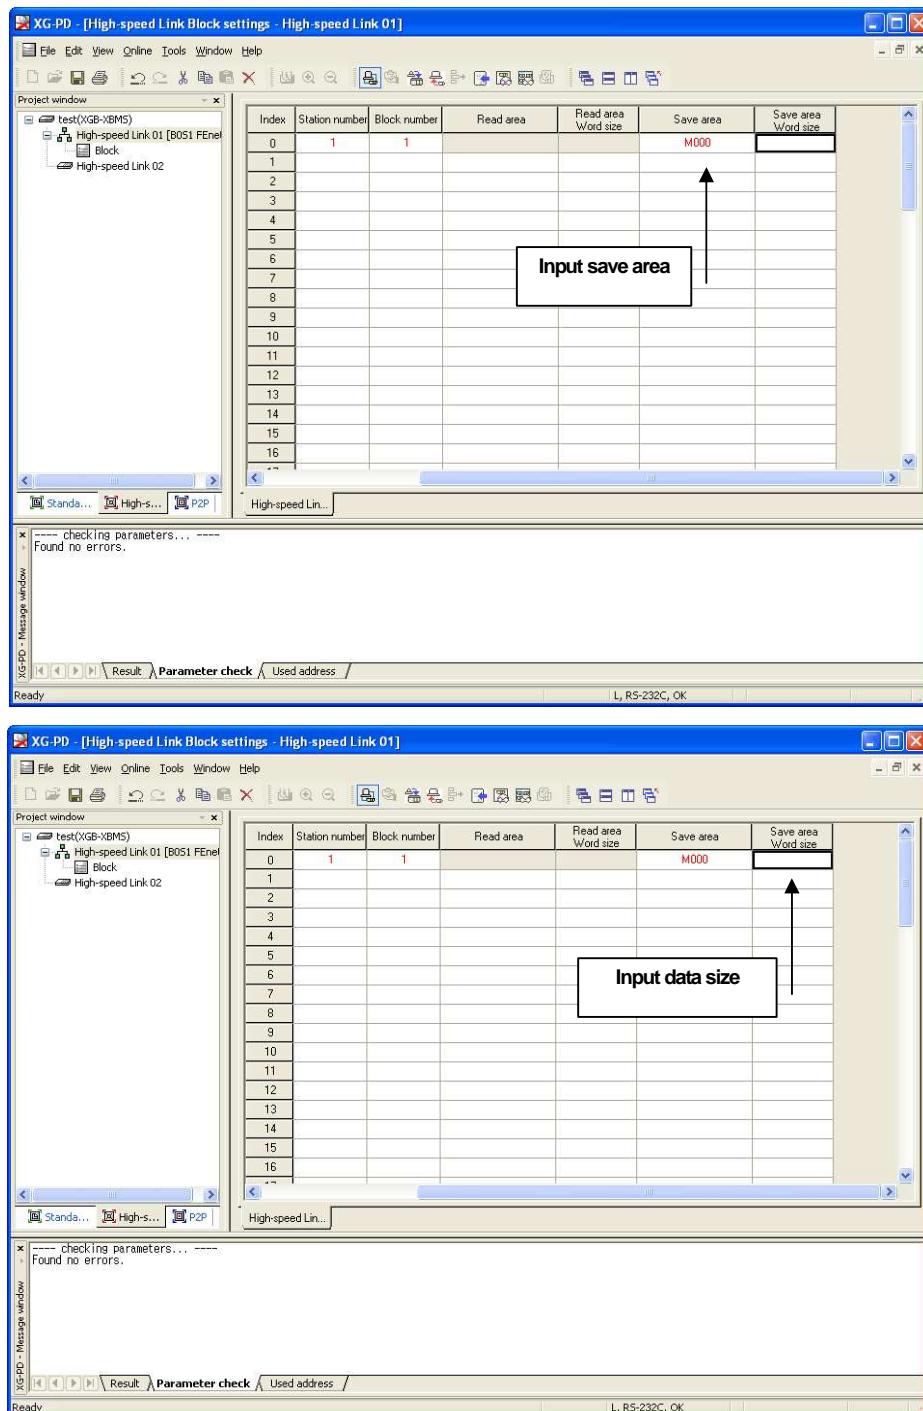

- (a) Set station type 'MASTER' as the left screen of [Fig. 8-7]
- (b) Select mode 'Receive' as the right screen of [Fig. 8-7]

## Chapter 8 High Speed Link Service

[Fig. 8-8] Setting HS link receiving block station no. and mode

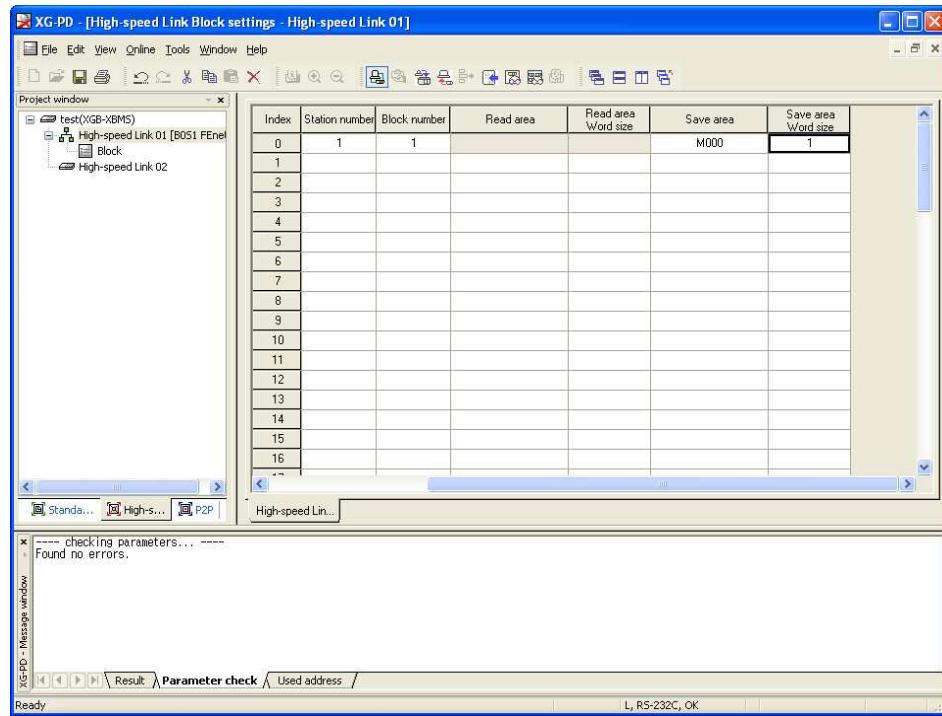

- (c) Input station no. as the left of [Fig. 8-8]. This station no. is the number of destination device sending the block.
- (d) Input block no. as the right screen of [Fig. 8-8]. It receives when the received frame is same as the block no.

[Fig. 8-9] Setting HS link receiving block station no. and mode

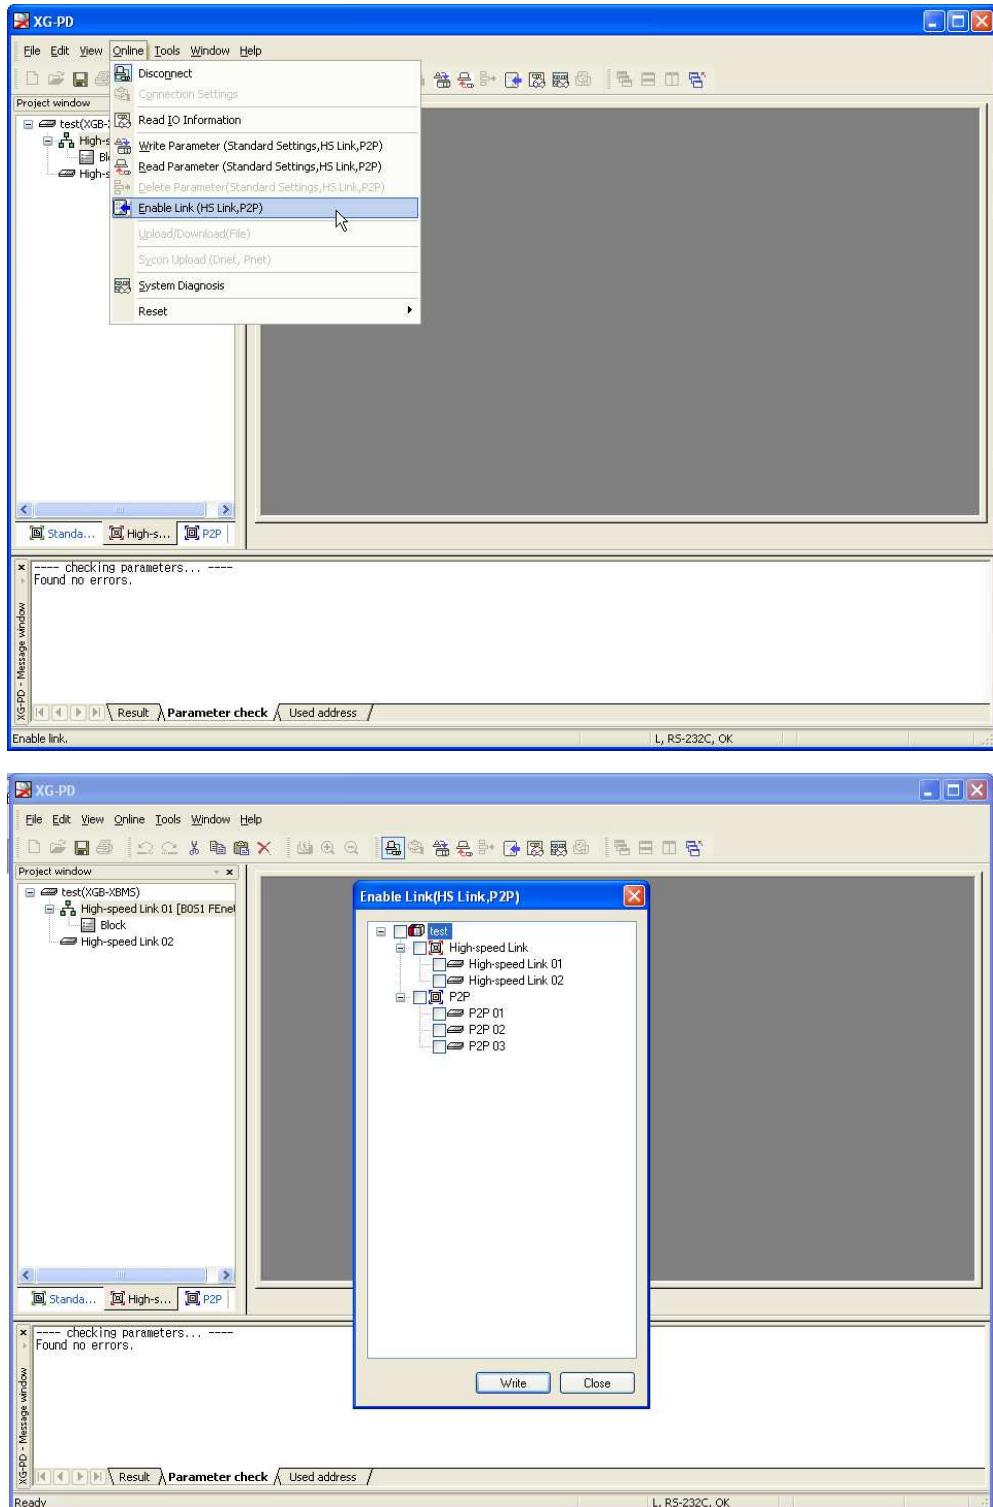

- (e) Input save area as the left screen of [Fig 8-9]. Save area is the data saving area when each area of XGB CPU module receives the frame of block no.
- (f) Inputting word size of Read area as the right screen of [Fig. 8-9] finishes setting receiving block.

## Chapter 8 High Speed Link Service

[Fig. 8-10] Finishing HS link receiving block data size setting

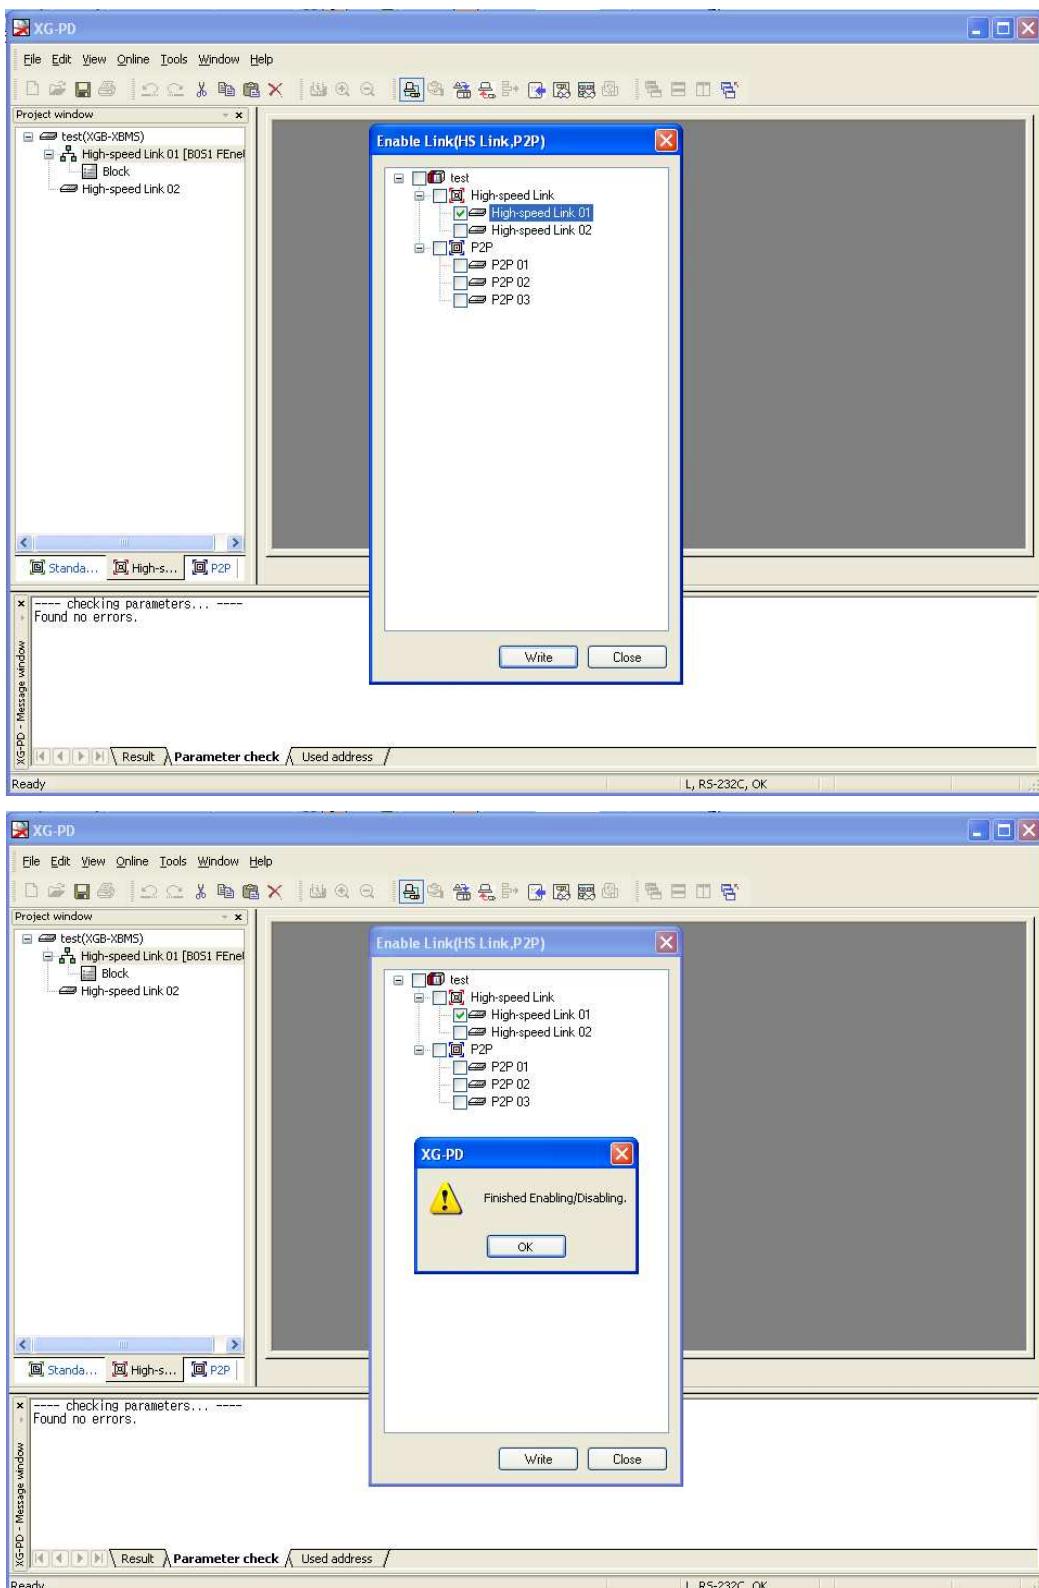

(4) HS link enable

[Fig. 8-11] HS link enable

- (a) Connecting it through XG-PD, click link enable on On-line menu.
- (b) Select HS link 01 or HS link 02.

## Chapter 8 High Speed Link Service

[Fig. 8-12] Finishing HS link enable

- (c) Click check box, then click write button.
- (d) When the message's outputted, clicking enter key starts HS link communication.

### 8.3 HS Link Flag

HS link service exchanges between over 2 stations of communication modules. To verify the reliability of read data from destination station through HS link, HS link service provides HS link information to user.

Communication module provides HS link information synthesizing receiving data by the time every some general interval. And it verifies if the HS link operates in good condition followed by the user's assigned parameter.

HS link service is composed of followings.

- (1) Run-Link (\_HSxRLINK): It shows communication network overall information,
- (2) Overall information of Link-Trouble (\_HSxLTRBL)
- (3) \_HSxSTATE, \_HSxTRX, \_HSxMOD, \_HSxERR: Individual information. It shows each communication status by 64 registered item in parameter

User can use upper information in Key word type for programming. And by using HS information monitor function, user can monitor the status of HS link. Operating many PLCs by using HS link, user should do the operation after verifying the reliability of Send/Receive data with understanding Run-Link, Link-Trouble, etc. [Table 8-13] shows HS link information function and definition.

#### 8.3.1 HS link flag classification

Classification	Run-Link	Link-Trouble	Send/Receive status	Operation Mode	Error	HS link status
Information type	Overall	Overall	Individual	Individual	Individual	Individual
Keyword name (x=HS Link No.)	_HSxRLINK	_HSxLTRBL	_HSxTRX[n] (n=0..64)	_HSxMOD[n] (n=0..64)	_HSxERR[n] (n=0..64)	_HSxSTATE[n] (n=0..64)
Data type	Bit	Bit	Bit-Array	Bit-Array	Bit-Array	Bit-Array
Monitor availability	Yes	Yes	Yes	Yes	Yes	Yes
Program usability	Yes	Yes	Yes	Yes	Yes	Yes

[Fig. 8-13] HS link flag

#### 8.3.2 HS link flag introduction

##### (1) Run-Link Flag

Overall information, it shows if HS link operates in good condition by the user's assigned parameter.

It keeps 'On' by the time of permitting 'Off' when it is 'On' once, and it is 'On' under following conditions.

- (a) When the permitting link is 'On'.
- (b) When all parameter registration item setting is normal.
- (c) When every data which is included in parameter registration item Send/Receive as the setting period.
- (d) Status of every setting destination station in parameter is RUN and at the moment there's no error.

## Chapter 8 High Speed Link Service

- (2) Trouble-Link Flag  
(a) It shows if HS link operates in good condition by the user's assigned parameter.  
(b) In the status of 'On' of Run-Link, if Run-Link is out of 'On' condition, it becomes 'On' and it does 'Off' when it recovers.
- (3) Synthesized status indication Flag of Block  
(a) It's an individual information showing operation status by HS link parameter registration item.  
(b) It indicates Max. 64 of HS link status by registration item and Max. registration numbers.  
(c) It shows the synthesized information of registration item by synthesizing individual information.  
(d) When the status of Send/Receive of the list is normal and operation mode is Run, no-error, it becomes 'On' and when it's out of upper condition, it does 'Off'.
- (4) Run Operation Mode Flag of Block Station  
(a) It's an individual information showing operation status by HS link parameter registration item.  
(b) It indicates Max. 64 of operation mode information by registration item and Max. registration numbers.  
(c) When the setting station in registration item is Run mode, the Bit becomes 'On'. When it's 'Stop/Pause/Debug' mode, it does 'Off'.
- (5) Normal communication indication Flag between block station  
(a) It's an individual information showing operation status by HS link parameter registration item.  
(b) It indicates Max. 64 of Send/Receive information by registration item.  
(c) When Send/Receive operates in good condition as the setting period, the Bit becomes 'On', if not it does 'Off'.
- (6) Operation Error mode Flag of block station  
(a) It's an individual information showing operation status by HS link parameter registration item.  
(b) It indicates Max. 64 of error information by registration item and Max. registration numbers.  
(c) Error defines that PLC does not execute user program normally. It means the operation of destination station is normal when it's 'Off'. It does the operation of destination station is abnormal.

### 8.3.3 HS link flag memory address

HS link flag is assigned in memory area (LAREA) of CPU.

Classification	Variables	Type	Device	Description
Run-Link	_HS1_RLINK	BIT	L00000	HS link No.1 all station normal operation
	_HS2_RLINK	BIT	L00260	HS link No.2 all station normal operation
Trouble-Link	_HS1_LTRBL	BIT	L00001	After _HS1RLINK ON, abnormal status
	_HS2_LTRBL	BIT	L00261	After _HS2RLINK ON, abnormal status
Status	_HS1_STATE000	BIT	L00020	Synthesized status of HS link block No.1 No.000
	~_HS1_STATE063	BIT	L0005F	~ Synthesized status of HS link block No.1 No.063
Mode	_HS2_STATE000	BIT	L00280	Synthesized status of HS link block No.2 No.000
	~_HS2_STATE063	BIT	L0031F	~ Synthesized status of HS link block No.2 No.063
	_HS1_MOD000	BIT	L00060	Run Operation mode of HS link block station No.1 No.000
	~_HS1_MOD063	BIT	~L0009F	~ Run Operation mode of HS link block station No.1 No.063
	_HS2_MOD000	BIT	L00320	Run Operation mode of HS link block station No.2 No.000~
	~_HS2_MOD063	BIT	~L0035F	Run Operation mode of HS link block station No.2 No.000

Classification	Variables	Type	Device	Description
Send/Receive	_HS1_TRX000 ~ _HS1_TRX063	BIT ~ BIT	L00100 ~ L0013F	Normal communication with HS link block No.1 No.000 ~ Normal communication with HS link block No.1 No.063
	_HS2_TRX000 ~ _HS2_TRX063	BIT ~ BIT	L00360 ~ L0039F	Normal communication with HS link block No.2 No.000 ~ Normal communication with HS link block No.2 No.063
Error	_HS1_ERR000 ~ _HS1_ERR063	BIT ~ BIT	L00140 ~ L0017F	Operation error mode of HS link block No.1 No.000 ~ Operation error mode of HS link block No.1 No.063
	_HS2_ERR000 ~ _HS2_ERR063	BIT ~ BIT	L00400 ~ L0043F	Operation error mode of HS link block No.2 No.000 ~ Operation error mode of HS link block No.2 No.063

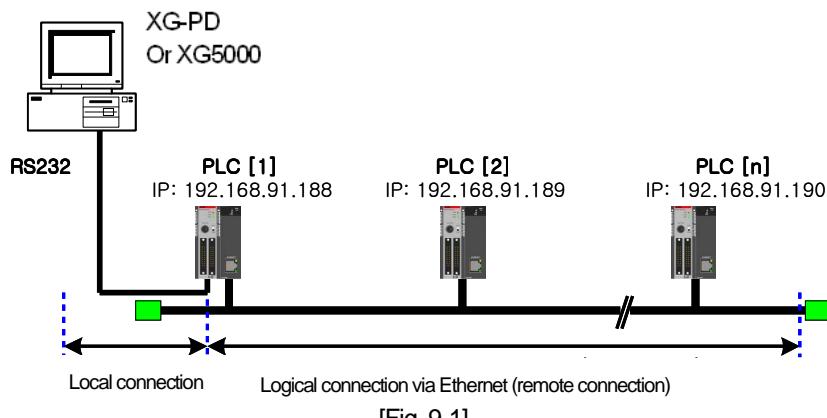

[Fig. 8-14] HS link flag address

# Chapter 9 Remote Communication Control

## 9.1 General

The remote communication function is a feature to program, download, debug and monitor at a distance on Ethernet-based network system without a physical connection to XG-PD software.

It is convenient for easy access to each device from a place without repositioning when network-connected devices are separated far. Communication service function creates the following logical path to attain its purpose.

[Fig. 9-1]

A network is supposed where RS-232C cable is connected to PLC #1, and PLC #1, PLC #2, PLC #N are connected with each other via Enet.

In order to access the contents of PLC #1 in [Fig.9-1], do local connection on XG-PD online menu, then access the contents of PLC #1. After finishing access, to access the contents of PLC #N, disconnect the access with PLC #1.

Then, select PLC # N (Station No: N, FEnet slot of PLC #1: 2), accessing it connects logical connection between RS-232C and Enet.

This status as processed identically to connection with RS-232C as moved to PLC #N station is available to execute all functions of programming, downloading, debugging and monitoring as in PLC #1.

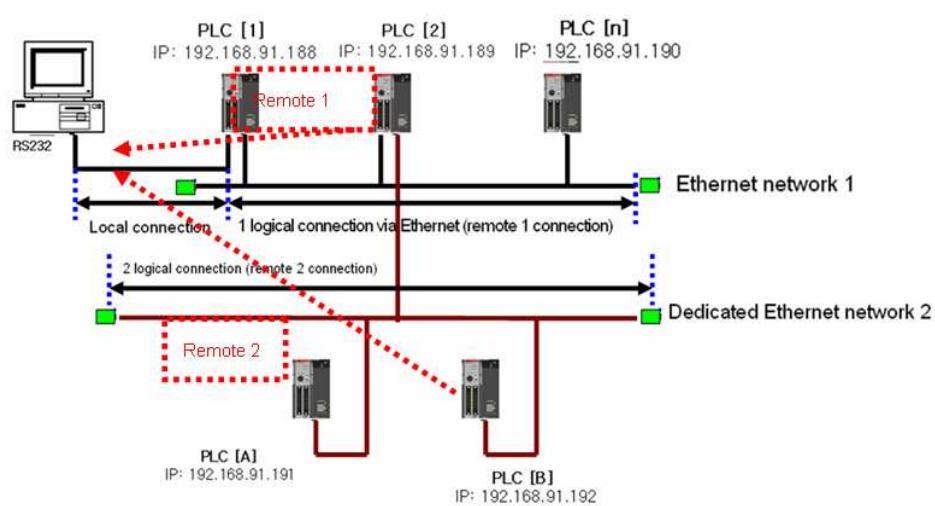

Furthermore, when a PC with operating XG-PD is installed with Enet module is installed, and it's connected to same network with the PLC, it can directly do remote 1 connection with PLC without local connection through RS-232C,

With this remote communication service, easy access to PLC position in the distance is available without moving thereto, which is useful for maintenance of PLC system.

## 9.2 XG-PD Setting and Connection

All PLCs connected with XGT network are available to connect each PLCs by XG-PD communication service.  
 XG-PD remote connection is composed of remote 1 connection (Hereafter, referred to as **remote 1**) and remote 2 Connection (Hereafter, referred to as **remote 2**)

Following shows remote1 and remote 2

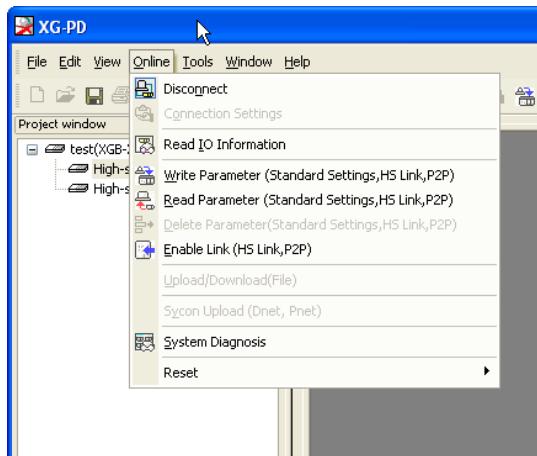

[Fig. 9-2] XG-PD remote connection

[Fig. 9-2] shows examples of remote1 (PLC B) and remote 2 (PLC E) in a system which composed of 2 networks.

## Chapter 9 Remote Communication Control

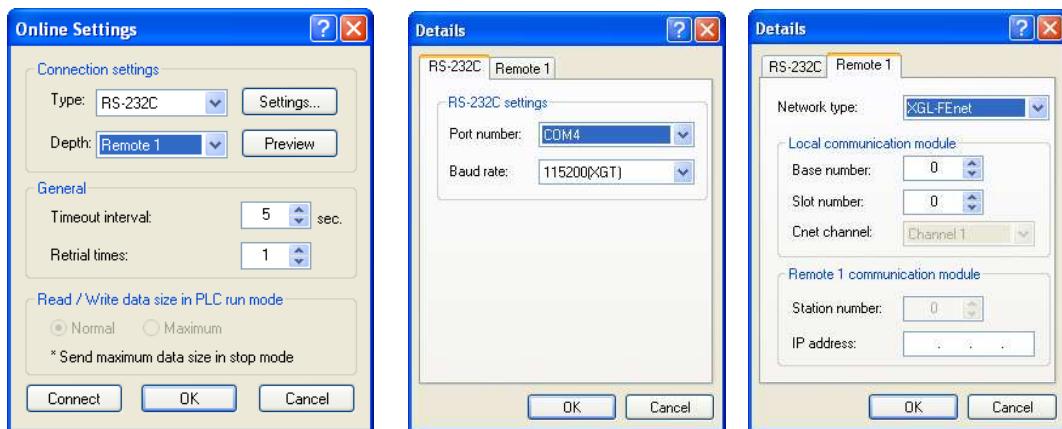

### 9.2.1 Remote 1 (RS-232C Cable)

For remote 1, XG-PD shall be in off-line status. In this status, select 'Option' from the project menu. It shows option dialogue box. Then, select 'Option' tap.

[Fig. 9-3] XG-PD remote connection option selecting

- (1) Connection type
  - (a) Select local connection type. [Fig. 9-3] shows a local connection by using RS-232C
  - (b) Select the communication port from user PC port.
  - (c) Following section explains the case of Enet user.
  - (d) Refer to the user manual of each communication module.
- (2) Connection depth
  - (a) It decides local or remote 1 or remote 2 for connecting PLC.
  - (b) Select remote 1.

[Fig. 9-4] XG-PD remote 1

(3) Connecting

- (a) Select Rnet, Fdnet, Cnet, FEnet, FDEnet by the remote 1 network type.
- (b) [Fig. 9-4] shows remote 1 through FEnet.
- (c) Select XGL-FEnet.

(4) Base No.

- (a) Assign Base No. that is installed with FEnet I/F module for remote connection.

(5) IP address

- (a) FEnet I/F module IP that installed in destination station PLC for remote 1 in network 1
- (b) Assign address.

(6) Slot

- (a) It shows the position of communication module which is connected to network 1 from local PLC by RS-232C.
- (b) In [Fig. 9-4], FEnet I/F module is installed in PLC A. Select the slot no.0.
- (c) Select enter on (b), then select connection online menu.
- (d) The status of finishing remote 1 is same as the logical connection status with local connection by moving RS-232C cable.
- (e) User can use all function of online menu. (But user can't do when the type of PLC and present open project CPU are not matched)

**Remark**

1) Caution for remote connection

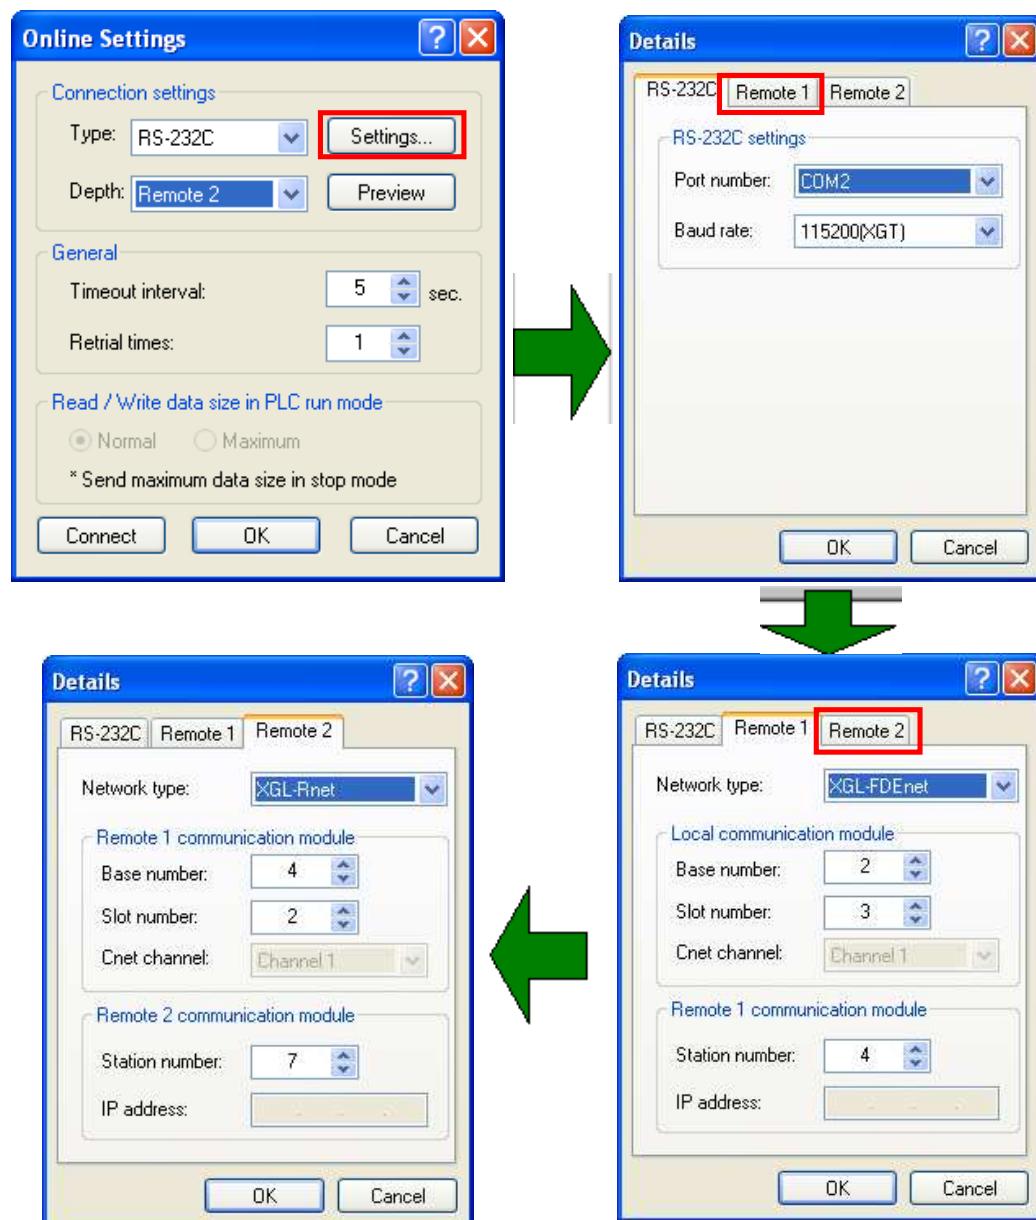

Do remote connection after programming which is for the destination CPU type. If the CPU type is not a right match, it only do limited functions, it can not do program upload, download and monitoring.

### 9.2.2 Remote 2 (RS-232C Cable)

Remote 2 sets connection stage/remote2 from project/option/connection option.

[Fig.9-5] shows remote 2, it's an example of connection to Fnet I/F module of PLC through FEnet I/F module of PLC B.

To do remote 2, at the connection stage of project/option/connection option, select remote 2, then it shows the following box.

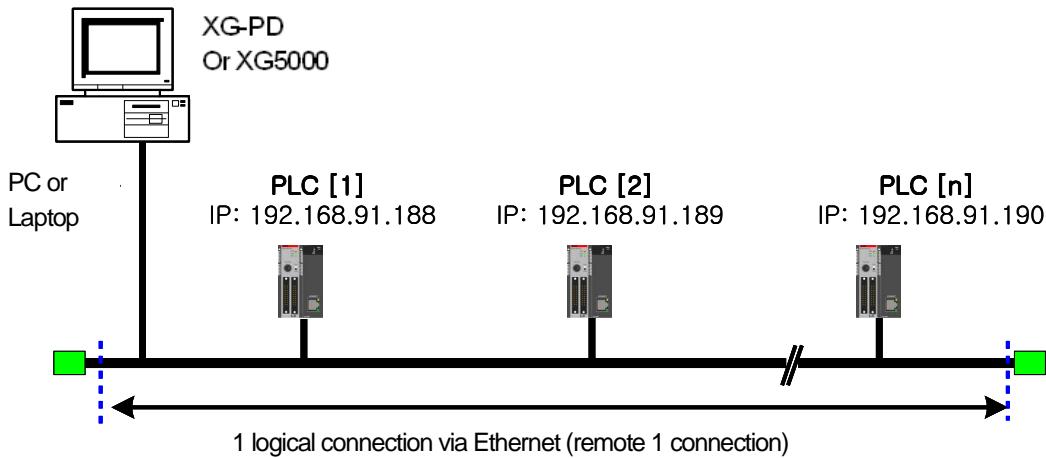

[Fig. 9-5] XG-PD remote 2

Other parts are same as the step of remote 1. Only the step of remote 2 explains.

- (1) Network type setting
  - (a) Select XGT FEnet by network remote 2.
  - (b) Network type of remote 1 and remote 2 have no relevance.
- (2) Slot No. setting
  - (a) In Network 2, the position of module which installed in remote 2 station PLC (PLC B).
  - (b) The position shall be inputted as Slot No.
- (3) The status of finishing remote 1 is same as the logical connection status with local connection by moving RS-232C. User can use all function of online menu.

### 9.2.3 Direct remote 1 Connection on Ethernet connecting PC

When a PC with operating XG-PD connects to PLC on network, remote 1 by Ethernet is available without connecting RS-232C to PLC CPU.

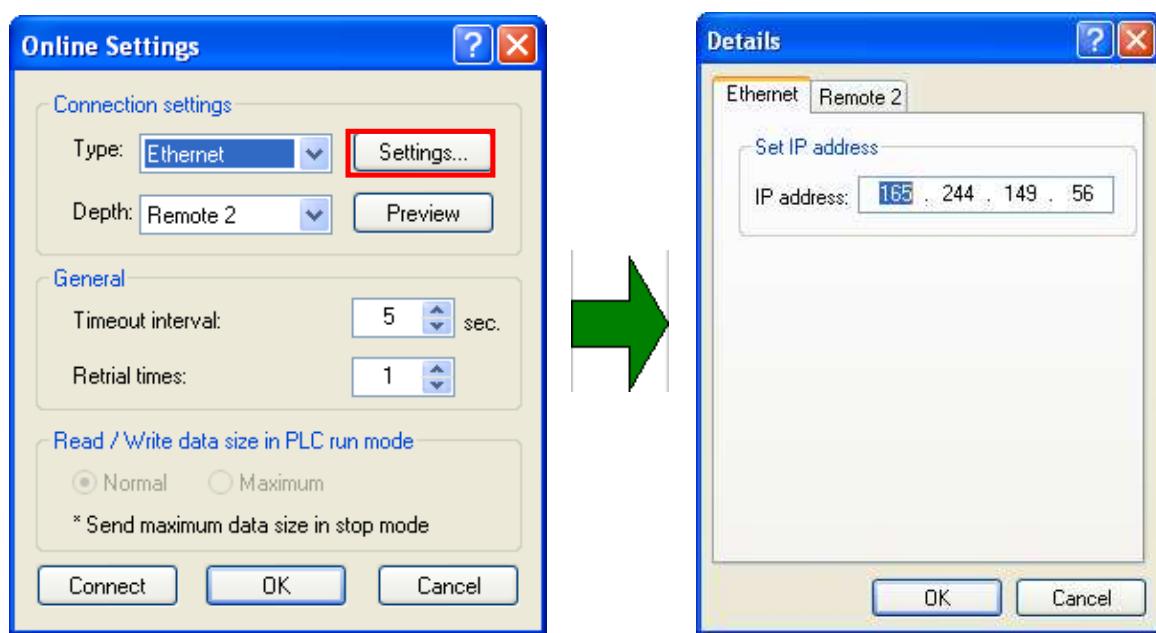

[Fig. 9-6] Remote 1 system through PC

[Fig. 9-6] shows the status that PC and PLC are connected by Ethernet. In this case, XG-PD can connect all PCs on network without using RS-232C. Local connection is not needed, remote 1 can be executed for all PLCs.

To execute direct remote 1 through Ethernet, select connection option and change the settings as following boxes.

## Chapter 9 Remote Communication Control

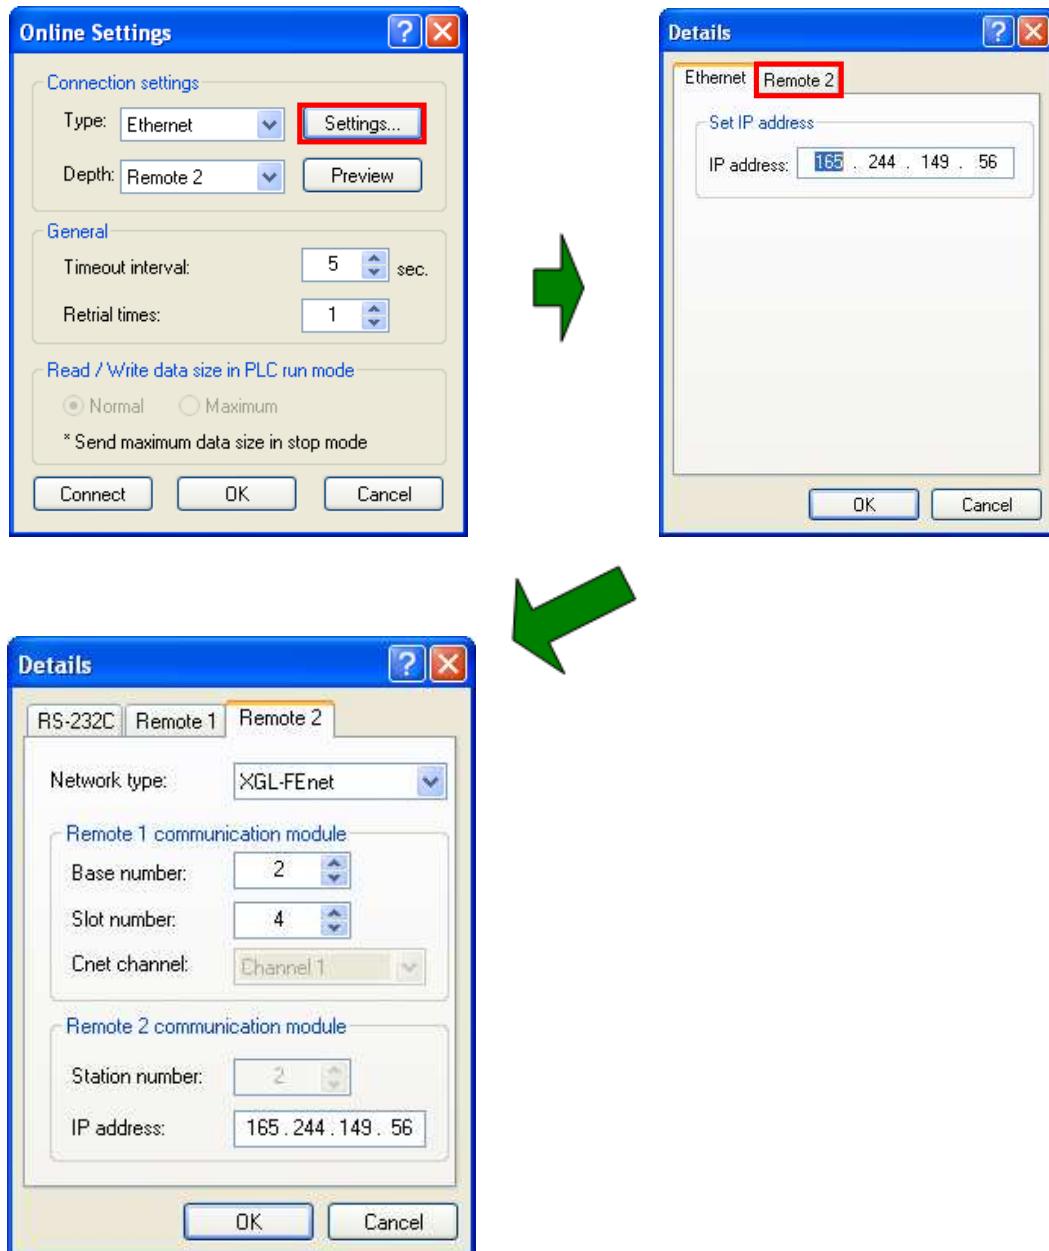

[Fig. 9-7] Direct remote 1 on PC

- (1) Connecting type
  - (a) Select connecting type. [Fig. 9-7] shows the Ethernet connection without using RS-232C. Select Ethernet.
- (2) Connection depth
  - (a) Decide remote 1 or remote 2 for the connection with PLC. In this case, select remote 1.
- (3) IP address
  - (a) Record IP address of FEnet I/F module for connection.
- (4) After(3), all steps are same as the steps of the case using RS-232C. Select enter at this status, select connection on online menu.

### 9.2.4 Direct remote 2 connection on Ethernet connecting PC

Remote 2 is available by using Enet, the step is same as that of remote 1. Example of setting connection option is as following.

[Fig. 9-8] Direct remote 2 from on PC

### Remark

- 1) Cautions for Remote 1 connection and Remote 2 connection
  - (1) Following menu item can't be available when XG-PD present open project and remote 1 and 2 connected CPU type are not well matched.
    - a) Program and Write each parameter
    - b) Program and Read each parameter
    - c) Monitor
    - d) Set Flash memory
    - e) Enable Link setting
    - f) I/O information
    - g) Force I/O
    - h) Skip I/O
  - (2) In case of programming by connecting XG-PD as remote 1 and 2, open the right project of connecting station and then execute connection.
  - (3) Remote connection provides only by remote 2. Over remote 2 is not available.

## Chapter 10 Troubleshooting

This chapter describes defects and errors that may occur in system operation, their causes and actions to take against.

If any error occurs on XGB Fast Enet I/F module, its related details can be checked through the procedures below.

Any discretionary or disassembly is not allowed.

Error Details	Actions
RUN LED 'Off' after module powered on	<ol style="list-style-type: none"> <li>Check if CPU unit's correctly connected with FEnet module.</li> <li>Check the upper and lower fixing lever position. Position close after connecting module.           <ul style="list-style-type: none"> <li>Connecting with CPU unit is not correct, the power can be supplied and module can't operate.</li> </ul> </li> <li>Check voltage (DC 24V) and capacity of power.           <ul style="list-style-type: none"> <li>When the consumption current of expansion module on CPU unit is over the rated capacity, module can't operate.</li> </ul> </li> <li>Check if communication module is correctly recognized through XG-PD.           <ul style="list-style-type: none"> <li>Check it by using system diagnosis.</li> </ul> </li> </ol>
I/F LED 'No-Flicker' or 'Off' after module powered on	<ol style="list-style-type: none"> <li>Check if CPU unit's correctly connected with FEnet module.           <ul style="list-style-type: none"> <li>Connecting with CPU unit is not correct, data can't be exchanged normally.</li> </ul> </li> <li>Check if communication module is correctly recognized through XG-PD.           <ul style="list-style-type: none"> <li>Check it by using system diagnosis.</li> </ul> </li> </ol>
TX/RX LED 'No-Flicker' or 'Off' after network connection	<ol style="list-style-type: none"> <li>Check communication cable and network status</li> <li>Check if RJ45 connector connected correctly</li> <li>Check if LINK LED flicker           <ul style="list-style-type: none"> <li>Connection of communication cable and RJ45 connector are not correct, Send/Receive is not available.</li> </ul> </li> </ol>
All LEDs 'On' after module powered on	Module malfunction, Repairs should be followed
Data Read/Write unavailable during dedicated service	<ol style="list-style-type: none"> <li>Check communication speed (Auto/10/100M-TX). Communication speed should be same as that of destination device.           <ul style="list-style-type: none"> <li>When the setting communication speed is as same or Auto on network, communication is available.</li> </ul> </li> <li>Check IP address setting. Valid IP address on network should be set.           <ul style="list-style-type: none"> <li>When IP address overlapped on network or invalid IP, communication is unavailable.</li> </ul> </li> <li>Check driver (Dedicated, Modbus TCP/IP) setting           <ul style="list-style-type: none"> <li>Same protocol with destination device should be used.</li> </ul> </li> <li>Check if IP of destination device is registered on host table.           <ul style="list-style-type: none"> <li>When host table is enable, IP address of destination is not registered, communication is not available.</li> </ul> </li> </ol>
Send/Receive unavailable during HS link service	<ol style="list-style-type: none"> <li>Check communication speed (Auto/10/100M-TX). Communication speed should be same as that of destination device.           <ul style="list-style-type: none"> <li>When the setting communication speed is as same or Auto on network, communication is available.</li> </ul> </li> <li>Check IP address setting. Valid IP address on network should be set.           <ul style="list-style-type: none"> <li>When IP address overlapped on network or invalid IP, communication is unavailable.</li> </ul> </li> </ol>

## Chapter 10 Troubleshooting

## **Warranty**

### **1. Warranty Period**

The product purchased will be guaranteed for a period of 18 months upon manufactured.

### **2. Warranty Coverage**

Against the defect found during the Warranty Period specified above, this product will be repaired or exchanged partially. However, please understand that such cases as described below will be excluded from the Warranty Coverage.

- (1) If the defect is caused by unsuitable condition, environment and treatment or other reason than specified in the user's manual.
- (2) If the defect is caused by other parts than LS product.
- (3) If the product is remodeled or repaired by others than LS or its designated service center.
- (4) If the product is used with other procedures than originally intended.
- (5) If the defect is caused by a reason unexpected under the scientific and technical standard when released from LS.
- (6) If the defect is caused by a natural calamity or fire which LS is not responsible for.

### **3. Since the warranty details above are to guarantee the PLC unit only, the customers are strongly recommended to use the product after due consideration of safety for system configuration or product application.**
